SAP C_S4EWM_2023 Dumps PDF To Gain Brilliant Result (2026)

On the one thing, our company has employed a lot of leading experts in the field to compile the C_S4EWM_2023 exam torrents, so you can definitely feel rest assured about the high quality of our C_S4EWM_2023 question torrents. On the other thing, the pass rate among our customers who prepared the exam under the guidance of our C_S4EWM_2023 Study Materials has reached as high as 98% to 100%. What's more, you will have more opportunities to get promotion as well as a pay raise in the near future after using our C_S4EWM_2023 question torrents since you are sure to get the C_S4EWM_2023 certification.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended

Warehouse Management Sample Questions (Q22-Q27):

NEW QUESTION # 22

Where do you enable opportunistic cross-docking in a decentralized EWM?

- A. In the product and the document type
- B. In the warehouse and the document type
- C. In the warehouse and the product
- **D. In the product and the warehouse process type**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Opportunistic cross-docking in SAP EWM allows goods to be moved directly from goods receipt to goods issue without intermediate storage, optimizing warehouse efficiency. This functionality is enabled at the product level and linked to the warehouse process type, which defines the process flow (e.g., putaway, picking, or cross-docking). In a decentralized EWM system, the configuration is maintained in the product master data (under the "Warehouse" tab) where you specify cross-docking relevance, and in the warehouse process type (SPRO: SCM Extended Warehouse Management > Cross-Docking > Opportunistic Cross-Docking) where the system determines whether a product can bypass putaway. The warehouse process type controls the movement type, and the product master defines eligibility, making option B the correct choice.

Options A, C, and D are incorrect because the document type and warehouse alone do not control this process-it's a combination of product-specific settings and process type logic.

NEW QUESTION # 23

In a decentralized EWM, what can be elements of an inspection rule? Note: There are 2 correct answers to this question.

- **A. Sample drawing procedure**
- B. Properties
- C. Work center
- **D. EWM stock type**

Answer: A,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In decentralized EWM with QM integration, inspection rules define quality checks. Option A ("Sample drawing procedure") is correct as it specifies sampling logic, and option B ("EWM stock type") is correct because it determines the stock to inspect (e.g., unrestricted), both configured in SPRO: SCM Extended Warehouse Management > Quality Management > Define Inspection Rules. Option C (work center) is production-related, and option D (properties) is too vague and not a standard element.

NEW QUESTION # 24

How do you control the physical inventory procedures which can be done in a specific part of the warehouse?

- A. You define a storage section and assign this to the physical inventory area.
- B. You assign bins directly to the physical inventory area
- C. You define a queue and assign this to the physical inventory area
- **D. You define an activity area and assign this to the physical inventory area**

Answer: D

NEW QUESTION # 25

To which of the following objects can you assign external process steps? Note: There are 2 correct answers to this question.

- **A. Warehouse process type**
- B. Delivery item type
- C. Packaging specification

- **D. Work center**

Answer: A,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

External process steps in SAP EWM's process-oriented storage control (POSC) are assigned to objects defining the process flow. Option B ("Warehouse process type") is correct as it links external steps (e.g., VAS) to the process, and option D ("Work center") is correct because it's where external steps are executed, both configured in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Process-Oriented Storage Control. Options A and C are not standard assignment objects for external steps.

NEW QUESTION # 26

What can you do with evaluation points?

- **A. Influence the search sequence of storage types, storage sections, and bin types.**
- B. Influence which items shall be picked first.
- C. Influence which warehouse order is assigned to a resource.
- D. Use them to measure the efficiency of your warehouse.

Answer: A

Explanation:

Evaluation points in SAP EWM are used to:

* **C. Influence the Search Sequence of Storage Types, Storage Sections, and Bin Types:**

* Evaluation points are part of storage type search logic.

* They assign priorities to storage types, sections, or bins to determine where goods are stored or picked from first.

Incorrect Options:

* A: Evaluation points do not influence resource assignment for warehouse orders.

* B: They do not directly influence picking priority; this is handled by warehouse task rules.

* D: Evaluation points are not used for measuring warehouse efficiency.
