

# 2026 100% Free HPE7-A12–Latest 100% Free Instant Access | Guide HPE Network Data Center Professional Architect Exam Torrent

The cost of registering a HPE7-A12 Certification is quite expensive, ranging between \$100 and \$1000. After paying such an amount, the candidate is sure to be on a tight budget. ExamDumpsVCE provides HP HPE7-A12 preparation material at very low prices compared to other platforms. We also assure you that the amount will not be wasted and you will not have to pay for the certification a second time. For added reassurance, we also provide up to 1 year of free updates. Free demo version of the actual product is also available so that you can verify its validity before purchasing.

## HP HPE7-A12 Exam Syllabus Topics:

| Section                                                       | Objectives                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Guide HPE7-A12 Torrent - Valid Dumps HPE7-A12 Free

Our company is a multinational company with sales and after-sale service of HPE7-A12 exam torrent compiling departments throughout the world. In addition, our company has become the top-notch one in the fields, therefore, if you are preparing for the exam in order to get the related certification, then the HPE Network Data Center Professional Architect Exam exam question compiled by our company is your solid choice. All employees worldwide in our company operate under a common mission: to be the best global supplier of electronic HPE7-A12 Exam Torrent for our customers through product innovation and enhancement of customers' satisfaction. Wherever you are in the world we will provide you with the most useful and effectively HPE7-A12 guide torrent in this website, which will help you to pass the exam as well as getting the related certification with a great ease.

## HPE Network Data Center Professional Architect Exam Sample Questions (Q39-Q44):

### NEW QUESTION # 39

What is an advantage of using a VSX-pair instead of two discrete switches to connect servers, storage, firewalls, and other workloads?

- A. Bare metal servers can be connected via MLAGs using LACP.
- B. You can save half the number of licenses needed for AFC.
- C. You only need to configure a single routing control-plane.
- D. The setup is much easier since both switches are sharing the same configuration.

**Answer: A**

Explanation:

A VSX pair allows downstream devices such as servers, storage, and firewalls to connect with active-active LAGs across two physical switches, improving redundancy without requiring the endpoint to run a complex HA protocol.

### NEW QUESTION # 40

Waratah Hospital, based in Australia, is planning to move many data center services to new facility. (The remaining legacy data center will not be part of this project.) Waratah Hospital hired an external consultant to assist with the new data center network design.

Based on the requirements for the data center network infrastructure, the external consultant has created a high-level design. The below summarizes the content of the design document.

Requirements and information:

- Six racks in the data center room (single row).
- Redundant Top of Rack leaf switches with back-to-front cooling in each rack, providing 10/25 Gbps connectivity to servers, storage, and other devices.
- Four 100 GbE uplinks per leaf switch.
- The customer requested to install all switch ports facing the back of the rack racks (hot aisle.)
- OOB management for servers, storage, and network has to be provided through an external switch with back-to-front cooling. This switch has to be included in the solution. One OOB switch provides connectivity for two racks.
- Core equipment for the OOB network is being reused.
- Middle-of-row spine switches.
- The data center should connect to the hospital building with links that provide 400 Gbps.

- Internet access is provided through an existing firewall cluster with two firewalls, each firewall in one data room. The second firewall is operating in standby mode, VRRP is utilized on the firewalls for failover. The data center network should connect to these firewalls with links that total 100 Gbps.

- The external link is a dark fiber direct link based on single-mode fiber (OS2). The distance to the main hospital 1.5 KM. The links will terminate on two core switches in the hospital.

The customer also requires:

- 99.999% uptime for this life-critical environment.
- Planned and unplanned downtime has to be minimized.
- Software upgrades are only allowed once per year with close to zero downtime.
- All life-critical resources are accessed locally, and all resources exist within the hospital campus.
- Waratah Hospital requires a highly secure environment for the data center. Encrypted wire speed connectivity between the data room and the hospital is a must-have because the link between the buildings crosses a public road.
- Waratah Hospital has a mix of virtualized (vSphere) servers. Nutanix storage, bare metal servers, backup servers and other devices.

In the past, the hospital has had a security breach that resulted in data loss, network downtime, and identity theft.

Refer to the scenario. Given the requirement for integration with ServiceNow, which CX feature provides automatic ticket creation in ServiceNow based on network events?

- A. NAE
- B. REST API
- C. SOAP
- D. probe

**Answer: A**

Explanation:

Network Analytics Engine can react to network events and support automated workflows such as ServiceNow ticket creation.

#### NEW QUESTION # 41

You are delivering a spine and leaf architecture based on 18 CX 8360-48Y6C v2 leaf switches and two CX 8325-32C spine switches. The leaf switches support servers with 10 and 25 GbE ports. Currently you are planning to use two 100 Gbps uplinks per leaf switch. The customer returns with the requirement to increase the uplink bandwidth by at least 50% per leaf switch.

What is a valid change to the plan?

- A. Add another 100 GbE link to each leaf switch. One switch in each VSX pair connects to spine 1, and one switch connects to spine 2.
- B. Add another 100 GbE link between each leaf switch and both spine switches
- C. Add a third CX 8325-32C switch and connect it to each leaf switch with a 100 GbE link
- D. Convert both uplinks on each leaf switch (and connected spine switches) to 200 GbE links

**Answer: C**

Explanation:

Each leaf currently has  $2 \times 100\text{GbE uplinks} = 200\text{Gbps}$ . Adding a third spine with one 100GbE link from each leaf increases each leaf to 300Gbps, meeting the 50% increase requirement. The CX 8325-32C has enough ports to connect to all 18 leaves.

#### NEW QUESTION # 42

What is the primary purpose of conducting a "current state assessment" before beginning a data center network design?

- A. To establish a documented baseline of existing infrastructure, traffic patterns, and pain points that informs design decisions
- B. To generate a sales quote immediately
- C. To finalize the bill of materials before requirements are gathered
- D. To replace the need for stakeholder interviews

**Answer: A**

Explanation:

A current state assessment creates a factual baseline (topology, traffic flows, capacity, known issues) that the new design must

account for or improve upon. It is not a substitute for interviews, nor should it precede requirements gathering in the overall process, nor is it a sales tool.

### NEW QUESTION # 43

You are designing an L3 spine and leaf topology that uses CX switches. Those switches implement EVPN VXLAN. The customer does not require VRF segmentation for any of the data center endpoint traffic. What should you recommend for the VRF in which to place the SVIs for server, VM and other endpoint VLANs?

- A. Use whichever VRF the switch individual loopback interface is attached to
- B. Use any VRF name except default
- C. Use whichever VRF the switch VXLAN loopback interface is attached to
- **D. Use the default VRF**

**Answer: D**

Explanation:

If the customer does not need VRF-based segmentation for endpoint traffic, the server/VM VLAN SVIs can be placed in the default VRF rather than creating separate overlay tenant VRFs.

### NEW QUESTION # 44
