## 最新的 SolarWinds Certified Professional Hybrid-Cloud-Observability-Network-Monitoring 免費考試真題 (Q119-Q124):

問題 #119

Which three of the following flow protocols does hybrid cloud observability support? (Choose three.)

- A. NetFlowv6
- B. sFlow
- C. NetFlowv9
- D. J-Flow

答案: B,C,D

問題 #120

What is the correct sequence of steps to create a device studio poller?

- A. Select the technology, specify the data source, assign the poller to node, and save the poller.
- B. Select the technology, assign the poller to node, specify the data source, and save the poller.

- C. Assign the poller to node, select the technology, specify the data source, and save the poller.
- D. Select the technology, specify the data source, save the poller, and assign the poller to node.

答案：D

#### 問題 #121

If the data collected for hardware health is incorrect, which step could rectify the issue?

- A. Change the poller assigned to sensor.
- B. Create a custom poller in device studio for fan speed, power supply, and temperature.
- C. Download the MIB file from the SolarWinds website and add it to the device's firmware.
- D. Change the MIB tree used for polling.

答案：D

#### 問題 #122

Which two of the following actions can be taken to resolve unknown flow traffic events? (Choose two.)

- A. Add the devices and interfaces to SolarWinds' database.
- B. Ensure flow-enabled devices send data to appropriate port.
- C. Enable automatic addition of flow sources.
- D. Configure devices to send all flow data.

答案：A,B

#### 問題 #123

When creating a new rule action, what is the best option to enable if too many events trigger the rule within a short time?

- A. flood protection
- B. time window
- C. entry count
- D. excessive event

答案：A

解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

In SolarWinds Log Analyzer and other log-based alerting systems, "flood protection" is a key feature to prevent alert storms when numerous events trigger a rule in a very short period. From the SolarWinds documentation:

"Flood protection ensures that if an excessive number of log entries match a rule in a short period, only a manageable number of actions are triggered, and the remainder are suppressed or summarized. This prevents overwhelming the system and users with repeated alerts." This is best practice for maintaining alert quality and system performance.
