P.S. Free 2026 Juniper JN0-351 dumps are available on Google Drive shared by DumpsActual: <https://drive.google.com/open?id=1EwQussZ9894qTU0jvxKdjFteSk3Nxsrk>

To assimilate those useful knowledge better, many customers eager to have some kinds of JN0-351 practice materials worth practicing. All content is clear and easily understood in our JN0-351 practice materials. They are accessible with reasonable prices and various versions for your option. All content are in compliance with regulations of the JN0-351 Exam. As long as you are determined to succeed, our JN0-351 study guide will be your best reliance.

Now passing Juniper certification JN0-351 exam is not easy, so choosing a good training tool is a guarantee of success. DumpsActual will be the first time to provide you with exam information and exam practice questions and answers to let you be fully prepared to ensure 100% to pass Juniper Certification JN0-351 Exam. DumpsActual can not only allow you for the first time to participate in the Juniper certification JN0-351 exam to pass it successfully, but also help you save a lot of valuable time.

100% Pass 2026 Latest Juniper Exam JN0-351 Price

If you have the certification the exam, you can enter a better company, and your salary will also be doubled. JN0-351 training materials can help you pass the exam and obtain corresponding certification successfully. JN0-351 exam materials are edited by experienced experts, and they possess the professional knowledge for the exam, and you can use it with ease. We have online and offline chat service, they possess the professional knowledge for the exam, and you can consult them any questions that bothers you. We offer you free update for one year for JN0-351 Exam Dumps, and our system will send the latest version to you automatically.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q130-Q135):

NEW QUESTION # 130

Referring to the exhibit, why is this OSPF adjacency remaining in this state?

user@host> show ospf neighbor					
Address	Interface	State	ID	Pri	Dead
172.26.1.1	ge-0/0/3.0	ExStart	192.168.1.1	128	31

- A. A hello interval mismatch exists between the OSPF neighbors.
- B. A subnet mask mismatch exists between the OSPF neighbors.
- **C. An MTU mismatch exists between the OSPF neighbors.**
- D. An area ID mismatch exists between the OSPF neighbors

Answer: C

Explanation:

OSPF stuck in ExStart is mainly related to mismatched MTU. It could also be caused by a firewall filter on the loopback interface, but this is not an alternative.

NEW QUESTION # 131

Which statement is correct about the exhibit?

```
[edit routing-options]
user@router# show
interface-routes {
    rib-group inet group-name;
}
rib-groups {
    group-name {
        import-rib [ inet.0 first.inet.0 second.inet.0 ];
    }
}
```

- **A. Only the interface routes from inet.0 will be imported into both first.inet.0 and second.inet.0.**
- B. Only the interface routes from first.inet.0 and second.inet.0 will be imported into inet.0.
- C. All the routes from first.inet.0 and second.inet.0 will be imported into inet.0.
- D. All routes from inet.0 will be imported into first.inet.0 and second.inet.0.

Answer: A

NEW QUESTION # 132

Exhibit

```

{master:0}
user@switch> show vlans brief
Routing instance      VLAN name      Tag      Interfaces
default-switch        default          1
                                         ge-0/0/0.0*
                                         ge-0/0/1.0*
                                         ge-0/0/2.0*
                                         ge-0/0/3.0*
                                         ge-0/0/4.0*
                                         ge-0/0/5.0*

```

What does the * indicate in the output shown in the exhibit?

- A. The interface is active.
- B. The switch ports have a router attached.
- C. All interfaces have elected a root bridge.
- D. The interface is down.

Answer: A

Explanation:

The exhibit shows the output of the command `show vlans brief`, which displays brief information about VLANs and their associated interfaces¹.

The output has four columns: Routing instance, VLAN name, Interfaces, and Tagging.

The * symbol indicates that the interface is active, meaning that it is up and forwarding traffic¹. This can be verified by the command `show interfaces`, which displays the status of the interfaces².

NEW QUESTION # 133

What are two characteristics of RSTP alternate ports? (Choose two.)

- A. RSTP alternate ports provide an alternate lower cost path to the root bridge.
- B. RSTP alternate ports block traffic while receiving superior BPDUs from a neighboring switch.
- C. RSTP alternate ports are active ports used to forward frames toward the root bridge.
- D. RSTP alternate ports provide an alternate higher cost path to the root bridge.

Answer: B,D

Explanation:

A is correct because RSTP alternate ports block traffic while receiving superior BPDUs from a neighboring switch. An alternate port is a backup port for a root port, which means it receives better BPDUs from another bridge than the current root port. However, an alternate port does not forward any traffic, as it is in a discarding state. It only listens to BPDUs and waits for the root port to fail. If the root port fails, the alternate port can immediately transition to a forwarding state and become the new root port.

C is correct because RSTP alternate ports provide an alternate higher cost path to the root bridge. An alternate port is selected based on the same criteria as the root port, which are the lowest bridge ID, the lowest path cost, the lowest sender port ID, and the lowest receiver port ID.

However, an alternate port receives a higher cost BPDUs than the root port, otherwise it would be the root port itself. Therefore, an

alternate port provides an alternate higher cost path to the root bridge than the root port.

NEW QUESTION # 134

Referring to the exhibit, which two configuration changes must you apply for packets to reach from R1 to R3 using IS-IS? (Choose two.)

- A. On R1, disable Level 2 on the ge-0/0/1 interface.
- B. On R3 disable Level 2 on the ge-0/0/4 interface.
- C. **On R1, enable Level 1 on the ge-0/0/1 interface.**
- D. **On R3 enable Level 1 on the ge-0/0/4 interface**

Answer: C,D

Explanation:

A) On R1, enable Level 1 on the ge-0/0/1 interface. In IS-IS, both levels (Level 1 and Level 2) are enabled by default when you enable IS-IS on an interface1. Level 1 systems route within an area.

If the destination is outside an area, Level 1 systems route toward a Level 2 system. Therefore, enabling Level 1 on the ge-0/0/1 interface on R1 would allow packets to reach from R1 to R3.

D) On R3 enable Level 1 on the ge-0/0/4 interface. Similarly, enabling Level 1 on the ge-0/0/4 interface on R3 would allow packets to reach from R1 to R3. These explanations are based on the IS-IS configuration documents and learning resources available at Juniper Networks1 and Cisco.

NEW QUESTION # 135

.....

Our passing rate of JN0-351 learning quiz is 99% and our JN0-351 practice guide boosts high hit rate. Our JN0-351 test torrents are compiled by professionals and the answers and the questions we provide are based on the real exam. The content of our JN0-351 exam questions is simple to be understood and mastered. To let you get well preparation for the exam, our software provides the function to stimulate the real exam and the timing function to help you adjust the speed. Based on those merits of our JN0-351 Guide Torrent you can pass the JN0-351 exam with high possibility.
