PL-600 Premium Files | PL-600 Reliable Exam Preparation

We can produce the best PL-600 exam prep and can get so much praise in the international market. On the one hand, the software version can simulate the real examination for you and you can download our PL-600 study materials. On the other hand, you can finish practicing all the contents in our PL-600 practice materials within 20 to 30 hours. What's more, during the whole year after purchasing, you will get the latest version of our study materials for free. You can see it is clear that there are only benefits for you to buy our PL-600 learning guide, just have a try right!

To pass the Microsoft PL-600 exam, candidates need to have a solid understanding of the Power Platform architecture, data modeling, and security concepts. They should also be familiar with the Common Data Service, Power Apps portals, and AI Builder. PL-600 Exam consists of 40-60 multiple-choice questions, and candidates have 150 minutes to complete it. The passing score for the exam is 700 out of 1000.

Microsoft Power Platform Solution Architect Sample Questions (Q231-Q236):

NEW QUESTION # 231

A company is creating a Power Platform solution to manage employees.

The company has the following requirements:

Allow only the human resource manager to change an employee's employment status when an employee is dismissed.

Allow only approved device types to access the solution and company data.

You need to recommend a solution that meets the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Configuration
Allow only the human resource manager to change an employee's employment status when an employee is dismissed.	<div>Team access</div> <div>Privacy preference</div> <div>Field security profile</div> <div>Hierarchy security profile</div>
Allow only approved device types to access the solution and company data.	<div>Endpoint security</div> <div>Compliance policy</div> <div>Conditional access</div> <div>Mobile threat integration</div>

Answer:

Explanation:

Requirement	Configuration
Allow only the human resource manager to change an employee's employment status when an employee is dismissed.	<div>Team access</div> <div>Privacy preference</div> <div>Field security profile</div> <div>Hierarchy security profile</div>
Allow only approved device types to access the solution and company data.	<div>Endpoint security</div> <div>Compliance policy</div> <div>Conditional access</div> <div>Mobile threat integration</div>

NEW QUESTION # 232

You are designing a business strategy for a client who has a Power Platform solution.

The client works with critical data where any data loss creates a high risk.

You need to document the failover process for the stakeholders.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

If the second call is successful,
the application continues normally.

The application makes a service call
to the datacenter.

The application receives an exception
after attempting the service call.

The application automatically tries
the call again.

The application redirects calls to
an on-premises server.

Answer Area

Answer:

Explanation:

Actions	Answer Area
If the second call is successful, the application continues normally.	The application makes a service call to the datacenter.
The application makes a service call to the datacenter.	The application receives an exception after attempting the service call.
The application receives an exception after attempting the service call.	The application redirects calls to an on-premises server.
The application automatically tries the call again.	If the second call is successful, the application continues normally.
The application redirects calls to an on-premises server.	

Explanation:

The application makes a service call to the datacenter.
The application receives an exception after attempting the service call.
The application redirects calls to an on-premises server.
If the second call is successful, the application continues normally.

NEW QUESTION # 233

Case Study 1 - First Up Consulting

Background

First Up Consulting recruits information technology (IT) workers for temporary or permanent positions at client companies. The company operates offices in multiple countries/regions.

First Up has both full-time and part-time employees. The company has a team of worker support agents that respond to inquiries from current and prospective workers. Some of the worker support agents are multilingual.

The company does not have a standardized tool used for reporting purposes. The organization engages you to implement a new Power Platform solution. Workers are managed by a dedicated team that includes one primary recruiter and a contract assistant. Many client companies live in areas that do not allow for mobile data connections.

Current environment

Existing systems and processes

First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.

The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.

Employee authentication with the existing system is provided by an on-premises Active Directory instance that is linked to Azure Active Directory.

An appointment record is created for each visit with a worker. The record includes worker contact information, preferred language, the date and time of the appointment, and other relevant data. This information is reviewed by the worker's primary recruiter.

First Up has no current capabilities for forecasting future worker needs based on the data held.

Client company visits

Before First Up signs a contract to place workers at a client company, a member of the audit team visits the company and interviews company management. Audit members use different types of devices including Android and iOS devices. First Up has no plans to require the use of a single type of device. Audit team members currently record information about workers on paper forms. Team members enter information from paper forms into the system when they return to the office.

First Up audits client companies at least once each year but may schedule additional visits based on feedback from workers that they place at a client company.

Requirements

General

There is no standardized communication tool across the company, and this causes communication issues between different teams.

First up employees must be able to contact each other by using a secure system to ask and answer questions about medical cases.

Workers must be able to communicate in near real-time with worker support agents.

Client company visits

Audit team records must be locked after they have been reviewed by a First Up manager. No further edits to the record can be carried out. This must be implemented using standard available system functionality.

Audit teams must be able to enter records of their visits to the companies where they have or may place workers. Audit teams must be able to update any necessary records with the latest information.

The solution must support tracking of security clearance information for a worker including the date, status, and certifying agency.

When a worker makes an appointment, the appointments must appear in the timeline for the worker's contact record.

Job history information

The solution must provide a worker appointment booking system that can access worker historical job placement data.

The solution must allow employees to associate a primary recruiter with each worker. The solution must also allow multiple secondary recruiters to be associated with each worker.

Every worker assessment performed must be validated and countersigned by the primary recruiter for a worker.

Job posting data from previous work engagements must be accessible by the Power Platform solution to ensure that new job postings are accurate.

First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

Worker access

The solution must support workers that speak different languages. The solution must provide automatic translation capabilities.

The solution must support near real-time communications between workers and recruiters.

Workers must be able to view their records online. Workers must be able to enter any additional information that is required by or may be helpful to recruiters.

The solution must provide workers a way to search for general information about available positions.

Workers must be able to request copies of their records by using a chatbot. Workers must be able to provide information to a recruiter as needed.

Data platform

Audit teams must have the ability to view worker information on their mobile devices.

Audit teams must be able to record data during visits to locations where workers are placed.

The solution must support the ability for a corporate governance auditing team to periodically audit the organization's records, policies, and procedures.

Reporting and analytics

The reporting and analytics team must be able to create reports that include data from all facilities and all workers.

Management reports must present an overview of the entire organization. Other reports may be limited to specific offices.

You must create dashboards that show the status across all groups of workers. The dashboards must be embedded into the Power Platform apps. Updates to data must be displayed in near real time.

Security

Authentication for all user types must be managed by a single platform. IT teams must use PowerShell to apply security permissions for users.

Worker records must only be viewed by the recruiting office that the worker visits.

Worker still records must be archived after ten years and are then removed from the main system. Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.

User security roles must be customized to ensure that users are able to interact only with the specific data in which they need access.

Workers must be able to sign into a portal by using their own email address. Workers must be required to use a secure method of authentication to be able to view their data.

Alerts regarding the number of recruited and placed at client companies must be updated as background processes.

Issues

The organization reports the following issues:

Recruiters report that they cannot see historical job placement data for workers.

API usage reports show that the number of API calls made exceeds limits. This causes delays saving data.

Users cannot view Power BI reports within the Power Platform apps.

Some security clearance information for workers not visible from within the Power Platform solution.

Audit teams report that they cannot view or edit worker data when the device on which they access the solution does not have network connectivity.

The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

You need to investigate the canvas app functionality issues.

Which two tools can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Errors function
- B. App checker
- C. Power Platform admin center
- D. Solution checker

Answer: B,D

Explanation:

Scenario: The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

A: The App checker is now available to help provide a clear list of formula issues in your app, and to provide items to fix to make your app accessible. The App checker is an area that the PowerApps team will continue to invest in, and build on in order help to make debugging, performance and best practice decisions an easier and more guided experience.

C: With the solution checker feature, you can perform a rich static analysis check on your solutions against a set of best practice rules and quickly identify these problematic patterns. After the check completes, you receive a detailed report that lists the issues identified, the components and code affected, and links to documentation that describes how to resolve each issue.

NEW QUESTION # 234

You are designing a Microsoft Power Platform solution for a company that has multiple Microsoft Dataverse environments.

You need to prevent specific users from accessing specific environments.

What should you do?

- A. Remove all security roles from the users of the specific environments.
- B. Remove the user from all security groups.
- C. Remove the user from all teams.
- D. Remove the user from the business unit.

Answer: A

Explanation:

Microsoft Dataverse uses a role-based security model to help secure access to the database. Security roles can be used to configure environment-wide access to all resources in the environment.

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/database-security>

NEW QUESTION # 235

An animal welfare organization wants to track the movement of wolf packs in a region. Cameras at specific locations capture images when motion is detected within the camera sensor range. Staff upload the images manually to a shared drive and then analyze the images.

The organization wants to automate image capture and analysis. The organization has the following requirements:

- * Save captured images in an appropriate location.
- * Analyze saved images by using an image recognition process.
- * Display data in real-time dashboards.

You need to recommend the correct technology for the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Technology option
Save captured images in an appropriate location.	<div><div>▼</div><div>Business process flow</div><div>Desktop flow</div><div>Instant cloud flow</div><div>Automated cloud flow</div></div>
Analyze saved images by using an image recognition process.	<div><div>▼</div><div>Instant cloud flow and AI Builder</div><div>Automated cloud flow and AI Builder</div><div>Desktop flow and AI Builder</div></div>
Display data in real-time dashboards.	<div><div>▼</div><div>Dynamics 365 interactive experience dashboard</div><div>Model-driven app dashboard with native graphs</div><div>Model-driven app dashboard with Power BI</div></div>

Answer:

Explanation:

Requirement	Technology option
Save captured images in an appropriate location.	<div>Business process flow</div> <div>Desktop flow</div> <div>Instant cloud flow</div> <div>Automated cloud flow</div>

Explanation:

Requirement	Technology option
Save captured images in an appropriate location.	<div>Business process flow</div> <div>Desktop flow</div> <div>Instant cloud flow</div> <div>Automated cloud flow</div>
Analyze saved images by using an image recognition process.	<div>Instant cloud flow and AI Builder</div> <div>Automated cloud flow and AI Builder</div> <div>Desktop flow and AI Builder</div>
Display data in real-time dashboards.	<div>Dynamics 365 interactive experience dashboard</div> <div>Model-driven app dashboard with native graphs</div> <div>Model-driven app dashboard with Power BI</div>

Box 1: Automated cloud flow.

Create a cloud flow when you want your automation to be triggered either automatically, instantly, or via a schedule.

Automated flows: Create an automation that is triggered by an event such as arrival of an email from a specific person, or a mention of your company in social media.

Box 2: Desktop flow and AI Builder

Desktop flows are used to automate tasks on the Web or the desktop. Using Power Automate Desktop you can automate tasks on the desktop as well as the Web.

Box 3: Model-driven app dashboard with Power BI

The Power BI cloud service works with Microsoft Dataverse apps to provide a self-service analytics solution.

Power BI automatically refreshes the app's data displayed.
