In order to remain competitive in the market, our company has been keeping researching and developing of the new Associate-Data-Practitioner exam questions. We are focused on offering the most comprehensive Associate-Data-Practitioner study materials which cover all official tests. Now, we have launched some popular Associate-Data-Practitioner training prep to meet your demands. And you will find the quality of the Associate-Data-Practitioner learning quiz is the first-class and it is very convenient to download it.

Our Associate-Data-Practitioner exam questions can assure you that you will pass the Associate-Data-Practitioner exam as well as getting the related certification under the guidance of our Associate-Data-Practitioner study materials as easy as pie. Firstly, the pass rate among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field. Secondly, you can get our Associate-Data-Practitioner Practice Test only in 5 to 10 minutes after payment, which enables you to devote yourself to study as soon as possible.

Associate-Data-Practitioner training materials: Google Cloud Associate Data Practitioner & Associate-Data-Practitioner guide torrent & Google Associate-Data-Practitioner quiz

Might it be said that you are enthused about drifting through the Google Associate-Data-Practitioner certification on the chief

endeavor? Then, you are at the ideal locale for Google Associate-Data-Practitioner exam Readiness. Google Associate-Data-Practitioner Dumps gives you the most recent review material that has been figured out for you to pass the Associate-Data-Practitioner exam on the key endeavor.

Google Cloud Associate Data Practitioner Sample Questions (Q78-Q83):

NEW QUESTION # 78

You recently inherited a task for managing Dataflow streaming pipelines in your organization and noticed that proper access had not been provisioned to you. You need to request a Google-provided IAM role so you can restart the pipelines. You need to follow the principle of least privilege. What should you do?

- A. Request the Dataflow Viewer role.
- **B. Request the Dataflow Developer role.**
- C. Request the Dataflow Worker role.
- D. Request the Dataflow Admin role.

Answer: B

Explanation:

The Dataflow Developer role provides the necessary permissions to manage Dataflow streaming pipelines, including the ability to restart pipelines. This role adheres to the principle of least privilege, as it grants only the permissions required to manage and operate Dataflow jobs without unnecessary administrative access. Other roles, such as Dataflow Admin, would grant broader permissions, which are not needed in this scenario.

NEW QUESTION # 79

Your organization is building a new application on Google Cloud. Several data files will need to be stored in Cloud Storage. Your organization has approved only two specific cloud regions where these data files can reside. You need to determine a Cloud Storage bucket strategy that includes automated high availability. What should you do?

- A. Create a single-region bucket in each of the two regions, and use Storage Transfer Service to replicate the data across the buckets in both regions.
- B. Create a multi-region bucket, and upload the files to this bucket.
- C. Create a single-region bucket in each of the two regions, and use the `gcloud storage` command to replicate the data across the buckets in both regions.
- **D. Create a dual-region bucket, and upload the files to this bucket.**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The strategy requires storage in two specific regions with automated high availability (HA). Cloud Storage location options dictate the solution:

* Option A: A dual-region bucket (e.g., `us-west1` and `us-east1`) replicates data synchronously across two user-specified regions, ensuring HA without manual intervention. It's fully automated and meets the requirement.

* Option B: Two single-region buckets with `gcloud storage` replication is manual, not automated, and lacks real-time HA (requires scripting and monitoring).

* Option C: Multi-region buckets (e.g., `us`) span multiple regions within a geography but don't let you specify exactly two regions, potentially violating the restriction.

NEW QUESTION # 80

Your organization needs to store historical customer order data

a. The data will only be accessed once a month for analysis and must be readily available within a few seconds when it is accessed. You need to choose a storage class that minimizes storage costs while ensuring that the data can be retrieved quickly. What should you do?

- A. Store the data in Cloud Storage using Standard storage.
- **B. Store the data in Cloud Storage using Nearline storage.**
- C. Store the data in Cloud Storage using Coldline storage.

- D. Store the data in Cloud Storage using Archive storage.

Answer: B

Explanation:

Using Nearline storage in Cloud Storage is the best option for data that is accessed infrequently (such as once a month) but must be readily available within seconds when needed. Nearline offers a balance between low storage costs and quick retrieval times, making it ideal for scenarios like monthly analysis of historical data. It is specifically designed for infrequent access patterns while avoiding the higher retrieval costs and longer access times of Coldline or Archive storage.

NEW QUESTION # 81

You have created a LookML model and dashboard that shows daily sales metrics for five regional managers to use. You want to ensure that the regional managers can only see sales metrics specific to their region. You need an easy-to-implement solution. What should you do?

- A. Create separate Looker dashboards for each regional manager. Set the default dashboard filter to the corresponding region for each manager.
- B. Create separate Looker instances for each regional manager. Copy the LookML model and dashboard to each instance. Provision viewer access to the corresponding manager.
- C. Create five different Explores with the `sql_always_filter` Explore filter applied on the `region_name` dimension. Set each `region_name` value to the corresponding region for each manager.
- D. Create a `sales_region` user attribute, and assign each manager's region as the value of their user attribute. Add an `access_filter` Explore filter on the `region_name` dimension by using the `sales_region` user attribute.

Answer: D

Explanation:

Using a `sales_region` user attribute is the best solution because it allows you to dynamically filter data based on each manager's assigned region. By adding an `access_filter` Explore filter on the `region_name` dimension that references the `sales_region` user attribute, each manager sees only the sales metrics specific to their region. This approach is easy to implement, scalable, and avoids duplicating dashboards or Explores, making it both efficient and maintainable.

NEW QUESTION # 82

You manage a BigQuery table that is used for critical end-of-month reports. The table is updated weekly with new sales data. You want to prevent data loss and reporting issues if the table is accidentally deleted. What should you do?

- A. Create a clone of the table. On deletion, re-create the deleted table by copying the content of the clone.
- B. Create a view of the table. On deletion, re-create the deleted table from the view and time travel data.
- C. Configure the time travel duration on the table to be exactly seven days. On deletion, re-create the deleted table solely from the time travel data.
- D. Schedule the creation of a new snapshot of the table once a week. On deletion, re-create the deleted table using the snapshot and time travel data.

Answer: D

Explanation:

Scheduling the creation of a snapshot of the table weekly ensures that you have a point-in-time backup of the table. In case of accidental deletion, you can re-create the table from the snapshot. Additionally, BigQuery's time travel feature allows you to recover data from up to seven days prior to deletion. Combining snapshots with time travel provides a robust solution for preventing data loss and ensuring reporting continuity for critical tables. This approach minimizes risks while offering flexibility for recovery.

NEW QUESTION # 83

.....

Our Associate-Data-Practitioner training materials are designed to help users consolidate what they have learned, will add to the instant of many training, the user can test their learning effect in time after finished the part of the learning content, have a special set of wrong topics in our Associate-Data-Practitioner guide torrent, enable users to find their weak spot of knowledge in this function, iterate through constant practice, finally reach a high success rate. As a result, our Associate-Data-Practitioner study questions are

designed to form a complete set of the contents of practice can let users master knowledge to pass the Associate-Data-Practitioner exam.
