There are also the introduction of the details and the guarantee of our ACA-100 prep torrent for you to read. You can also know how to contact us and what other client's evaluations about our ACA-100 test braindumps. The pages of our product also provide other information about our product and the exam.

Appian Certified Analyst Sample Questions (Q45-Q50):

NEW QUESTION # 45

You are part of an Agile team, and your responsibilities and attributes include:

A keen understanding of the business, the customer, and the market

The ability to clearly express product backlog items

The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.

What is your role name?

- A. Scrum Master
- B. Appian Analyst
- C. Sponsor
- **D. Product Owner**

Answer: D

Explanation:

The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.

Role of Product Owner:

Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.

Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.

Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.

Why Not Other Options?:

A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.

B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.

D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

Appian Community Success Guide: Roles in Agile Teams

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.

NEW QUESTION # 46

You are part of a project team building an application for organizing and automating an approval process for purchase orders.

Each purchase order requires approvals from multiple users within the application, and these approvals are sequential (for example, User B receives an approval task after the completion of User A's approval task). Your team is responsible for showing the approval step of each purchase order on its purchase order record.

Which Appian interface component should you use to best display the completed, current, and future approval steps for each purchase order?

- A. Gauge Component
- B. Org Chart Component
- C. Progress Bar Component
- **D. Milestone Component**

Answer: D

Explanation:

The Milestone Component in Appian is the best choice for displaying the completed, current, and future approval steps of each purchase order. This component visually represents the progression of a process with distinct milestones, making it ideal for sequential tasks like approvals. Each milestone can indicate whether the step is completed, active, or pending, providing a clear and intuitive view of the approval process for users. Appian Documentation - Milestone Component Note: The Progress Bar Component

(A) is more suited for linear progress representation rather than distinct stages. The Gauge Component (B) and Org Chart Component (D) are not appropriate for this type of sequential task display.

NEW QUESTION # 47

In Appian, what is the purpose of a process model?

- A. To create a database schema
- B. To define the look and feel of the user interface
- C. To manage user permissions within the application
- D. To automate business workflows by defining sequences of tasks

Answer: D

NEW QUESTION # 48

Which Appian object's primary purpose is to define the structure of related data for use in a process model?

- A. Custom Data Type (CDT)
- B. Constant
- C. Expression Rule
- D. Record

Answer: A

Explanation:

A Custom Data Type (CDT) in Appian is primarily used to define the structure of related data. It represents a structured data type composed of multiple fields, and it is often used in process models to define the shape of data that will be passed between different activities or stored in the database.

Custom Data Type (CDT) Overview:

CDTs allow developers to define a complex data structure that can include various data types, such as text, numbers, dates, and even nested CDTs.

They are essential for passing structured data within a process model and between Appian applications and external systems.

Why Not Other Options?:

B . Record: Used to represent a view of data from an external or internal source, focusing on displaying and interacting with that data rather than defining its structure.

C . Constant: Stores a fixed value that can be used throughout the application, but it does not define complex data structures.

D . Expression Rule: Encapsulates logic and calculations but does not define data structures.

References:

Appian Documentation on Custom Data Types: Custom Data Types (CDT)

Using CDTs ensures that the data used within process models is structured and consistent, enabling robust data handling across the application.

NEW QUESTION # 49

Which of the following is a key responsibility of a Product Owner in an Agile project?

- A. Writing code for the application
- B. Designing the user interface
- C. Prioritizing the product backlog
- D. Facilitating daily stand-up meetings

Answer: C

NEW QUESTION # 50
