Portworx-Enterprise-Professional Echte Fragen & Portworx-Enterprise-Professional Schulungsangebot

Wollen Sie, ein ITeer, durch den Erfolg zu IT-Zertifizierungsprüfungen Ihre Fähigkeit beweisen? Und heute besitzen immer mehr Ihre Freuden und Kommilitonen die IT-Zertifizierungen. Und in diesem Fall können Sie weniger Chancen haben, wenn Sie keine Zertifizierung haben. Und haben Sie sich entschieden, welche Prüfung abzulegen? Wie sind Pure Storage Prüfungen? Oder Pure Storage Portworx-Enterprise-Professional Zertifizierungsprüfung? Pure Storage Portworx-Enterprise-Professional Zertifizierungsprüfung ist wertvoll und hilft Ihnen unbedingt, Ihren Wunsch zu erreichen.

Pure Storage Portworx-Enterprise-Professional Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.

Thema 2	<ul style="list-style-type: none"> • Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.
Thema 3	<ul style="list-style-type: none"> • Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.
Thema 4	<ul style="list-style-type: none"> • Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.
Thema 5	<ul style="list-style-type: none"> • Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.

26. Frage

When utilizing volume encryption, what is a supported external key manager?

- A. Microsoft Key Management Services
- **B. Hashicorp Vault**
- C. Static keys stored in an S3 bucket

Antwort: B

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Hashicorp Vault is a widely supported external Key Management System (KMS) integrated with Portworx for volume encryption. It offers robust capabilities including secure key generation, storage, rotation, and access control, making it well-suited for managing encryption keys in enterprise environments. Integrating Portworx with Hashicorp Vault enables automated and secure key retrieval during volume provisioning and use, ensuring compliance with security policies and regulations. Unlike static keys stored in S3 buckets, which lack dynamic security controls, Hashicorp Vault provides granular policy enforcement and audit logging. Microsoft Key Management Services (KMS) is not currently supported as an external KMS for Portworx encryption. Portworx security documentation emphasizes Hashicorp Vault's importance in maintaining secure key lifecycle management for encrypted volumes, highlighting it as the preferred KMS solution in multi-cloud and hybrid environments **【Pure Storage Portworx Security Guide source】**.

27. Frage

Which CRD object can be used to restore an existing ApplicationBackup?

- A. Migration
- B. VolumeSnapshot
- **C. ApplicationRestore**

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

The ApplicationRestore Custom Resource Definition (CRD) object in Portworx is specifically designed to restore an application from an existing ApplicationBackup. This object orchestrates the process of recovering a consistent snapshot of an application, including all its associated volumes, in Kubernetes environments. Using ApplicationRestore, administrators can define the source backup, restore location, and any necessary transformations during restoration. This facilitates disaster recovery, migration, or rollback scenarios for complex stateful applications. The Portworx backup and restore documentation clearly defines ApplicationRestore as the controller responsible for application-level recovery operations, ensuring data integrity and consistency

throughout the restore workflow **【Pure Storage Portworx Backup and Restore Guide source】** .

28. Frage

What is a benefit of using Autopilot in Portworx environments?

- A. It facilitates the migration of containers across clusters.
- **B. It automates the expansion of storage volumes based on predefined rules.**
- C. Provides enhanced security features for data protection.

Antwort: B

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Autopilot is a key feature in Portworx designed to automate operational tasks such as capacity management and volume resizing. One of its primary benefits is automating the expansion of storage volumes based on predefined rules and thresholds. This means that when a volume approaches its storage limit, Autopilot can automatically trigger volume expansion without manual intervention, ensuring applications have uninterrupted access to storage resources. This automation reduces operational overhead, eliminates manual errors, and helps maintain application performance and availability. While Autopilot doesn't directly handle container migration or security enhancements, its dynamic volume management capabilities play a critical role in operational efficiency and business continuity. The Portworx documentation highlights Autopilot as a tool for intelligent, policy-driven storage management that adapts to workload demands in real time **【Pure Storage Portworx Autopilot Guide source】** .

29. Frage

A Portworx administrator wants to control which nodes will host a KVDB installation.

What steps must an administrator take to ensure that KVDB installs on NODE01, NODE03, and NODE05?

- A. It is not possible to configure the location of the KVDB prior to installation.
- B. Label NODE01, NODE03, and NODE05 with 'px1/metadata-node=true' prior to installation.
- **C. Change the following in the 'StorageCluster' spec prior to installation:**
spec:
kvdb:
selector:
matchNodeName:
- NODE01
- NODE03
- NODE05

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx provides a mechanism to control KVDB pod placement through the kvdb.selector.matchNodeName field in the StorageCluster Custom Resource Definition (CRD). This allows administrators to explicitly specify node names where KVDB pods will be deployed. By setting this selector to include NODE01, NODE03, and NODE05, KVDB pods will run exclusively on these nodes, ensuring better control of quorum, fault tolerance, and performance. Node labeling alone is insufficient unless the labels are properly referenced in the spec, making direct node name matching the most straightforward and reliable method. This configuration must be done prior to cluster installation to ensure proper pod placement. Official Portworx documentation on cluster deployment and KVDB configuration confirms this method as the recommended best practice for managing KVDB nodes, critical for maintaining database availability and consistency within the Portworx cluster **【Pure Storage Portworx Install Guide source】** .

30. Frage

What configuration steps should a Portworx Administrator perform to ensure that Portworx can use the S3 Object Store using a custom/3rd party (not signed by public CA) certificate?

- **A. Create a Kubernetes secret containing the certificate and reference it in the storagecluster via env variable.**
- B. Create a secret containing the certificate and run pxctl certificate import command.
- C. No additional configuration is necessary.

Antwort: A

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

When integrating Portworx with an S3 Object Store secured by a custom or third-party certificate that is not signed by a public Certificate Authority (CA), administrators must manually provide the relevant CA certificate to Portworx. This involves creating a Kubernetes secret that contains the custom CA certificate and referencing this secret in the StorageCluster manifest through environment variables. This allows Portworx components to trust the certificate during TLS handshake with the S3 endpoint, avoiding connection failures due to untrusted certificates. Without this step, Portworx cannot securely communicate with the object store. The Portworx security and installation documentation highlights this practice as essential for secure Object Store integration in private or regulated environments where internal or custom PKIs are used **【Pure Storage Portworx Security Guide source】** .
