It-Pruefung ist eine Website, die den Traum der IT-Fachleute erfüllen kann. It-Pruefung bietet den Kandidaten die gewünschte Materialien, mit den Sie die Prüfung bestehen können. Machen Sie sich noch Sorgen um die Juniper JN0-224 Zertifizierungsprüfung? Haben Sie schon mal gedacht, die relevanten Kurse von It-Pruefung zu kaufen? Die Schulungsunterlagen von It-Pruefung wird Ihnen helfen, die Prüfung effizienter zu bestehen. Die Fragen von It-Pruefung sind den realen Prüfungsfragen ähnlich, fast mit ihnen identisch. Mit den genauen Prüfungsfragen und Antworten zur Juniper JN0-224 Zertifizierungsprüfung können Sie die Prüfung leicht bestehen.

Juniper JN0-224 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Thema 2	Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.
Thema 3	- Python - PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Thema 4	Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Thema 5	- NETCONF - XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) JN0-224 Prüfungsfragen mit Lösungen (Q57-Q62):

57. Frage

Exhibit.

Referring to the exhibit, which statement about REST is correct?

- A. The device is configured to allow connections from the REST API Explorer
- B. The device is configured to allow only two simultaneous REST connections.
- **C. The device is configured to allow HTTPS connections on port 3443.**
- D. The device is configured to allow HTTP connections on port 3030.

Antwort: C

58. Frage

Your organization is developing an application to automate management of Junos network appliances. You want to use the existing PyEZ libraries to improve the development process. Which API would satisfy this requirement?

- A. RPC API
- B. XML API
- **C. REST API**
- D. JETAPI

Antwort: C

59. Frage

Junos supports which two APIs for on-box scripting? (Choose two.)

- **A. JET**
- B. Chef
- C. Puppet
- **D. XML**

Antwort: A,D

Begründung:

Juniper Networks' Junos operating system supports several APIs for on-box scripting, two of which are:

JET (Juniper Extension Toolkit): JET is a modern API framework that provides a programmable interface for interacting with Junos. It allows developers to create custom applications that run directly on Junos devices, enabling the automation of network operations. JET provides both a gRPC and a REST API interface, allowing for flexible integration with external systems.

XML API: The Junos XML API allows direct interaction with the Junos OS through XML-based requests. This API can be used to retrieve information, configure devices, and execute commands on Junos devices. The XML API is crucial for automation tasks as it provides a structured and consistent way to interact with the device's configuration and operational data.

Detailed Explanation:

JET (A) provides high-performance access to Junos routing, switching, and service elements via programmable interfaces. It is highly used for creating custom applications that require tight integration with the Junos OS.

XML (C), on the other hand, is a well-established method for interacting with Junos, especially for legacy systems or when working within environments where XML is the standard data format.

Other options like Puppet (B) and Chef (D) are not APIs provided by Junos for on-box scripting but are configuration management tools used externally to manage Junos devices.

Reference:

Juniper Networks JET Documentation: Provides details on how to leverage JET APIs for automation.

Junos XML Management Protocol Guide: Describes how to use XML for scripting and automating tasks in Junos.

These APIs are key components of Juniper's automation strategy, allowing for scalable, flexible, and efficient network operations.

60. Frage

Which statement is correct about DevOps?

- A. DevOps is meant to unite the development, operations, and other teams to improve project collaborations.
- B. DevOps is a collection of strict guidelines that promotes the project completion over all other aspects.
- C. DevOps is a defined standard written and maintained by the IEEE standards group.
- D. DevOps is meant to define and restrict the development and operations tools used for a project.

Antwort: A

Begründung:

DevOps is a set of practices, tools, and cultural philosophies that aims to integrate and automate the processes between software development and IT operations teams. The primary goal of DevOps is to shorten the systems development life cycle and provide continuous delivery with high software quality.

Option C is correct because DevOps fundamentally focuses on breaking down the silos between development and operations teams, fostering a collaborative environment where these teams work together throughout the entire software lifecycle. This collaboration extends to other stakeholders, including quality assurance (QA), security, and more, to ensure that the product is continuously delivered and improved based on real-time feedback.

DevOps promotes a cultural shift where teams are no longer isolated but work together to share responsibilities, which leads to increased efficiency, faster problem resolution, and a more streamlined deployment process. This culture of collaboration is supported by various automation tools and practices such as Continuous Integration (CI), Continuous Deployment (CD), Infrastructure as Code (IaC), and automated testing.

Supporting Reference:

Juniper Networks Automation and DevOps Documentation: This documentation emphasizes the importance of collaboration between development and operations teams to streamline processes and improve efficiency, aligning perfectly with the principles of DevOps.

"The DevOps Handbook" by Gene Kim, Patrick Debois, John Willis, and Jez Humble: This book provides an in-depth look into how DevOps practices enhance collaboration and lead to faster, more reliable software delivery.

IEEE and Industry Standards: While DevOps practices are widely adopted, they are not defined or maintained by IEEE or any other formal standards body, which is why option D is incorrect.

61. Frage

You want to perform a dry run on the myPlays playbook and use a custom inventory file called myRouters.ini.

Which Ansible command would you use in this scenario?

- A. ansible-playbook myPlays -extra-vars "dry run=True" myRouters.ini
- B. ansible-playbook myPlays --check -i myRouters.ini
- C. ansible-playbook myPlays -extra-vars "inventory_file=myRouters .ini"
- D. ansible-playbook myPlays -limit myRouters

Antwort: C
