2026 Latest TestValid AZ-400 PDF Dumps and AZ-400 Exam Engine Free Share: <https://drive.google.com/open?id=16lk-AZn641sQ3n7Nas94P3yDO90-4cEn>

First and foremost, we have high class operation system so we can assure you that you can start to prepare for the AZ-400 exam with our AZ-400 study materials only 5 to 10 minutes after payment. Second, once we have compiled a new version of the AZ-400 test question, we will send the latest version of our AZ-400 Training Materials to our customers for free during the whole year after purchasing. Last but not least, our worldwide after sale staffs will provide the most considerate after sale service on AZ-400 training guide for you in twenty four hours a day, seven days a week.

The Microsoft AZ-400 exam is divided into four main sections, each covering different aspects of DevOps solutions. The first section focuses on planning and implementing DevOps practices, including continuous integration and continuous delivery. The second section covers infrastructure and configuration management, including the use of tools like PowerShell and DSC. The third section focuses on monitoring and feedback, including the use of Azure Monitor and Application Insights. The final section covers security, compliance, and governance, including the use of Azure Security Center and Azure Policy.

The AZ-400 Exam covers a wide range of topics related to DevOps, including continuous integration and delivery, infrastructure as code, application deployment, monitoring and feedback loops, and more. AZ-400 exam is designed to test the candidate's ability to design and implement end-to-end DevOps solutions that are scalable, reliable, and efficient.

Free demo are available for AZ-400 study materials for you to have a try before purchasing, which will help you have a deeper understanding of what you are going to buy. You can find the free demo for AZ-400 exam braindumps in our website. If you are quite satisfied with the free demo, and want the complete version, just add it to the cart and pay for it. You will get the downloading link and password for the AZ-400 Study Materials within ten minutes, if you don't receive, you can ask for help from our service staff.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q236-Q241):

NEW QUESTION # 236

You are finalizing a release in GitHub.

You need to apply the following labels to the release:

Name

Email

Release v3.0

Release date

How should you complete the get command? To answer, select the appropriate options in the answer area.
 NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://git-scm.com/book/en/v2/Git-Basics-Tagging>

NEW QUESTION # 237

You have an Azure DevOps pipeline that is used to deploy a Node.js app.

You need to ensure that the dependencies are cached between builds.

How should you configure the deployment YAML? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

```
Inputs:
  keys: 'npm | "$(Agent.OS)" | package-lock.json'
  restoreKeys: |
    npm | "$(Agent.OS)"
  path: $(npm_config_cache)
  cacheHitVar: CACHE_RESTORED

- script: npm install
  condition: ne($(CACHE_RESTORED), 'true')
```

NEW QUESTION # 238

You plan to use a NuGet package in a project in Azure DevOps. The NuGet package is in a feed that requires authentication. You need to ensure that the project can restore the NuGet package automatically. What should the project use to automate the authentication?

- A. an Azure Active Directory (Azure AD) account that has multi-factor authentication (MFA) enabled
- B. an Azure Active Directory (Azure AD) service principalID18912E1457D5D1DDCBD40AB3BF70D5D
- **C. an Azure Artifacts Credential Provider**
- D. an Azure Automation account

Answer: C

Explanation:

The Azure Artifacts Credential Provider automates the acquisition of credentials needed to restore NuGet packages as part of your .NET development workflow. It integrates with MSBuild, dotnet, and NuGet(.exe) and works on Windows, Mac, and Linux. Any time you want to use packages from an Azure Artifacts feed, the Credential Provider will automatically acquire and securely store a token on behalf of the NuGet client you're using.

<https://github.com/Microsoft/artifacts-credprovider>

NEW QUESTION # 239

Your company has an on-premises Bitbucket Server that is used for Git-based source control. The server is protected by a firewall that blocks inbound Internet traffic.

You plan to use Azure DevOps to manage the build and release processes.

Which two components are required to integrate Azure DevOps and Bitbucket?

Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A. a self-hosted agent**
- B. service hooks
- **C. an External Git service connection**
- D. a deployment M group
- E. a Microsoft hosted agent

Answer: A,C

Explanation:

When a pipeline uses a remote, 3rd-party repository host such as Bitbucket Cloud, the repository is configured with webhooks that notify Azure Pipelines Server or TFS when code has changed and a build should be triggered. Since on-premises installations are normally protected behind a firewall, 3rd-party webhooks are unable to reach the on-premises server. As a workaround, you can use the External Git repository type which uses polling instead of webhooks to trigger a build when code has changed.

NEW QUESTION # 240

You use GitHub for source control and Azure Boards for project management. GitHub and Azure Boards are integrated.

You plan to create a pull request in GitHub.

You need to automatically link the request to an existing Azure Boards work item by using the text of AB#.

To which two elements can you add the text? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. description
- B. milestone
- C. title
- D. comment
- E. label

Answer: A,C

Explanation:

From a GitHub commit, pull request or issue, use the following syntax to create a link to your Azure Boards work item. Enter the AB#ID within the text of a commit message. Or, for a pull request or issue, enter the AB#ID within the title or description (not a comment).

<https://learn.microsoft.com/en-us/azure/devops/boards/github/link-to-from-github?view=azure-devops#:~:text=within%20the%20title%20or%20description>

NEW QUESTION # 241

.....

TestValid offers authentic and actual AZ-400 dumps that every candidate can rely on for good preparation. Our top priority is to give you the most reliable prep material that helps you pass the AZ-400 Exam on the first attempt. In addition, we offer up to three months of free Designing and Implementing Microsoft DevOps Solutions questions updates.
