NEW QUESTION # 472

Inventory in a warehouse is assigned to an inventory status of available.

You need to set up an inventory status for damaged items so that they are not sold to customers.

Which values should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

NEW QUESTION # 473

CompanyA is a wholesaler implementing Dynamics 365 Supply Chain Management.

CompanyB is a retailer that has multiple retail stores and one centralized distribution center.

CompanyA receives a separate sales order for each of CompanyB's retail stores. The sales orders must be shipped together to the centralized distribution center, with each retail store order picked and packed separately.

You need to configure the system to ensure that CompanyB's requirements are met through the outbound shipments from CompanyA.

Which two features should you configure? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Container mixing constraints
- B. Allow system grouping
- C. Location profile
- D. Space utilization
- E. Consolidate shipments

Answer: C,D

Explanation:

C: Set up location profiles for packing locations

Each location profile establishes information and rules that apply to the associated locations.

Because you need at least one location to use for packing operations, you must create a location profile for it in addition to a location type. Each profile can be used by any number of locations.

Locations that are used for packing must be set up to track license plates.

B: Schedule load utilization

You can schedule load utilization for selected location types, and you can also project the current and future load utilization. You can project the load for one or more sites, for the load units (zone or warehouse), or for a combination of a zone and a warehouse.

Schedule and view the load for a warehouse or site

To schedule the load for sites, warehouses, or zones, you create a space utilization setup and associate it with a master plan.

In the space utilization setup, you use location types, such as Bulk location and Picking location, to specify how space utilization should be projected. You also specify a storage load mode, such as Zone.

The projection of future space utilization is based on information that is calculated on the associated master plan. Master plans forecast the resource planning for incoming and outgoing orders for production and operations. The projection of available space is based on the relation between the space utilization setup and the selected master plan.

Incorrect:

Not A: The container mixing constraint allows you to add fields by which you want the system to split the items into a new container.

Not D: By using a system grouping field, you can filter an open work list without having to edit the mobile device menu item. Where it applies, system grouping works for filtering a work list on a single work header field. You cannot use system grouping to filter on line level fields.

NEW QUESTION # 474

A company uses Dynamics 365 Supply Chain Management. There are two warehouses. All inventory is purchased into Warehouse1 and transferred to Warehouse2 based on replenishment rules.

Planned orders were generated overnight by the master planning engine and do not need to be reviewed.

Warehouse1 orders for Warehouse2 do not show as available for picking and shipping.

Planned orders must be available for warehouse processing as quickly as possible and processed as a group.

You need to configure the system to meet the requirements.

Which solution should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐
