## **Don't Miss Up to 1 year of Free Updates – Buy Salesforce Data-Architect Dumps Now**

The world is rapidly moving forward due to the prosperous development of information. Our company is also making progress in every side. The first manifestation is downloading efficiency. A lot of exam candidates these days are facing problems like lacking of time, or lacking of accessible ways to get acquainted with high efficient Data-Architect Guide question like ours. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our Data-Architect exam dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.

## Salesforce Certified Data Architect Sample Questions (Q249-Q254):

### NEW QUESTION # 249

UC has millions of case records with case history and SLA data. UC's compliance team would like historical cases to be accessible for 10 years for Audit purpose.

What solution should a data architect recommend?

- A. Use a custom object to store archived case data.
- **B. Use a custom Big object to store archived case data.**
- C. Purchase more data storage to support case object
- D. Archive Case data using Salesforce Archiving process

**Answer: B**

Explanation:

The best solution to store historical cases for 10 years for audit purpose is to use a custom Big object to store archived case data. Big objects are a type of custom object that can store massive amounts of data on the Salesforce platform without affecting performance or storage limits. They also support point-and-click tools, triggers, and Apex code. Big objects can be used for archiving historical data that needs to be retained for compliance or analytics purposes<sup>3</sup>. Archiving case data using Salesforce Archiving process is not a good option because it only supports archiving cases that are closed for more than one year, and it does not allow customizing the archival criteria or accessing the archived data via Apex or APIs<sup>4</sup>. Purchasing more data storage to support case object is expensive and may impact performance. Using a custom object to store archived case data is not scalable and may consume a lot of storage space.

### NEW QUESTION # 250

Universal Containers (UC) wants to store product data in Salesforce, but the standard Product object does not support the more complex hierarchical structure which is currently being used in the product master system. How can UC modify the standard Product object model to support a hierarchical data structure in order to synchronize product data from the source system to Salesforce?

- A. Create an Apex trigger to synchronize the Product Family standard picklist field on the Product object.
- B. Create a custom lookup field on the standard Product to reference the child record in the hierarchy.
- C. Create a custom master-detail field on the standard Product to reference the child record in the hierarchy.
- **D. Create a custom lookup field on the standard Product to reference the parent record in the hierarchy.**

**Answer: D**

Explanation:

Creating a custom lookup field on the standard Product to reference the parent record in the hierarchy is the correct way to modify the standard Product object model to support a hierarchical data structure. This allows UC to create a self-relationship on the Product object and define parent-child relationships among products.

### NEW QUESTION # 251

Universal Containers has a public website with several forms that create Lead records in Salesforce using the REST API. When designing these forms, which two techniques will help maintain a high level of data quality?

- A. Use cookies to track when visitors submit multiple forms.
- B. Ensure the website visitor is browsing using an HTTPS connection.
- **C. Prefer picklist form fields over free text fields, where possible.**
- **D. Do client-side validation of phone number and email field formats.**

**Answer: C,D**

### NEW QUESTION # 252

DreamHouse Realty has a Salesforce deployment that manages Sales, Support, and Marketing efforts in a multi-system ERP environment. The company recently reached the limits of native reports and dashboards and needs options for providing more analytical insights.

What are two approaches an Architect should recommend? (Choose two.)

- A. Einstein Analytics
- B. Weekly Snapshots
- C. AppExchange Apps
- D. Setup Audit Trails

Answer: A,C

### NEW QUESTION # 253

During the implementation of Salesforce, a customer has the following requirements for Sales Orders:

1. Sales Order information needs to be shown to users in Salesforce.
2. Sales Orders are maintained in the on-premises enterprise resource planning (ERP).
3. Sales Order information has more than 150 million records.
4. Sales Orders will not be updated in Salesforce.

What should a data architect recommend for maintaining Sales Orders in Salesforce?

- A. Use custom big objects to maintain Sales Orders in Salesforce.
- B. Use external objects to maintain Sales Order in Salesforce.
- C. Use custom objects to maintain Sales Orders in Salesforce.
- D. Use Standard order object to maintain Sales Orders in Salesforce

Answer: B

### NEW QUESTION # 254

.....

Which kind of Data-Architect certificate is most authorized, efficient and useful? We recommend you the Data-Architect certificate because it can prove that you are competent in some area and boost outstanding abilities.
