## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q174-Q179):

### NEW QUESTION # 174

In the context of global frameworks, what does the acronym SDO stand for?

- A. Software Development Organization
- **B. Standards Development Organization**
- C. Security Development Organization
- D. Systematic Development Organization

**Answer: B**

Explanation:

In the context of international standards and frameworks, SDO stands for "Standards Development Organization." SDOs are organizations like ISA, IEC, ISO, and NIST, which are responsible for developing, maintaining, and publishing standards used globally for industrial cybersecurity and other domains.

Reference: ISA/IEC 62443-1-1:2007, Section 3.1 (Abbreviations and terms); official definitions in standards literature.

#### NEW QUESTION # 175

Which of the following tools has the potential for serious disruption of a control network and should not be used on a live system?

Available Choices (select all choices that are correct)

- A. Remote desktop
- B. FTP
- C. Web browser
- D. Vulnerability scanner

**Answer: D**

Explanation:

A vulnerability scanner is a tool that scans a network or a system for known vulnerabilities, such as misconfigurations, outdated software, or weak passwords. A vulnerability scanner can provide valuable information for improving the security posture of a system, but it can also cause serious disruption of a control network if used on a live system. This is because a vulnerability scanner may generate a large amount of network traffic, consume system resources, trigger alarms, or even crash devices by exploiting vulnerabilities.

Therefore, a vulnerability scanner should not be used on a live system without proper authorization and precautions. A vulnerability scanner should only be used on a test or isolated network, or during a scheduled maintenance window with minimal impact on the system operation. #### NEW QUESTION # 176

Which of the following is the underlying protocol for Ethernet/IP?

Available Choices (select all choices that are correct)

- A. Highway Addressable Remote Transducer (HART)
- B. Object Linking and Embedding (OLE) for Process Control
- C. Common Industrial Protocol
- D. Building Automation and Control Network (BACnet)

**Answer: C**

#### NEW QUESTION # 177

Which of the following is NOT a strategy for deploying a WAN?

- A. Internet
- B. Carrier-managed WANs
- C. Enterprise WANs
- D. Local area networks

**Answer: D**

Explanation:

A Local Area Network (LAN) is not a strategy for deploying a Wide Area Network (WAN). WAN deployment strategies include using the public Internet, private enterprise WANs, or carrier-managed WANs.

LANs, by definition, serve local, not wide-area, connectivity. ISA/IEC 62443 standards refer to different strategies for extending network communications over broader geographic regions, but do not classify LAN as a WAN deployment option.

Reference: ISA/IEC 62443-3-3:2013, Section 4.2.3.4 ("Communications network technologies"); Glossary definitions for LAN and WAN.

### NEW QUESTION # 178

Which of the following is an activity that should trigger a review of the CSMS?

Available Choices (select all choices that are correct)

- A. Organizational restructuring
- B. Security incident exposing previously unknown risk.
- C. Budgeting
- D. New technical controls

**Answer: A,B,D**

Explanation:

According to the ISA/IEC 62443-2-1 standard, a review of the CSMS should be triggered by any changes that affect the cybersecurity risk of the industrial automation and control system (IACS), such as new technical controls, organizational restructuring, or security incidents<sup>1</sup>. Budgeting is not a trigger for CSMS review, unless it impacts the cybersecurity risk level or the CSMS itself<sup>2</sup>.
