## 100% Pass-Rate Actual CAD Test Pdf Offers Candidates Excellent Actual ServiceNow Certified Application Developer-ServiceNow Exam Products

Candidates are looking for valid CAD questions which belong to CAD urgently. If you need valid exam questions and answers, our high quality is standing out. We are confident that our CAD training online materials and services are competitive. Every year we spend much money and labor relationship on remaining competitive. We are trying to offer the best high passing-rate CAD Training Online materials with low price. Our exam materials will help you pass exam one shot without any doubt.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q174-Q179):

### NEW QUESTION # 174

Which one of the following is true for a Script Include with a Protection Policy value of Protected?

- A. Any user with the protected\_edit role can see and edit the Script Include
- B. The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store
- C. The Protection policy option can only be enabled by a user with the admin role
- D. The Protection Policy is applied only if the glide.app.apply\_protection system property value is true

**Answer: B**

Explanation:

[https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c\\_ScriptProtectionPolicy.html](https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_ScriptProtectionPolicy.html)

### NEW QUESTION # 175

Which of the following statements is NOT true for the Form Designer?

- A. To add a field to the form layout, drag the field from the Fields tab to the desired destination on the form.
- B. To remove a field from the form layout, hover over the field to enable the Action buttons, and select the Delete (X) button.
- C. To create a new field on a form's table, drag the appropriate data type from the Field Types tab to the form and then configure the new field.
- **D. To add a section to the form layout, drag it from the Field Types tab to the desired destination on the form.**

**Answer: D**

Explanation:

[https://docs.servicenow.com/bundle/tokyo-platform-administration/page/administer/form-administration/concept/c\\_FormDesign.html](https://docs.servicenow.com/bundle/tokyo-platform-administration/page/administer/form-administration/concept/c_FormDesign.html)

### NEW QUESTION # 176

What is the Event Registry?

- A. A Workflow which is launched every time an Event is generated; used to debug Events
- **B. A table containing a record for every Event known to the ServiceNow system which allows ServiceNow to react when Events are generated**
- C. The Event Log which lists all Events that have been generated
- D. The method used in server-side scripts to generate Events and pass parameters

**Answer: B**

Explanation:

In ServiceNow, the Event Registry is a table that contains a record for every event recognized by the system. It allows ServiceNow to respond when these events are generated. By registering events, the system can automate activities such as triggering notifications or executing script actions when specific events occur. Therefore, the correct answer is A.

The other options are not accurate descriptions of the Event Registry:

B . The Event Log which lists all Events that have been generated: This describes the Event Log, not the Event Registry.

C . A Workflow which is launched every time an Event is generated; used to debug Events: This is not how the Event Registry functions.

D . The method used in server-side scripts to generate Events and pass parameters: This describes the `gs.eventQueue()` method, not the Event Registry.

For more detailed information, refer to the official ServiceNow documentation on the Event Registry.

### NEW QUESTION # 177

Which one of the following is the baseline behavior of a table in a privately-scoped application?

- A. Only artifacts in the table's application can read from the table
- **B. All application scopes can read from the table**
- C. Any Business Rule can read, write, delete, and update from the table
- D. The table and its data are not accessible using web services

**Answer: B**

Explanation:

[https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c\\_DefaultDesignAccessPermissions.html](https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_DefaultDesignAccessPermissions.html)

The baseline behavior of a table in a privately-scoped application is that all application scopes can read from the table. A privately-scoped application is an application that restricts write access to its tables and resources to scripts within the same scope. However, read access is allowed by default for all scopes, unless the administrator explicitly denies it using an Access Control rule. This allows for data sharing between different applications while maintaining data integrity and security. References: [Product Documentation | ServiceNow], [Advantages of Scoped Applications in ServiceNow]

### NEW QUESTION # 178

There is a basic strategy when creating a Utils Script Include. Identify the step that does not belong.

- A. Identify the table
- B. Create a class
- C. Script the function(s)
- D. Create a prototype object from the new class

**Answer: A**

### NEW QUESTION # 179
