In the scenario described, the sales managers at Universal Containers require a Gauge chart that not only shows the current percentage of opportunities in their pipeline but also indicates whether they are below or beyond their set targets. The appropriate widget parameters to achieve this visualization in Salesforce CRM Analytics (formerly known as Einstein Analytics) are:

Reference Line: This parameter is crucial for defining a specific target value on the gauge chart. It visually marks a point that represents the target goal, providing an immediate visual cue as to whether the current percentage is below or above this point.

Markers: Markers are used to represent and highlight specific values on the gauge chart. They can be utilized to emphasize the current percentage level of the pipeline, making it instantly visible how close or far the current value is from the reference line or target.

Conditional Formatting: This feature allows the chart to change color or style based on whether the current values meet, exceed, or fall below the target. It is a critical visual tool for quickly communicating performance against targets. Conditional formatting can be set to alter the appearance of the gauge's fill color based on whether the values are above, equal to, or below the reference line, thereby providing an intuitive visual representation of performance relative to targets.

The combination of these three parameters enables a highly effective visualization for sales managers to monitor their performance against key metrics and targets directly on their dashboards. This setup is aligned with Salesforce's best practices for creating meaningful and actionable insights within CRM dashboards, ensuring that users can easily interpret and react to the data presented.

For more details on configuring these parameters, you can refer to Salesforce documentation and specific Trailhead modules that cover dashboard creation and customization:

최신 Salesforce Consultant Analytics-Con-201 무료 샘플문제 (Q116-Q121):

질문 # 116

CRM Analytics consultant receives a new project from a client that wants to implement CRM Analytics. They do not currently have CRM Analytics but want guidance on how to ensure their users have the correct access.

They have 1,000 users with a small team of three people who will build both datasets and dashboards. An additional 15 people should be able to only create dashboards. The remaining users should only be able to view dashboards.

Which recommendation should the consultant give the client?

Which recommendation should the consultant give the client?

- A. Assign the app permissions "viewer", "editor", and "manager" to the three types of roles defined.
- B. Create and assign three new Salesforce profiles according to the three types of roles defined.
- C. Create and assign Salesforce permission sets according to the three types of roles defined.

정답: C

설명:

For a client implementing CRM Analytics with a variety of user roles, creating and assigning Salesforce permission sets is the most flexible and scalable solution. Here's why:

* Flexibility and Customization: Permission sets allow for specific access rights to be compiled and assigned based on user roles without altering their existing profiles.

* Scalability: As the organization grows or roles change, permission sets can be easily adjusted or reassigned to accommodate new requirements or users.

* Simplified Management: Managing access via permission sets simplifies the administration of user rights, making it easier to ensure that each group has the appropriate level of access.

질문 # 117

A data architect wants to use a recipe transformation to implement row level security based on role hierarchy in Salesforce.

Which transformation should the architect use to level the dataset hierarchy?

- A. Aggregate
- B. Join
- C. Flatten

정답: C

질문 # 118

Cloud Kicks uses CRM Analytics for its sales reporting. A new manager needs access to CRM Analytics to see specific dashboards.

How should the system administrator give access to the Analytics

Studio app in the App Launcher?

- A. Change the profile of the user to one that has access to the Analytics Studio.
- B. Share the Analytics Studio app to the user's profile.
- C. Assign the CRM Analytics User permission set to the manager's user.

정답: C

질문 # 119

A team of CRM Analytics developers has been working on an existing recipe to add new derived fields. The edited version has been failing ever since, and management is requesting that the dashboard show refreshed data while they work on the edits.

How can the developers add new fields while keeping the dataset refreshed?

- A. A recipe for the new fields and when that is successful, add it to the existing recipe as a join node.
- **B. Clone the existing recipe to add fields and roll back the original recipe to the last working version.**
- C. Refresh the dataset after working hours to avoid the edited version from failing.

정답: B

설명:

When faced with the need to continue refreshing data while developing new features in a recipe, the best practice is:

* Clone the Existing Recipe: By cloning the recipe, developers can experiment with adding new fields and transformations without affecting the production data flow. This allows for testing and development in a sandbox-like environment.

* Roll Back to a Stable Version: Rolling back the original recipe to the last stable version ensures that the production dashboards continue to receive refreshed data, maintaining business operations without disruption.

This approach not only ensures data continuity but also provides a safe environment to address any issues that may arise from new developments.

질문 # 120

Universal Containers (UC) is looking to create a dashboard for whitespace analysis. UC wants to view a particular customer and see what similar customers have bought.

Which recipe transformation is helpful for the consultant to use while creating the dataset?

- **A. Cluster**
- B. Predict Missing Values
- C. Timeseries Forecasting

정답: A
