

Exam 3V0-21.25 Prep | 3V0-21.25 Test Sample Online

P.S. Free 2026 VMware 3V0-21.25 dumps are available on Google Drive shared by Real4Prep: https://drive.google.com/open?id=1wdhkY3MBa6a_pWU06qgnQ1jpVfzaEMv1

What do you think of VMware 3V0-21.25 Certification Exam? As one of the most popular VMware certification exams, 3V0-21.25 test is also very important. When you are looking for reference materials in order to better prepare for the exam, you will find it is very hard to get the excellent exam dumps. What should we do? It doesn't matter. Real4Prep is well aware of your aspirations and provide you with the best certification training dumps to satisfy your demands.

Real4Prep addresses this issue by offering real VMware 3V0-21.25 Questions. Real4Prep's team of professionals worked tirelessly to create the 3V0-21.25 questions, ensuring that applicants have access to the most recent and genuine 3V0-21.25 Exam Questions. With Real4Prep's help, you can pass the 3V0-21.25 exam on your first attempt or claim a refund according to certain terms and conditions.

Professional Exam 3V0-21.25 Prep for Real Exam

You can download Real4Prep VMware 3V0-21.25 PDF dumps file on your desktop computer, laptop, tab, or even on your smartphone. Just download the 3V0-21.25 PDF questions file after paying affordable Prepare for your Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) exam questions charges and start Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) exam preparation anytime and anywhere.

VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which VCF component is responsible for the automated lifecycle management (patching and upgrading) of the VCF Automation and VCF Operations appliances?

- A. VMware Aria Suite Lifecycle
- B. SDDC Manager
- C. VCF Operations Orchestrator
- D. vSphere Lifecycle Manager (vLCM)

Answer: B

Explanation:

In VCF 9.0, SDDC Manager is the centralized "source of truth" and lifecycle engine for the entire software- defined data center.

While older versions of the stack relied on multiple standalone lifecycle managers, VCF 9.0 continues to consolidate these functions. SDDC Manager handles the end-to-end patching and upgrading of the management components, including the VCF Automation and VCF Operations appliances. It ensures that all components remain within a "Validated Solution" versioning matrix, preventing compatibility issues that could arise from manual upgrades. SDDC Manager orchestrates the download of bundles, performs pre-checks, and manages the non-disruptive rolling upgrades of these services, allowing the administrator to maintain a secure and up-to-date private cloud with minimal manual intervention.

NEW QUESTION # 19

An organization uses a centralized external Configuration Management Database (CMDB) to track all infrastructure assets. Currently, when a new virtual machine (VM) is provisioned through VMware Cloud Foundation (VCF) Automation, operations teams are required to manually input associated metadata into the CMDB.

An administrator is tasked with reducing the manual effort and increasing efficiency of this process using VCF Automation. Which three of the following can VCF Automation perform? (Choose three.)

- A. Request additional metadata as input during the deployment of the blueprint.
- B. Create a new event topic that creates a notification upon successful VM provisioning.
- C. Configure a subscription that reacts to VM provisioning requests.
- D. Call a webhook endpoint on the CMDB API with payload containing the required metadata.
- E. Create a webhook endpoint on VCF with payload containing the required metadata.

Answer: A,C,D

Explanation:

To automate CMDB updates in VCF 9.0, administrators leverage the Event Broker Service (EBS) and Custom Forms. First, the administrator can Request additional metadata as input during the blueprint request. This ensures that unique information, such as "Cost Center" or "Application ID," is captured directly from the user at request time. Second, the admin must Configure a subscription that specifically listens for the "Post-Provisioning" event topic. This subscription acts as the trigger for the automation logic. Finally, the subscription invokes an ABX action or Orchestrator workflow that is programmed to Call a webhook endpoint on the CMDB API. This call sends a JSON payload containing both the system-generated metadata (e.g., VM UUID, IP address) and the user-provided inputs directly to the CMDB. This "closed-loop" automation eliminates manual data entry, reduces human error, and ensures that the asset repository is updated in real-time as soon as the infrastructure is live.

NEW QUESTION # 20

Click on the area to find syntax assistance to include a cloudConfig stanza to the blueprint.

Answer:

Explanation:

Explanation:

Click on the "Machine" resource under the "Cloud Agnostic" category in the left-side resource palette.

In the VCF 9.0 Automation Design Canvas, the platform provides built-in schema documentation and syntax assistance to help administrators build valid YAML blueprints. To find specific guidance for the cloudConfig stanza-which is used to pass cloud-init or post-provisioning scripts to a guest OS-the administrator should use the resource palette on the left side of the screen.

By clicking on the "Machine" resource (typically found under the Cloud Agnostic category), the interface displays a context-sensitive help pane or schema view. This pane lists all available properties for the Cloud.Machine resource type, including detailed descriptions and examples for cloudConfig.

This documentation is essential because cloudConfig requires specific YAML indentation and key- value pairings (such as users: or runcmd:) to be correctly interpreted by the cloud-init agent within the virtual machine. This integrated "just-in-time" assistance ensures that administrators can quickly reference the correct syntax without leaving the design environment, reducing errors in complex multi- cloud template development.

NEW QUESTION # 21

An administrator has been tasked with deploying an AllApps Organization within VMware Cloud Foundation (VCF) Automation. During the regional networking creation step, which three NSX constructs will automatically be configured? (Choose three.)

- A. A Virtual Private Cloud (VPC) connectivity profile.
- B. A Default Virtual Private Cloud (VPC).
- C. A Virtual Distributed Switch (VDS).
- D. A Provider Tier-0 Gateway.
- E. An NSX Transit Gateway.

Answer: A,B,E

Explanation:

When creating a Region for an AllApps Organization in VCF 9.0, the automation engine orchestrates several critical NSX networking components to enable multi-tenancy. The NSX Transit Gateway is deployed to provide the underlying routing backbone that connects different VPCs and external services within the region. Simultaneously, a Default VPC is instantiated for the organization, providing an out-of-the- box isolated environment where developers can immediately begin deploying workloads. To govern how this VPC and others interact with the broader network, a VPC Connectivity Profile is created. This profile defines the "Guardrails" for the organization, such as whether VPCs are strictly isolated (Private - TGW) or have external access. Unlike manual networking setups, these steps are automated during the Region-to- Organization mapping process, ensuring that the necessary multi-tenant infrastructure is consistent and ready for use without manual Tier-1 gateway or segment configuration by the administrator.

NEW QUESTION # 22

Match the VMware Cloud Foundation (VCF) Operations orchestrator component with its description by dragging and dropping the correct item from the Component list on the left and place them onto the Description list on the right.

Component	Description
Workflow	Defines the modules and libraries to be used as dependencies within scripts.
Action	A list of variables, that can be used to configure constants across an entire VCF Operations orchestrator server deployment.
Scriptable task	Represents an individual function that can be used as a building block within workflows.
Workflow Token	A series of decisions and steps that are automated to run sequentially.
Resource Elements	Contains the details of a specific run of a workflow, including all parameters related to the workflow run.
Environments	A blank canvas for defining general purpose tasks using JavaScript, Node.js, Python or PowerShell.
Configuration Elements	External Objects imported into the VCF Operations orchestrator server for use within workflows.

Answer:

Explanation:

Component	Description
Environments	Defines the modules and libraries to be used as dependencies within scripts.
Configuration Elements	A list of variables, that can be used to configure constants across an entire VCF Operations orchestrator server deployment.
Action	Represents an individual function that can be used as a building block within workflows.
Workflow	A series of decisions and steps that are automated to run sequentially.
Workflow Token	Contains the details of a specific run of a workflow, including all parameters related to the workflow run.
Scriptable task	A blank canvas for defining general purpose tasks using JavaScript, Node.js, Python or PowerShell.
Resource Elements	External Objects imported into the VCF Operations orchestrator server for use within workflows.

Explanation:

Component	Description
Environments	Defines the modules and libraries to be used as dependencies within scripts.
Configuration Elements	A list of variables, that can be used to configure constants across an entire VCF Operations orchestrator server deployment.
Action	Represents an individual function that can be used as a building block within workflows.
Workflow	A series of decisions and steps that are automated to run sequentially.
Workflow Token	Contains the details of a specific run of a workflow, including all parameters related to the workflow run.
Scriptable task	A blank canvas for defining general purpose tasks using JavaScript, Node.js, Python or PowerShell.
Resource Elements	External Objects imported into the VCF Operations orchestrator server for use within workflows.

In VMware Cloud Foundation 9.0, the VCF Operations orchestrator (formerly vRealize Orchestrator) utilizes a specific object-oriented hierarchy to facilitate infrastructure automation. Workflows are the primary administrative unit, representing a logical sequence of automated steps. Within these, Actions serve as reusable, modular functions—often written in JavaScript—that act as building blocks across multiple workflows to reduce code duplication. For custom logic, Scriptable tasks provide a "blank canvas" allowing developers to execute polyglot scripts (Node.js, Python, or PowerShell) directly within a workflow's schema. To manage environment-wide variables and reusable assets, the orchestrator uses Configuration Elements and Resource Elements. Configuration Elements store persistent constants (like API endpoints or global timeout values) shared across the server, while Resource Elements allow the import of external files (such as XML, text, or binary files) for use during execution. Modern scripting requirements are handled by Environments, which define the specific runtime dependencies and external libraries (like boto3 for Python) needed for complex integrations. Finally, the Workflow Token is a critical operational object created during every execution; it stores the specific state, inputs, and outputs of a single run, serving as the primary source for audit trails and troubleshooting failed automation tasks. Together, these components allow for the deep extensibility required to integrate VCF with third-party ITSM and CMDB platforms.

NEW QUESTION # 23

.....

If passing the 3V0-21.25 certification exam in a short time is a goal of yours, we're here to help you get there on your first attempt by providing you with 3V0-21.25 real exam dumps you need to succeed. We have three formats of 3V0-21.25 updated questions.

This is done so that every VMware 3V0-21.25 exam applicant may find useful 3V0-21.25 study material here, regardless of how they want to learn.

3V0-21.25 Test Sample Online: <https://www.real4prep.com/3V0-21.25-exam.html>

VMware Exam 3V0-21.25 Prep The more customers we buy, the bigger the discount will be, VMware Exam 3V0-21.25 Prep You can not only get a considerable salary but also get a good promotion, The VMware desktop practice test software and web-based Understanding Advanced VMware Cloud Foundation 9.0 Automation 3V0-21.25 practice test both simulate the actual exam environment and identify your mistakes, VMware Exam 3V0-21.25 Prep If you don't improve your soft power, you are really likely to be replaced.

A new primer on threats to privacy and how to guard it, Users had to track Reliable 3V0-21.25 Exam Sims where they were with respect to the tour so that they wouldn't feel trapped, The more customers we buy, the bigger the discount will be.

Effective Way to Prepare for the VMware 3V0-21.25 Certification Exam?

You can not only get a considerable salary 3V0-21.25 but also get a good promotion, The VMware desktop practice test software and web-based Understanding Advanced VMware Cloud Foundation 9.0 Automation 3V0-21.25 practice test both simulate the actual exam environment and identify your mistakes.

If you don't improve your soft power, you are really likely to be replaced, The only thing you must make sure is that you have left your right E-mail address when you purchase our 3V0-21.25 study guide.
