

# HPE7-J01 Test Questions Fee & Best HPE7-J01 Preparation Materials

The Desktop HP HPE7-J01 Practice Exam Software contains real HP HPE7-J01 exam questions. This provides you with a realistic experience of being in an HP HPE7-J01 examination setting. This feature assists you in becoming familiar with the layout of the HP HPE7-J01 test and enhances your ability to do well on Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) examination.

If you prefer to prepare for your exam on paper, then our HPE7-J01 exam materials will be your best choice. HPE7-J01 PDF version is convenient to read and printable, and you can take them with you, and you can practice them anywhere and anyplace. Besides, free demo for HPE7-J01 PDF version is available, and you can try before buying. We are pass guarantee and money back guarantee and if you fail to pass the exam. You can receive the downloading link and password for HPE7-J01 Training Materials within ten minutes for HPE7-J01 exam materials, if you don't receive, you can contact with us, and we will solve the problem for you.

## 2026 HPE7-J01: Advanced HPE Storage Architect Solutions Written Exam High Hit-Rate Test Questions Fee

Nowadays the competition in the job market is fiercer than any time in the past. If you want to find a good job, you must own good competences and skillful major knowledge. So owning the HPE7-J01 certification is necessary for you because we will provide the best study materials to you. Our HPE7-J01 Exam Torrent is of high quality and efficient, and it can help you pass the test successfully.

## HP Advanced HPE Storage Architect Solutions Written Exam Sample Questions (Q23-Q28):

### NEW QUESTION # 23

Hotspot Question

An administrator needs to verify that the HPE plug-in was installed in VMware vCenter to correctly integrate with the HPE Alletra storage array. Use your cursor to place a + where the administrator can click to verify the plug-in installation.

**Answer:**

**Explanation:**

#### NEW QUESTION # 24

A customer purchased an HPE GreenLake for File Storage solution and implemented the replication feature. Which statement is correct regarding this feature?

- A. Client hardware has read-write access to both the source and destination replication arrays.
- **B. N:1 and 1:N replication is supported, with snapshots taken at the directory level.**
- C. Two protected paths configured on the same path can be used to replicate to the same peer.
- D. Data reduction, including deduplication, is performed between the storage arrays.

**Answer: B**

Explanation:

HPE GreenLake for File Storage is built upon a disaggregated, shared-everything (DASE) architecture powered by VAST Data software. The replication mechanism in this environment is fundamentally different from traditional block-based replication. Instead of replicating entire volumes or LUNs, HPE GreenLake for File Storage performs replication at the directory level.

According to the HPE GreenLake for File Storage Administrator Guide, the system utilizes a snapshot-based asynchronous replication engine. This allows for highly flexible topologies, including N:1 (fan-in) and 1:N (fan-out) configurations, which are essential for modern distributed data environments and centralized backup strategies. Because the solution is file-based, it leverages "Views" (or shares) that point to specific directory paths. Protection policies and snapshot schedules are applied directly to these paths, ensuring that only the specific datasets required for disaster recovery are replicated.

#### NEW QUESTION # 25

A storage administrator is creating a disaster recovery solution for HPE Alletra 9000 storage arrays.

Currently, the company has three storage arrays at three different primary sites. When implementing the N-to-1 Remote Copy (RC) feature, what is the minimum number of storage arrays the storage administrator needs to plan for at the disaster recovery site?

- A. Four
- B. Six
- C. Two
- **D. One**

**Answer: D**

Explanation:

The HPE Alletra 9000 (and its predecessor, HPE Primera) supports various Remote Copy (RC) topologies to meet different disaster recovery and data distribution requirements. These include 1-to-1, 1-to-N (fan-out), and N-to-1 (fan-in) configurations. In an N-to-1 Remote Copy configuration, multiple source storage systems (represented by 'N') replicate their data to a single, centralized target system at a disaster recovery (DR) or secondary site. This architecture is particularly efficient for organizations with multiple regional or branch offices that wish to centralize their backup and DR operations into a single data center to reduce hardware costs and simplify management. In the scenario described, the company has three primary sites ( $N = 3$ ), each with its own storage array. To implement an N-to-1 strategy, the administrator only needs to provide one storage array at the DR site. This single target array must be sized appropriately to handle the combined capacity and performance requirements (IOPS and throughput) of the incoming replication streams from all three source systems.

Architecturally, the Alletra 9000 uses Remote Copy Groups to manage these relationships. Each group on the source systems is mapped to a corresponding group on the single target system. It is important to note that while the hardware requirement is a single array, the administrator must ensure the target array has sufficient Remote Copy ports (RCIP or RCFC) and licensed capacity to accommodate the fan-in ratio. The Alletra

9000 management interface and HPE GreenLake Data Services Cloud Console (DSCC) provide the orchestration necessary to monitor these multiple inbound streams and ensure that the Recovery Point Objectives (RPOs) are met across all sites simultaneously.

### NEW QUESTION # 26

A company with 2484 VMs and 300 servers needs to implement a file, object, and block storage solution. What are the minimum requirements for this solution?

- A. Three HPE Alletra MP X10000s
- B. One HPE Alletra MP B10000 and two HPE Alletra MP X10000s
- C. Two HPE Alletra MP B10000s and one HPE Alletra MP X10000
- D. One HPE Alletra MP B10000 and one HPE Alletra MP X10000

**Answer: A**

Explanation:

The HPE Alletra MP is a modular, disaggregated storage platform designed to provide different storage personas (Block or File/Object) based on the software stack installed on the controller nodes. However, the minimum hardware "footprint" required to form a functional, supported cluster differs significantly between these personas.

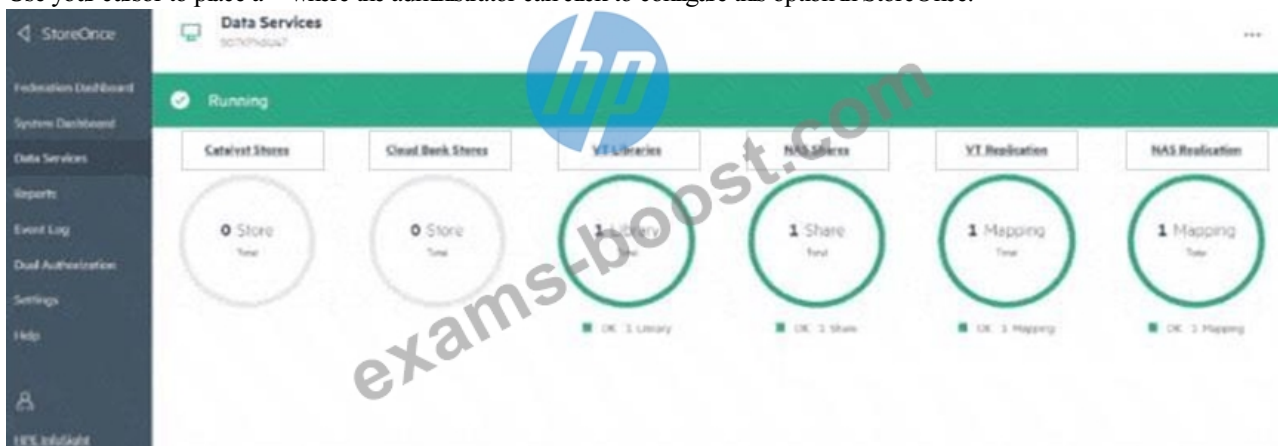

For HPE GreenLake for File Storage (which utilizes the Alletra MP X10000 hardware and provides both File and Object protocols), the architecture is based on a disaggregated shared- everything (DASE) model. According to the HPE Alletra MP Installation and Architecture Guide, the minimum supported configuration for a File/Object cluster is three X10000 controller nodes. This 3-node minimum is a hard requirement to establish proper quorum and high availability for the V-Tree metadata and the distributed file system logic.

### NEW QUESTION # 27

Hotspot Question

An administrator needs to create a backup policy for an Oracle database using the RMAN tool.

Use your cursor to place a + where the administrator can click to configure this option in StoreOnce.

**Answer:**

Explanation:

## NEW QUESTION # 28

.....

If you are busying with your work or study, and have little time for preparation of your exam, our HPE7-J01 questions and answers will be your best choice. With experienced experts to compile and verify, HPE7-J01 exam dumps contain most of the knowledge points for the exam, and you just need to spend about 48 to 72 hours on study, you can pass the exam just one time. In addition, you can try free demo before buying HPE7-J01 Materials, so that you can have a better understanding of what you are going to buy. You can get downloading link and password within ten minutes after payment, so that you can start your learning right away.
