So far, EMT free download pdf has been the popular study material many candidates prefer. EMT questions & answers can assist you to make a detail study plan with the comprehensive and detail knowledge. Besides, we have money refund policy to ensure your interest in case of your failure in EMT Actual Test. Additional, if you have any needs and questions about the NREMT test dump, our 24/7 will

always be here to answer you.

There are Candidates must know the topics before they start of preparation.

Our **Test Prep EMT Exam Dumps** will include the following topics:

- Trauma 21%
- Cardiology and Resuscitation 19%
- Airway, Respiration, and Ventilation 20%
- EMS Operations 12%
- Medical / Obstetrics / Gynecology 28%

NREMT Emergency Medical Technicians Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

You have consulted with on-line medical direction to terminate resuscitation of a 74-year-old female.

How should you inform her family of this decision?

- A. "She has passed."
- B. "She has died."
- C. "She didn't make it."
- D. "She is at peace."

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

EMS professionals are expected to use empathetic yet clear language when communicating a death. The phrase "She has passed" is both respectful and commonly accepted as an appropriate way to convey death compassionately without being overly clinical or harsh. "Died" may sound too blunt in an emotional moment, while "didn't make it" and "at peace" can feel vague or dismissive. Clear, empathetic communication is critical for patient dignity and family support during death notifications.

NEW QUESTION # 30

A 30-year-old patient has a stab wound to the left forearm that is bleeding profusely. Which of the following interventions should the EMT perform first?

- A. Determine severity of wound
- B. Place a tourniquet
- C. **Apply direct pressure**
- D. Assess the airway

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The first step in hemorrhage control for external bleeding is always direct pressure using gloved hands or dressing. Only if this fails or the bleeding is severe and life-threatening (especially from extremities) should a tourniquet be applied.

Assessing the airway is critical in overall trauma care but not the first priority in isolated extremity hemorrhage. Severity assessment is secondary to bleeding control.

NEW QUESTION # 31

Which of the following elements proves tort negligence in a court of law?

- A. Causation
- B. Abandonment
- C. False imprisonment
- D. Assault and battery

Answer: A

NEW QUESTION # 32

Following an EMS call, any requests concerning protected health information should be directed to the

- A. Receiving hospital
- B. Privacy officer
- C. Shift supervisor
- D. Quality assurance officer

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Under HIPAA (Health Insurance Portability and Accountability Act), only designated personnel are authorized to handle inquiries regarding a patient's Protected Health Information (PHI). The Privacy Officer is responsible for enforcing compliance with privacy regulations and addressing PHI access requests.

Shift supervisors or hospitals do not have the legal authority to release PHI unless specifically designated.

NEW QUESTION # 33

Which of the following signs and symptoms indicate dehydration in an infant? Select the three correct options.

- A. Delayed capillary refill
- B. Poor skin turgor
- C. Sunken fontanelles
- D. Hypoglycemia
- E. Flushed, dry skin
- F. Hypertension

Answer: A,B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Dehydration signs in infants include:

- * Poor skin turgor(elasticity)
- * Sunken fontanelles(indicative of fluid loss)
- * Delayed capillary refill(>2 seconds)

Flushed skin is more common in fever or heat illness, not dehydration. Hypotension, not hypertension, is associated with dehydration in late stages.
