Salesforce Certified Data Architect Sample Questions (Q181-Q186):

NEW QUESTION # 181

What 2 data management policies does the data classification feature allow customers to classify in salesforce? Choose 2 answers:

- A. Data governance policy.
- B. Compliance categorization policy.
- C. Reference data policy.
- D. Data sensitivity level

Answer: B,D

NEW QUESTION # 182

NTO has decided that it is going to build a channel sales portal with the following requirements:

1. External resellers are able to authenticate to the portal with a login.
2. Lead data, opportunity data and order data are available to authenticated users.
3. Authenticated users many need to run reports and dashboards.
4. There is no need for more than 10 custom objects or additional file storage.

Which community cloud license type should a data architect recommend to meet the portal requirements?

- A. Lightning external apps starter.
- B. Partner community.
- C. Customer community.
- D. Customer community plus.

Answer: B

NEW QUESTION # 183

DreamHouse Realty has 15 million records in the Order_c custom object. When running a bulk query, the query times out. What should be considered to address this issue?

- A. PK Chunking
- B. Tooling API
- C. Streaming API
- D. Metadata API

Answer: A

Explanation:

PK Chunking is a feature of the Bulk API that allows splitting a large query into smaller batches based on the primary key of the object. This can improve the performance and avoid query timeouts when querying large data sets

NEW QUESTION # 184

Universal Containers is creating a new B2C service offering for consumers to ship goods across continents. This is in addition to their well-established B2B offering. Their current Salesforce org uses the standard Account object to track B2B customers. They are expecting to have over 50,000,000 consumers over the next five years across their 50 business regions. B2C customers will be individuals. Household data is not required to be stored. What is the recommended data model for consumer account data to be stored in Salesforce?

- A. Use the Account object with Person Accounts and a new B2C page layout.
- B. Use the Account object with a newly created Record Type for B2C customers.
- C. Use 50 umbrella Accounts for each region, with customers as associated Contacts.
- D. Create a new picklist value for B2C customers on the Account Type field.

Answer: A

Explanation:

The recommended data model for consumer account data to be stored in Salesforce is to use the Account object with Person Accounts and a new B2C page layout. Person Accounts are a special type of accounts that allow you to store information about individual consumers who are not associated with a business account². Person Accounts have the following advantages³:

They allow you to use the same standard objects and features that you use for business accounts, such as contacts, opportunities, cases, etc.

They enable you to create different page layouts and record types for B2C and B2B customers, which allows you to customize the user interface and business logic for each segment.

They support large data volumes and can scale up to 50 million records or more, which meets the expected growth of consumers over the next five years.

NEW QUESTION # 185

A customer wants to maintain geographic location information including latitude and longitude in a custom object. What would a data architect recommend to satisfy this requirement?

- A. Create formula fields with geolocation function for this requirement.
- **B. Create custom fields to maintain latitude and longitude information**
- C. Recommend app exchange packages to support this requirement.
- D. Create a geolocation custom field to maintain this requirement

Answer: B

NEW QUESTION # 186

.....
