Answer:

Explanation:

NEW QUESTION # 37

(What are some potential benefits of using SAP Business AI in finance? Note: There are 3 correct answers to this question.)

- A. Enforce compliance
- B. Reduce sales outstanding
- C. Simplify error resolution
- D. Generate creative accounting solutions
- E. Guard against fraud

Answer: A,C,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: SAP Business AI in finance provides benefits such as enforcing compliance through risk management and governance, guarding against fraud via anomaly detection, and simplifying error resolution with intelligent guidance in processes like invoice matching and payment clarification. These capabilities enhance accuracy, reduce risks, and improve operational efficiency in financial operations.

Exact extracts supporting this:

Enforce compliance: "With SAP AI-powered governance, compliance, and risk management solutions, finance departments can identify and respond to risks as they arise."learning.sap.com "Optimize working capital, manage risk, ensure compliance, and grow revenue."sap.com

Guard against fraud: "AI-assisted anomaly detection to protect the business against fraud."learning.sap.com

"Reduce revenue losses due to fraud using AI with SAP Business Integrity Screening for SAP S/4HANA Cloud Private

Edition."sap.com Simplify error resolution: "Intelligent guidance to simplify error resolution."learning.sap.com "Eliminate manual

payment clarifications, reducing accounts receivable matching effort by 71% with AI-powered matching and payment advice

extraction."sap.com Other options are incorrect because:

Option A: SAP Business AI focuses on reliable, data-grounded solutions rather than "creative" accounting, which could imply non-compliant or unethical practices.

Option D: While AI optimizes working capital, reducing days sales outstanding (DSO) is more directly associated with cash application automation, but the primary benefits highlighted are compliance, fraud protection, and error simplification; DSO reduction is a secondary outcome.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Sourced from the SAP Learning Journey "Discovering New AI Capabilities for SAP Finance" and the SAP product page for "SAP Business AI - Artificial Intelligence for ERP & Finance." These emphasize AI's role in compliance, fraud detection, and error resolution within financial processes, as aligned with C_BCBAI_2502 certification materials.

NEW QUESTION # 38

(What are some essential value propositions of SAP Business AI? Note: There are 3 correct answers to this question.)

- A. Replacement of human workers with AI agents to reduce cost and human error.
- B. Training of large multi-modal foundation models based on customer-specific business data.
- C. Use of extensive business data extracted from areas including Finance, Supply Chain, Procurement, and Human Resources.
- D. Use of the best technology on the market and strategic partnerships with industry leaders.
- E. Deployment of Joule, an advanced AI copilot, to help interpret business data and provide intelligent responses to business inquiries

Answer: C,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: The essential value propositions of SAP Business AI emphasize its relevance through grounding in extensive business data across key areas like Finance, Supply Chain, Procurement, and Human Resources, reliability via utilization of leading technology and strategic collaborations with industry leaders, and transformative capabilities with tools like Joule, the advanced AI copilot that interprets business data and delivers intelligent responses to inquiries. These propositions position SAP Business AI as a solution that drives efficiency, innovation, and productivity without aiming to replace human workers but rather to augment them, while avoiding training foundation models directly on customer-specific data to uphold privacy and ethics.

Exact extracts supporting this:

Use of extensive business data: "AI is grounded in business data and embedded into every business function, driving impact...

Industry-specific benefits: Drives value across functions like supply chain (agile, resilient, customer-centric), procurement (optimize spend, reduce risk), finance (manage risk, ensure compliance), HR (employee engagement, faster hiring)...".sap.com "With SAP Business AI, we are building the system of intelligence with three core principles: relevant, reliable, and responsible. Relevant SAP's AI..."news.sap.com "SAP Business AI provides reliable, accurate, and secure generative AI that is grounded in customers' business data..."learning.sap.com Deployment of Joule: "AI-powered scenarios: Access to over 230 AI-powered scenarios, expanding to 400 by the end of 2025, with Joule enabling navigational and transactional tasks up to 90% faster."sap.com "Process procurement data searches 95% faster with Joule... Speed up HR tasks 90% faster with Joule in SAP SuccessFactors... Complete sales tasks 80% faster with Joule in SAP Sales Cloud."sap.com Use of best technology and partnerships: "SAP Business AI provides reliable, accurate, and secure... we established an AI foundation..."learning.sap.com "Reliable: built on best technology and partnerships..."news.sap.com Other options are incorrect because:

Option B: SAP does not train large multi-modal foundation models on customer-specific data; instead, it grounds AI in business data using techniques like retrieval-augmented generation (RAG) to ensure privacy, as "Customer data is not shared with third-party large language model (LLM) providers for training their models." (from related ethics, but aligned with value props focusing on secure grounding rather than training).

Option E: SAP's propositions focus on augmentation and collaboration, not replacement, as "Solve complex challenges with AI agents that securely collaborate across your entire business... Helps teams get more done faster and more efficiently with AI that understands business processes and data."sap.com Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from the official SAP Business AI product page and SAP Learning course "Discovering SAP Business AI," specifically units on articulating the value of SAP Business AI, which highlight relevance (data grounding), reliability (tech and partnerships), and tools like Joule as core propositions for integrating AI into the SAP Business Suite. Additional support from SAP News blogs on unlocking potential with SAP Business AI, aligned with C_BCBAI_2502 certification materials.

NEW QUESTION # 39

Which SAP AI solution enables companies to analyze and predict employee attrition rates? Please choose the correct answer.

- A. SAP Conversational AI
- B. SAP Predictive Maintenance

- C. SAP SuccessFactors AI
- D. SAP Intelligent RPA

Answer: C

Explanation:

SAP SuccessFactors AI is the primary solution for analyzing and predicting employee attrition rates, leveraging AI to enhance HR processes. The correct answer is SAP SuccessFactors AI, as it is specifically designed to provide predictive workforce analytics and talent management insights.

SAP documentation highlights: "AI in human resources involves using artificial intelligence to streamline and enhance HR processes such as recruitment, employee engagement, and performance management. It automates repetitive tasks, analyzes large volumes of data for better decision-making, and offers personalized experiences for employees." Within SAP SuccessFactors AI, predictive analytics are used to "predict employee attrition rates" by analyzing factors like engagement, performance, and career progression. The solution's "talent intelligence hub" enables organizations to identify at-risk employees and implement retention strategies. FC Bayern's use of SAP SuccessFactors AI illustrates how it elevates HR processes by predicting talent needs and improving employee retention.

The incorrect options are not relevant to employee attrition prediction. SAP Intelligent RPA focuses on automating repetitive tasks, not HR analytics. SAP Conversational AI handles natural language interactions, such as chatbots, not attrition analysis. SAP Predictive Maintenance is designed for equipment maintenance in manufacturing, not HR. SAP SuccessFactors AI is the clear choice based on its documented HR-specific AI capabilities.

NEW QUESTION # 40

If a company implements SAP's Business AI offerings comprehensively, all things being equal, which bottomline benefits could they expect?

There are 2 correct answers to this question.

Response:

- A. Gross profit increase: up to 1.4%
- B. Revenue increase: up to 1.4%
- C. Gross profit increase: up to 3.5%
- D. Revenue increase: up to 3.5%

Answer: A,D
