

Newest Nutanix NCP-DB Practice Questions in PDF Format for Quick Preparation

What's more, part of that TestSimulate NCP-DB dumps now are free: https://drive.google.com/open?id=10PZzMJC8pPuN6zV_XdG5L5ACHnoDXxEH

Do you want to pass NCP-DB certification exam easily? Then it is necessary to have TestSimulate NCP-DB exam certification training materials. TestSimulate NCP-DB test training materials are summarized by IT experts with constant practice, which is the combination of NCP-DB Exam Dumps and answers, and can't be matched by any NCP-DB test training materials from others. TestSimulate will take you to a more beautiful future.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Monitor Alerts and Storage Usage Within an NDB Implementation: It is all about monitoring alerts and management of storage usage.
Topic 2	<ul style="list-style-type: none">• Deploy and Configure an NDB Solution: This topic discusses how to deploy, configure, and NDB Instance.
Topic 3	<ul style="list-style-type: none">• Administer an NDB Environment: While focusing on the administration of an NDB environment, this topic focuses on managing NDB profiles, applying procedural concepts, and managing networks in NDB. Lastly, the topic explains sub-topics of managing access controls in NDB and identifying how to use NDB APIs and CLI.
Topic 4	<ul style="list-style-type: none">• Operate and Maintain an NDB Environment: Application of procedural concepts to register database server, provision databases, and test and publish database patches. Additionally, the topic explains the right method to apply Linux OS patches. Lastly, it delves into databases and troubleshooting of NDB operations.

2026 Nutanix NCP-DB: Newest Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Exam Vce

With the help of the NCP-DB practice exam questions and preparation material offered by TestSimulate, you can pass any NCP-DB certifications exam in the first attempt. You don't have to face any trouble, and you can simply choose to do a selective NCP-DB brain dumps to pass the exam. We offer guaranteed success with NCP-DB Questions on the first attempt, and you will be able to pass the NCP-DB exam in short time. You can always consult our NCP-DB certified professional support if you are facing any

problems.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q32-Q37):

NEW QUESTION # 32

What does an NDB compute profile contain?

- A. VLAN that the new database server VM will use.
- B. Windows domain name (FQDN), domain user, and password.
- C. vCPUs, cores per vCPU, and the amount of memory for the database server VM.
- D. An image of the database and operating system generated from the registered database server VM.

Answer: C

Explanation:

An NDB compute profile defines the CPU and memory resources for the database server VMs that are provisioned using NDB. It does not include any information about the network, domain, or software of the database server VMs. Those are specified in separate profiles, such as network profile, domain profile, and software profile.

NEW QUESTION # 33

NDB sends alert notifications using the configurations that were pulled from the cluster and auto-populated during the first configuration. It has been required to use a dedicated server.

Which configuration should be changed?

- A. IDP configuration in Admin Center IAM page
- B. SMTP Server in NDB Service
- C. SNMP configuration in Prism Central
- D. Alert Email configuration in Prism Element

Answer: B

Explanation:

NDB sends alert notifications using configurations auto-populated from the cluster during the initial setup, typically relying on default SMTP settings. If a dedicated SMTP server is required (e.g., for security or compliance), the administrator must change the SMTP Server configuration in NDB Service. This is configured under the NDB Admin Center, where the administrator can specify the dedicated SMTP server's details (e.g., hostname, port, credentials, and security settings like TLS/SSL).

Other options are incorrect:

- * A. IDP configuration in Admin Center IAM page: Identity Provider (IDP) settings are for authentication, not email alerts.
- * B. Alert Email configuration in Prism Element: Prism Element manages cluster alerts, not NDB- specific email settings.
- * D. SNMP configuration in Prism Central: SNMP is for network monitoring, not email notifications.

Thus, the verified answer is C, reflecting NDB's alert notification setup.

NEW QUESTION # 34

An administrator needs the ability to clone a source database to a point in time.

What is the lowest log frequency in minutes that can be configured in the Era IJI for log catchup operation?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The log frequency in the Era IJI for log catchup operation can be configured to as low as 5 minutes. This allows the system to capture changes to the database at a high frequency, enabling more precise point-in-time recovery options. However, it's important to note that a higher frequency of log catchup operations can lead to increased system load. Therefore, the optimal frequency may vary depending on the specific requirements and capabilities of your system^{1,2}. Please refer to the Nutanix Database Automation (NCP-DB) Learning documents for more detailed information.

NEW QUESTION # 35

When preparing to provision multiple database server VMs, an administrator is tasked with configuring this set of VMs with the same number of cores per vCPU.

What is the easiest way for the administrator to accomplish this task?

- A. Update the VMs after provisioning and enter the changes to the vCPU cores.
- **B. Create a Compute Profile and apply it to the VMs during provisioning.**
- C. Create a Windows Domain Profile that will synchronize the configurations.
- D. After provisioning the VMs, update the DEFAULT_OOB_COMPUTE Profile.

Answer: B

Explanation:

A Compute Profile is a template that defines the CPU, memory, and disk resources for a database server VM.

By creating a Compute Profile with the desired number of cores per vCPU, the administrator can easily apply it to multiple VMs during provisioning, ensuring consistent and optimal performance. This also saves time and effort compared to updating the VMs individually or modifying the default profile after provisioning. References: Nutanix Database Automation (NCP-DB) Course Details, Nutanix Database Automation (NCP-DB) CertificationDetails, Nutanix Database Automation (NCP-DB) YouTube Playlist, How-to setup number of cores per CPU in a virtual machine.

NEW QUESTION # 36

An administrator needs to replace the default Nutanix self-signed certificates in Era.

Which SSL Certificate file format is supported?

- A. PKCS#7
- B. DER encoded binary X.509
- **C. Base-64 encoded X 509**
- D. PKCS#12

Answer: C

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, Nutanix Era supports x509 certificates in Base-64 encoded PEM format¹. This format is used when an administrator needs to replace the default Nutanix self-signed certificates in Era¹.

NEW QUESTION # 37

.....

We can't deny that the pursuit of success can encourage us to make greater progress. Just as exactly, to obtain the certification of NCP-DB exam braindumps, you will do your best to pass the according exam without giving up. You may not have to take the trouble to study with the help of our NCP-DB practice materials. We claim that you can be ready to attend your exam after studying with our NCP-DBstudy guide for 20 to 30 hours because we have been professional on this career for years.
