## ChromeOS-Administrator Exam Cram | Valid ChromeOS-Administrator Study Materials

When you decide to buy Dupleader actual Google ChromeOS-Administrator exam dumps, you automatically boost your chances of Professional ChromeOS Administrator Exam ChromeOS-Administrator exam success. In Google ChromeOS-Administrator exam product, you can encounter Google ChromeOS-Administrator exam questions that are present in the Google ChromeOS-Administrator certification exam. This helps you memorize actual ChromeOS-Administrator exam questions beforehand and clear the ChromeOS-Administrator Certification test on the first attempt. We offer ChromeOS-Administrator real questions in Google ChromeOS-Administrator PDF questions files, ChromeOS-Administrator desktop practice test software, and web-based practice exam. Read on to learn more about the top features of our Professional ChromeOS Administrator Exam ChromeOS-Administrator PDF dumps file, desktop Google ChromeOS-Administrator practice exam software, and a web-based ChromeOS-Administrator practice test.

## Google Professional ChromeOS Administrator Exam Sample Questions (Q90-Q95):

### NEW QUESTION # 90

An admin is setting up third-party SSO for their organization as the super admin. When they test with their account, they do not see the SSO screen.

What is causing this behavior?

- A. Third-party SSO is not enabled
- B. The account is in the wrong OrgUnit

- C. Super admin bypassed the third-party
- D. SSO settings are misconfigured

**Answer: C**

Explanation:

Super administrators in Google Workspace have special privileges that allow them to bypass certain security features, including third-party SSO. This is to ensure that they can always access the Admin console for troubleshooting or critical changes, even if the SSO system is malfunctioning. Therefore, when a super admin tests third-party SSO, they won't be prompted with the SSO login screen, but will directly access the console using their Google credentials.

#### NEW QUESTION # 91

You're in charge of deploying video conferencing equipment and it has been decided that you will leverage ChromeOS devices. What initial considerations should you make when deciding on devices?

- A. Deploying instructional guides to all users on setup configuration, and use of new equipment
- B. Devices must have 8GB of RAM and obey supported processor models
- C. A form factor compatible for both remote and site workers is required
- D. A precise time window on how to apply security patches and updates to all devices

**Answer: C**

#### NEW QUESTION # 92

As a ChromeOS Administrator, you are tasked with blocking incognito mode in the ChromeOS Browser. How would you prevent users from using incognito mode?

- A. In "Enrollment Settings", disable verified access and incognito mode for content protection.
- B. From "Device Settings", change Kiosk settings to "Disallow incognito mode."
- C. Go to "User & Browser Settings" to restrict sign-in to pattern and "Disallow incognito mode."
- D. Navigate to "Users & Browser Security Settings" and set the "Disallow incognito mode" policy.

**Answer: D**

Explanation:

To block incognito mode in ChromeOS, administrators need to configure the policy under "Users & Browser Security Settings". The specific policy to disable incognito mode ensures that users can only browse in regular mode, allowing for better tracking and compliance.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Policies Guide, which details managing incognito mode via User & Browser settings.

"To disable incognito mode, go to Admin console > Devices > Chrome > Settings > Users & browsers > Security settings, and select 'Disallow incognito mode'." Disabling incognito mode is essential for compliance and security, especially in educational and enterprise environments where browsing history must be retained.

Objectives:

- \* Manage browser settings for security compliance.
- \* Disable incognito mode on ChromeOS devices.

#### NEW QUESTION # 93

Your network administrator wants to block Google services traffic. What is the result?

- A. Google Search will not work
- B. Nothing This isn't an issue
- C. Chrome devices will not be able to reach Google
- D. Chrome devices will crash

**Answer: A**

Explanation:

Blocking Google services traffic will prevent Chrome devices from accessing any Google-owned domains, including google.com. This will directly impact Google Search, as it relies on communication with Google servers to provide results. Other Google services like Gmail, YouTube, Google Drive, etc., will also be inaccessible. However, the Chrome device itself will not crash, as it can still function with other websites and applications.

#### NEW QUESTION # 94

A large pharmaceutical company signs up for a Chrome trial and wants to order Chrome licenses. An admin needs to verify the domain.

How can an admin verify the domain in the Admin console?

- A. Ask the network administrator to approve the DNS record
- **B. Add the TXT record to the DNS setting at their domain registrar**
- C. Contact Google support and give them the MX record
- D. Call the DNS provider and give them an NS record

**Answer: B**

Explanation:

To verify a domain in the Google Admin console, you must add a TXT record to the DNS settings at the domain registrar. This method confirms domain ownership by allowing Google to check for the specific TXT entry.

Verified Answer from Official Source:

The correct answer is verified from the Google Workspace Setup Guide, which outlines the domain verification process via DNS TXT records.

"To verify your domain, sign in to your domain registrar and add a TXT record to the DNS settings. This confirms ownership for Google services." Adding a TXT record is the standard method for proving domain ownership, which is essential when setting up Google services for a new domain.

Objectives:

- \* Verify domain ownership for Google services.
- \* Configure DNS settings appropriately.
