

# Prepare with Actual Cloud Security Alliance CCSK Exam Questions to Get Certified in First Attempt

CCSK Exam Overview	
Certification Name	Certificate of Cloud Security Knowledge (CCSK)
Exam Format	Multiple Choice Questions
Number of Questions	60
Exam Duration	90 Minutes
Exam Cost	345 USD
Exam Language	English
Exam Level	Moderate to Harder
Passing Score	80%
Renewal	Not Required

P.S. Free & New CCSK dumps are available on Google Drive shared by Exam4Tests: <https://drive.google.com/open?id=1ImAzXo1-WTbFPqwy7n0Vu4S5uIM9CDSG>

In order to help you get CCSK certification, many experts have worked hard for several years to formulate CCSK exam torrent for all examiners. In such a way, our CCSK study materials not only target but also cover all knowledge points. Our CCSK practice materials also have a statistical analysis function to help you find out the deficiency in the learning process of CCSK practice materials, so that you can strengthen the training for weak links. In this way, you can more confident for your success since you have improved your ability.

Quality of CCSK learning quiz you purchased is of prior importance for consumers. Our CCSK practice materials make it easier to prepare exam with a variety of high quality functions. The quality function of our CCSK exam questions is observably clear once you download them. We have three kinds of CCSK Real Exam moderately priced for your reference: the PDF, Software and APP online. And you can choose any version according to your interests and hobbies.

## New Cloud Security Alliance CCSK Test Experience - CCSK Test Dumps Pdf

The software creates an Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) exam-like scenario for you which helps to kill anxiety about the Cloud Security Alliance CCSK Certification Exams Questions. Customizable CCSK practice test software enables you to change settings of practice exam time and questions. Since the Exam4Tests software tracks your progress, you can know mistakes and overcome them before the Cloud Security Alliance CCSK final test.

## Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q113-Q118):

### NEW QUESTION # 113

What is a primary benefit of consolidating traffic through a central bastion/transit network in a hybrid cloud environment?

- A. It decreases the latency of data transfers across the cloud network.
- B. It reduces the need for physical network hardware.
- C. It minimizes hybrid cloud sprawl and consolidates security.
- D. It increases network redundancy and fault tolerance.

**Answer: C**

Explanation:

A centralized bastion or transit network improves hybrid cloud security by:

- \* Reducing cloud sprawl through a unified security control point.
- \* Centralizing firewall, logging, and security monitoring for better threat detection and response.
- \* Enforcing consistent security policies across different cloud platforms (AWS, Azure, on-premises data centers).
- \* Minimizing unauthorized lateral movement within hybrid cloud environments.

This concept is extensively covered in:

- \* CCSK v5 - Security Guidance v4.0, Domain 7 (Infrastructure Security)
- \* Cloud Controls Matrix (CCM) - Network Security and Monitoring.

#### NEW QUESTION # 114

In preparing for cloud incident response, why is it crucial to establish a cloud deployment registry?

- A. To track incident support options, know account details, and contact information
- B. To maintain a log of all incident response activities and have efficient reporting
- C. To document all cloud services APIs
- D. To list all cloud-compliant software

**Answer: A**

Explanation:

Establishing a cloud deployment registry is crucial for cloud incident response because it helps track critical information related to the cloud environment, such as incident support options, account details, and contact information for cloud service providers (CSPs). This registry provides a central place where key details about cloud services and deployments are documented, allowing the incident response team to quickly access necessary information, escalate issues to the appropriate CSP support teams, and coordinate response efforts effectively.

#### NEW QUESTION # 115

What is the primary goal of implementing DevOps in a software development lifecycle?

- A. To reduce the development team size by merging roles
- B. To create a separation between development and operations
- C. To enhance collaboration between development and IT operations for efficient delivery
- D. To eliminate the need for IT operations by automating all tasks

**Answer: C**

Explanation:

DevOps aims to improve collaboration and integration between development and operations teams, streamlining delivery and enhancing software quality. Reference: [CCSK Study Guide, Domain 10 - DevOps & DevSecOps]

#### NEW QUESTION # 116

Which of the following is a primary benefit of using Infrastructure as Code (IaC) in a security context?

- A. Ad hoc security policies
- B. Automated compliance checks
- C. Static resource allocation
- D. Manual patch management

**Answer: B**

Explanation:

The correct answer is B. Automated compliance checks.

Infrastructure as Code (IaC) is a key DevSecOps practice where infrastructure configurations are defined and managed through code. In a security context, the primary benefit of using IaC is the ability to automate compliance checks and enforce security best practices consistently across environments.

Key Benefits of IaC in Security:

**Automated Compliance:** IaC allows for the embedding of security policies directly into configuration scripts. This means that when infrastructure is deployed, it automatically adheres to compliance requirements (like NIST, CIS benchmarks).

**Consistency and Repeatability:** Since IaC scripts are version-controlled, any configuration changes are tracked, minimizing the risk of configuration drift.

**Security by Design:** By coding security configurations (like IAM roles, network ACLs, encryption settings), organizations ensure that every deployment meets security standards.

Reduced Human Error: Automating infrastructure provisioning reduces manual errors that can lead to vulnerabilities.

Why Other Options Are Incorrect:

A . Manual patch management: IaC promotes automated and repeatable configurations, reducing the need for manual patching.

B . Ad hoc security policies: IaC encourages standardized and consistent policies rather than ad hoc management.

C . Static resource allocation: IaC is dynamic and scalable, allowing for automatic scaling and configuration management rather than static resource setups.

Real-World Example:

Using tools like Terraform or AWS CloudFormation, organizations can define IAM policies, security group rules, and data encryption settings as part of the infrastructure code. These configurations are then automatically checked for compliance against established policies during deployment.

Security and Compliance in IaC:

Organizations can integrate tools like Terraform Compliance or AWS Config Rules to automatically verify that infrastructure settings align with regulatory requirements and internal security policies.

### NEW QUESTION # 117

What is the purpose of the "Principle of Least Privilege" in Identity and Access Management (IAM)?

- A. To implement multiple layers of security checks for access control
- **B. To minimize the risk of unauthorized access by assigning access rights based on role requirements**
- C. To streamline access across diverse systems or organizations
- D. To continuously monitor user activity for suspicious behavior

**Answer: B**

Explanation:

The Principle of Least Privilege (PoLP) is a foundational concept in IAM, highlighted in the CSA Security Guidance v4.0 - Domain 12: Identity, Entitlement, and Access Management. It ensures users, systems, and processes are granted only the permissions necessary to perform their tasks - and nothing more.

"Least privilege refers to granting the minimum level of access - or permissions - needed for users or services to perform their required functions, thereby reducing the attack surface and limiting potential damage from misuse or compromise."

- CSA Security Guidance v4.0, Domain 12

This principle:

Reduces the likelihood of accidental or malicious misuse

Limits damage in the case of credential theft

Supports compliance with least privilege mandates in frameworks like ISO/IEC 27001 and NIST

Incorrect options:

B is related to federation, not least privilege

C involves monitoring and analytics, not permission assignment

D is about defense in depth, which is broader than PoLP

Reference:

CSA Security Guidance v4.0 - Domain 12: IAM

CCM v3.0.1 - IAM-01, IAM-05 (Covers least privilege and role-based access control)

### NEW QUESTION # 118

.....

With this software, you can evaluate your Cloud Security Alliance CCSK exam preparation. The beforehand awareness of your weaknesses will help you take the Cloud Security Alliance certification exam successfully. Environment you encounter during the practice test is similar to the real Cloud Security Alliance CCSK Exam. This feature of software will help you kill Cloud Security Alliance CCSK Exam anxiety.
