Microsoft SC-401 Valid Test Test | Trustworthy SC-401 Source

Free4Dump wants to win the trust of Administering Information Security in Microsoft 365 (SC-401) exam candidates at any cost. To achieve this objective Free4Dump is offering real, updated, and error-free Administering Information Security in Microsoft 365 (SC-401) exam dumps in three different formats. These Administering Information Security in Microsoft 365 (SC-401) exam questions formats are Free4Dump Microsoft SC-401 dumps PDF files, desktop practice test software, and web-based practice test software.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
Topic 2	<ul style="list-style-type: none"> • Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
Topic 3	<ul style="list-style-type: none"> • Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.
Topic 4	<ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q94-Q99):

NEW QUESTION # 94

Hotspot Question

You have a Microsoft 365 sensitivity label that is published to all the users in your Microsoft Entra tenant as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

Explanation:

Explanation:

Statement 1 - No. The sensitivity label includes content marking (watermark: INTERNAL), but it only applies to documents where the label is manually or automatically applied, not to all documents by default.

Statement 2 - No. The sensitivity label only specifies a watermark, not a header. If a header marking was configured, it would explicitly appear in the label settings.

Statement 3 - No. There is no indication that auto-labeling is configured to apply the label only to documents with the word "rebranding". Auto-labeling is an optional setting that needs explicit configuration.

NEW QUESTION # 95

You are implementing Microsoft Purview Advanced Message Encryption for a Microsoft 365 tenant named contoso.com. You need to meet the following requirements:

* All email to a domain named fabrikam.com must be encrypted automatically.

* Encrypted emails must expire seven days after they are sent.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Requirement 1 - Encrypt all email to fabrikam.com automatically

To force encryption for mail sent to a specific external domain (fabrikam.com):

You configure a mail flow rule (transport rule) in the Exchange admin center (EAC).

This rule can apply Office Message Encryption (OME) automatically when messages match conditions such as recipient domain.

Reference: Define mail flow rules to encrypt email messages

Correct choice: A mail flow rule in the Exchange admin center

Requirement 2 - Encrypted emails must expire after 7 days

To configure expiration and access control over encrypted emails:

You use Microsoft Purview sensitivity labels with encryption settings.

A label policy in the Purview portal can enforce encryption, set access rights, and define expiration (e.g., revoke access after 7 days).

Sensitive info types or mail flow rules cannot configure expiration.

Reference: Configure encryption settings for sensitivity labels

Correct choice: A label policy in the Microsoft Purview portal

NEW QUESTION # 96

You have a Microsoft 365 E5 subscription.

You are implementing insider risk management.

You need to create an insider risk management notice template and format the message body of the notice template.

How should you configure the template? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 97

You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint Online site named Site1.

You need to deploy a Microsoft Purview insider risk management solution that will generate an alert when users share sensitive information on Site1 with external recipients.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct answer is worth one point.

- A. Create an insider risk policy.
- B. Turn on analytics.
- C. Configure adaptive protection.
- D. Create a data loss prevention (DLP) policy.
- E. Turn on Indicators.

Answer: A,E

NEW QUESTION # 98

You have a Microsoft SharePoint Online site named Site1 that contains a document library. The library contains more than 1,000 documents. Some of the documents are job applicant resumes.

All the documents are in the English language.

You plan to apply a sensitivity label automatically to any document identified as a resume. Only documents that contain work experience, education, and accomplishments must be labeled automatically.

You need to identify and categorize the resumes. The solution must minimize administrative effort.

What should you include in the solution?

- A. a trainable classifier
- B. a keyword dictionary
- C. an exact data match (EDM) classifier
- D. a function

Answer: A

Explanation:

Since you need to automatically apply a sensitivity label to resumes based on their content and structure (work experience,

education, accomplishments), a trainable classifier is the best choice.

Trainable classifiers use machine learning to identify unstructured data, such as resumes, contracts, or legal documents. Instead of relying on predefined patterns (like keywords or regular expressions), a trainable classifier learns from sample documents and can accurately identify resumes even if they are formatted differently.

Final Approach:

- Train a trainable classifier using sample resumes.
- Deploy the classifier in Microsoft Purview.
- Configure a sensitivity label to be automatically applied when a document matches the classifier.

NEW QUESTION # 99

.....

By adhering to the principle of “quality first, customer foremost”, and “mutual development and benefit”, our company will provide first class service for our customers. As a worldwide leader in offering the best SC-401 exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What’s more, we have achieved breakthroughs in SC-401 Study Materials application as well as interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our SC-401 exam questions. Any time is available; our responsible staff will be pleased to answer your question whenever and wherever you are.
