With the certified advantage admitted by the

test Plat-Dev-301 Certification, you will have the competitive edge to get a favorable job in the global market. Here our Plat-Dev-301 exam braindumps are tailor-designed for you.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q179-Q184):

### NEW QUESTION # 179

A developer has a Visualforce page that automatically assigns ownership of an Account to a queue upon save. The page appears to correctly assign ownership, but an assertion validating the correct ownership fails. What can cause this problem?

- A. The test class does not retrieve the updated value from the database,
- B. The test class does not use the `seeAllData=true` annotation.
- C. The test class does not implement the `Queueable` interface.
- D. The test class does not use the Bulk API for loading test data.

**Answer: A**

Explanation:

If the test class does not retrieve the updated value from the database, it will not see any changes made by the page logic. This can cause assertions that check for those changes to fail. The test should query for the most recent value from the database after the operation that is supposed to update the value.

### NEW QUESTION # 180

Consider the above trigger intended to assign the Account to the manager of the Account's region, Which two changes should a developer make in this trigger to adhere to best practices?

- A. Use a Map to cache the results of the `Region__c` query by Id.
- B. Remove the last line updating `accountList` as It Is not needed.
- C. Use a Map `accountMap` instead of List `accountList`.
- D. Move the `Region__c` query to outside the loop.

**Answer: B,D**

Explanation:

Moving the SOQL query outside the loop prevents it from being executed multiple times, which can lead to hitting governor limits. The last line updating the `accountList` is indeed needed to save the changes made to the Account records, so removing it is not recommended. Instead, the query should be moved outside the loop and records should be collected in a map for efficiency, which is not one of the provided options. Reference: Apex Developer Guide - Best Practices for Apex

### NEW QUESTION # 181

Universal Containers stores user preferences in a Hierarchy Custom Setting, `User_Prefs__c`, with a Checkbox field, `Show_Help__c`. Company-level defaults are stored at the organizational level, but may be overridden at the user level. If a user has not overridden preferences, then the defaults should be used.

How should the `Show_Help__c` preference be retrieved for the current user?

- A. `Boolean show = User_Prefs__c.getValues().Show_Help__c;`
- B. `Boolean show = User_Prefs__c.getInstance().Show_Help__c;`
- C. `Boolean show = User_Prefs__c.getValues(UserInfo.getUserId()).Show_Help__c;`
- D. `Boolean show = User_Prefs__c.Show_Help__c;`

**Answer: B**

Explanation:

To retrieve the `Show_Help__c` preference for the current user from a hierarchy custom setting, the `getInstance()` method should be used. This method retrieves the custom setting data for the user or the organization default if no user-specific setting is found.

### NEW QUESTION # 182

A company has a custom component that allows users to search for records of a certain object type by invoking an Apex Controller that returns a list of results based on the user's input. When the search is completed, a searchComplete event is fired, with the results put in a results attribute of the event. The component is designed to be used within other components and may appear on a single page more than once.

What is the optimal code that should be added to fire the event when the search has completed?

- A)
- B)
- C)
- D)

- A. Option C
- **B. Option B**
- C. Option D
- D. Option A

**Answer: B**

Explanation:

The correct code to fire the event when the search has completed in a Lightning component is option B.

`$.get("e.c.searchComplete")` is the syntax used to get the event, `setParams` is used to set the parameters, and `fire` is used to dispatch the event.

### NEW QUESTION # 183

Universal Containers is leading a development team that follows the source-driven development approach in Salesforce. As part of their continuous integration and delivery (CI/CD) process, they need to automatically deploy changes to multiple environments, including sandbox and production.

Which mechanism or tool would best support their CI/CD pipeline in source-driven development?

- A. Change Sets
- B. Salesforce Extensions for Visual Studio Code
- **C. Salesforce CLI with Salesforce DX**
- D. Ant Migration Tool

**Answer: C**

Explanation:

Salesforce CLI with Salesforce DX supports source-driven development and is designed for continuous integration and delivery (CI/CD) processes. It enables developers to automate deployments across multiple environments, including sandbox and production.

### NEW QUESTION # 184

.....

Our Plat-Dev-301 study materials just need you to memorize all keypoints of the knowledge of the real exam. It is unnecessary to review all irrelevant knowledges. At present, our Plat-Dev-301 exam questions have helped thousands of people pass the exam and obtain the certificate. Also, the passing rate of our Plat-Dev-301 Training Materials is the highest according to our investigation. None of the other exam braindumps in the market has the pass rate high as 98% to 100% as our Plat-Dev-301 learning quiz.
