HCL Software Academy HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 Sample Questions (Q34-Q39):

NEW QUESTION # 34

Which two server tasks are required to maintain mail routing and directory synchronization? (Choose two)

- A. HTTP
- **B. Router**
- C. Dircat
- **D. AdminP**

Answer: B,D

Explanation:

To maintain a functional mail and administrative environment, two core tasks are essential. The Router task is responsible for the

actual delivery and transfer of messages between users and servers, which is the heart of mail routing . The AdminP (Administration Process) task handles the background synchronization of directory changes-such as user renames or deletions-ensuring that the Domino Directory remains synchronized and accurate across all servers in the domain.

NEW QUESTION # 35

What is the role of the AdminP task in a Domino domain?

- A. Route SMTP messages
- B. Monitor server hardware
- C. Automate administrative requests
- D. Generate DAOS attachments

Answer: C

Explanation:

The Administration Process (AdminP) is a core server task in HCL Domino designed to automate administrative requests that would otherwise require manual intervention. When an administrator makes a change in the Domino Directory-such as renaming a user, deleting a group, or moving a mail file-the request is posted to the Administration Requests database (admin4.nsf). AdminP then processes these requests across all servers in the domain, ensuring that Access Control Lists (ACLs), person documents, and reader /author fields are updated automatically to maintain domain-wide consistency.

NEW QUESTION # 36

Which two types of configuration documents are created or modified during Domino server setup? (Choose two)

- A. Configuration Settings document
- B. Person document
- C. Database ACL document
- D. Server document

Answer: A,D

Explanation:

During the initial configuration of a Domino server, the setup utility prepares the Domino Directory by creating or modifying core documents. These include the Server document , which identifies the server and its specific network/security settings , and the Configuration Settings document , which is used to manage settings for tasks like mail routing and MIME across one or more servers in the domain.

NEW QUESTION # 37

Where are DAOS objects physically stored on the server?

- A. In the Domino Directory
- B. Inside the mail.box file
- C. In the ddm.nsf file
- D. In the designated DAOS base path directory

Answer: D

Explanation:

The Domino Attachment and Object Service (DAOS) works by extracting file attachments from standard NSF databases and storing them as separate objects. These objects (files with a .NLO extension) are physically stored in a designated DAOS base path directory on the server's file system. This path is defined in the Server document, and within it, DAOS creates a series of subdirectories to organize the objects efficiently and prevent any single folder from containing too many files.

NEW QUESTION # 38

Which two actions can be initiated via the AdminP interface? (Choose two)

- A. Move mail file to a new server
- B. Enable Smart Upgrade policies
- C. Convert Notes documents to PDF
- D. Rename a user across replicas

Answer: A,D

Explanation:

AdminP is designed to automate complex, multi-server tasks. Renaming a user is a primary function, as it requires updating the Directory, ACLs, and Reader/Author fields across the entire domain. Moving a mail file to a new server is another key function; AdminP automates the creation of the new replica, the synchronization of data, and the eventual deletion of the old mail file, while simultaneously updating the user's Person document to point to the new location.
