

New CCFA-200b Exam Sample & Valid CCFA-200b Exam Tutorial

BTW, DOWNLOAD part of Actual4Exams CCFA-200b dumps from Cloud Storage: <https://drive.google.com/open?id=1KdaMyQR5LADm3G3wiXVA4oweYAOO1yOn>

Our company also arranges dedicated personnel to ensure the correctness of our CCFA-200b learning quiz. As you know, our CCFA-200b study materials are certified products and you can really use them with confidence. On one hand, our company always hire the most professional experts who will be in charge of compiling the content and design the displays. On the other hand, we will ask for some volunteers to study with our CCFA-200b learning prep to test the pass rate.

CrowdStrike CCFA-200b Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Rules Configuration: This domain involves creating custom IOA rules, configuring exclusions to resolve false positives, managing IOC settings for threat detection, and configuring CID-wide General Settings.
Topic 2	<ul style="list-style-type: none">User Management: This domain covers determining appropriate roles for console access, creating and assigning roles with specific permissions, and managing API keys for platform access.
Topic 3	<ul style="list-style-type: none">Group Creation: This domain covers assigning endpoints to appropriate groups for policy application and following best practices for managing host group structures.
Topic 4	<ul style="list-style-type: none">Host Management and Setup: This domain addresses filtering and organizing hosts, disabling detections and understanding their effects, managing Reduced Functionality Mode situations, locating inactive sensors and their retention, and utilizing relevant management reports.
Topic 5	<ul style="list-style-type: none">Dashboards and Reports: This domain covers understanding different sensor report types and their use cases, and interpreting various audit logs for tracking platform activities.

Topic 6	<ul style="list-style-type: none"> Policy Application: This domain encompasses configuring prevention policies for security posture, sensor update policies, RTR audit policies, containment policies with IP exclusions, and managing quarantined files.
Topic 7	<ul style="list-style-type: none"> Workflows: This domain focuses on configuring automated workflows that execute predefined actions when specific triggers or conditions are met.

Valid CCFA-200b Exam Tutorial & New CCFA-200b Exam Experience

Budget-friendly CCFA-200b study guides have been created by Actual4Exams because the registration price for the CrowdStrike CCFA-200b exam is already high. You won't ever need to look up information in various books because our CrowdStrike CCFA-200b Real Questions are created with that in mind. We provide 365 days free upgrades.

CrowdStrike Falcon Administrator Sample Questions (Q103-Q108):

NEW QUESTION # 103

Which of the following is NOT a way to determine the sensor version installed on a specific endpoint?

- A. Use the Investigate > Host Search to filter to the specific endpoint
- B. Use the Sensor Report to filter to the specific endpoint
- C. Use Host Management to select the desired endpoint. The agent version will be listed in the columns and details
- D. From a command line, run the sc query csagent -version command**

Answer: D

Explanation:

From a command line, running the sc query csagent -version command is not a way to determine the sensor version installed on a specific endpoint. This command will only show the status of the csagent service, not the sensor version. The other options are valid ways to determine the sensor version installed on a specific endpoint using Falcon UI or API. You can use the Sensor Report, the Host Search, or the Host Management features to filter, search, or select the desired endpoint and view the sensor version information.

NEW QUESTION # 104

Which command would tell you if a Falcon Sensor was running on a Windows host?

- A. netstat.exe -f
- B. cswindiaq.exe -status
- C. sc.exe query falcon
- D. sc.exe query csagent**

Answer: D

Explanation:

The command that would tell you if a Falcon Sensor was running on a Windows host is sc.exe query csagent. This command will show the status of the csagent service, which is responsible for running the sensor on Windows systems. The output of this command will indicate if the service is running, stopped, or paused. If the service is running, the sensor is also running.

NEW QUESTION # 105

During a simulated training exercise with your security team, an analyst used Falcon to network contain a host. It was then discovered that containing this specific host interrupted some key business processes and resulted in lost revenue.

As the Falcon Administrator, what can be done to prevent this interruption in the future?

- A. Add this Falcon host to your deny list so that it is never able to be network contained again

- B. Configure your containment policy to allow the IP addresses for those key business processes so that your hosts will be allowed to communicate with them, even if those hosts are contained
- C. Educate the analyst so they can understand and memorize which hosts are safe to network contain, and which would cause harm if contained
- D. Collaborate with the firewall engineers so that in the future, network containment would only deny external IP addresses and no internal IP addresses

Answer: B

NEW QUESTION # 106

What is the purpose of the Default Sensor Policy?

- A. Acts as a "catch all" policy if no other Sensor Policies are applied.
- B. A mechanism to deploy the oldest supported version of the Falcon Sensor.
- C. Tests the sensor configuration settings before deployment.
- D. Used to reset all sensor settings to Default.

Answer: A

Explanation:

The purpose of the Default Sensor Policy is that it acts as a "catch all" policy if no other Sensor Policies are applied. A Sensor Policy is a policy that defines the detection and prevention settings for the Falcon sensor on a host. You can create and assign custom Sensor Policies to different hosts or groups in your environment. However, if a host is not assigned to a specific Sensor Policy, it will inherit the settings from the Default Sensor Policy. The Default Sensor Policy is a "catch-all" policy that is enabled by default and has the "Malware Protection" feature turned on. You can modify the settings of the Default Sensor Policy, but you cannot delete or disable it.

NEW QUESTION # 107

Certain services are required to be running to install the Windows Falcon sensor. What may cause the LMHost service to be disabled?

- A. TCP/IP NetBIOS Helper
- B. Windows Base Filtering Engine
- C. WinHTTP AutoProxy
- D. DHCP Client

Answer: A

NEW QUESTION # 108
