Training Mule-Arch-202 Online | Mule-Arch-202 Interactive EBook

Our desktop Salesforce Certified MuleSoft Platform Integration Architect (Mule-Arch-202) practice exam software allows you to see your progress report at the end of each attempt. In this way, you find your mistakes and overcome them before the final take. Our desktop software is customizable so you can change the duration and Salesforce questions of Mule-Arch-202 Practice Tests according to your learning requirements. Since this software requires installation on Windows computers, you can take the Salesforce Certified MuleSoft Platform Integration Architect (Mule-Arch-202) practice exam offline.

If you buy the Mule-Arch-202 study materials of us, we ensure you to pass the exam. Since the Mule-Arch-202 study materials have the quality and the accuracy, and it will help you pass exam just one time. Buying Mule-Arch-202 exam dumps are pass guaranteed and money back guaranteed for the failure. Furthermore, we choose international confirmation third party for payment for the Mule-Arch-202 Exam Dumps, therefore we can ensure you the safety of your account and your money. The refund money will return to your payment account.

Free PDF Mule-Arch-202 - Efficient Training Salesforce Certified MuleSoft Platform Integration Architect Online
As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into

Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q137-Q142):

NEW QUESTION # 137
Refer to the exhibit.

A shopping cart checkout process consists of a web store back end that sends a sequence of HTTPS POST requests to an Experience API, which in turn invokes a Process API using HTTPS. The web store back end executes in a Java EE application server. All API implementations are Mule applications executing in a customer-hosted Mule runtime. End-to-end correlation of all HTTP requests and responses belonging to each checkout instance is required. This is to be done through a common correlation ID so that all log entries written by the web store back end, Experience API implementation, and Process API implementation include the same correlation ID for all requests and responses belonging to the same checkout instance. What is the most efficient way (using the least amount of custom coding or configuration) for the web store back end and the implementations of the Experience API and Process API to participate in end-to-end correlation of the API invocations for each checkout instance?

- A. The web store back end, being a Java EE application, automatically uses the thread-local correlation ID generated by the Java EE application server and automatically transmits that to the Experience API using standard HTTP headers.
- B. The Experience API implementation generates a correlation ID for each incoming HTTP request and passes it to the web store back end in the HTTP response, which includes it in all subsequent API invocations to the Experience API.
- C. The web store back end generates a new correlation ID value at the start of checkout and sets it on the X-Correlation-ID HTTP request header in each API invocation belonging to that checkout.
- D. The web store back end sends a correlation ID value in the HTTP request body in the way required by the Experience API.

Answer: C

NEW QUESTION # 138
What are two considerations when designing Mule APIs and integrations that leverage an enterprise-wide common data model (CDM)? (Choose two.)

- A. All data types required by the APIs are not typically defined by the CDM
- B. The CDM models multiple definitions of a given data type based on separate domains
- C. The CDM typically does not model process-level APIs
- D. The CDM typically does not model experience-level APIs
- E. Changes made to the data model do not impact the implementations of the APIs

Answer: A,D

NEW QUESTION # 139
In what scenarios is using a shared configuration within Mule runtime domains most advantageous?

- A. When applications do not interact with each other at all.

- B. When deploying lightweight microservices.
- C. When unique runtime properties are required for each application.
- D. When multiple applications need to invoke the same services.

Answer: D

NEW QUESTION # 140
An organization is implementing a Quote of the Day API that caches today's quote.
Which scenario can use the CloudHub Object Store v2 via the Object Store Connector to persist the cache's state?

- A. When there are two CloudHub deployments of the API implementation that must share the cache state, where the API implementations are deployed to two different CloudHub VPNs within the same business group
- B. When there are two CloudHub deployments of the API implementation that must share the cache state, where each API implementation is deployed from a different Anypoint Platform business group to the same CloudHub region
- C. When there is one deployment of the API implementation to CloudHub and another deployment to a customer-hosted Mule runtime, where both deployments must share the cache state
- D. When there is one CloudHub deployment of the API implementation to three CloudHub workers/replicas, where all three CloudHub workers/replicas must share the cache state

Answer: D

NEW QUESTION # 141
A Mule application is deployed to an existing Runtime Fabric (RTF) cluster and must access the data saved in the Object Store V2 by a CloudHub application.
Which steps should be followed to achieve the requirement and enable the shared Object Store access across these two applications?

- A. Obtain the Client ID and Client Secret from the CloudHub App Object Store
- B. Obtain the Client ID and Client Secret from the Business Group
- C. Obtain the Access Token from the /oauth2/token endpoint
- D. Obtain the Access Token from the CloudHub App Object Store

Answer: A

NEW QUESTION # 142
......

We have three versions of our Mule-Arch-202 certification guide, and they are PDF version, software version and online version. With the PDF version, you can print our materials onto paper and learn our Mule-Arch-202 exam braindumps in a more handy way as you can take notes whenever you want to, and you can mark out whatever you need to review later. With the software version, you are allowed to install our Salesforce Certified MuleSoft Platform Integration Architect guide torrent in all computers that operate in windows system. Besides, the software version can simulate the real test environment, which is favorable for people to better adapt to the examination atmosphere. With the online version, you can study the Salesforce Certified MuleSoft Platform Integration Architect guide torrent wherever you like, and you still have access to the materials even if there is no internet available on the premise that you have studied the Mule-Arch-202 Certification guide online once before.

Salesforce Training Mule-Arch-202 Online click Next,type in your comments, and click Submit, There are Mule-Arch-202 free demo for you to be downloaded, This allows TestPassed Mule-Arch-202 Interactive EBook to always have the materials of highest quality, Salesforce Training Mule-Arch-202 Online The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it, Now they have become certified Salesforce Mule-Arch-202 Interactive EBook professionals and offer their services to top world brands.

Using the Strings Class, Current employees with unauthorized activities, click Next,type in your comments, and click Submit, There are Mule-Arch-202 free demo for you to be downloaded.

This allows TestPassed to always have the materials Mule-Arch-202 Interactive EBook of highest quality, The page of our product
