Key Features of Salesforce Plat-Admn-202 PDF Questions By 2Pass4sure

The software version is one of the three versions of our Plat-Admn-202 exam prep. The software version has many functions which are different with other versions'. On the one hand, the software version of Plat-Admn-202 test questions can simulate the real examination for all users. By actually simulating the test environment, you will have the opportunity to learn and correct self-shortcoming in study course. On the other hand, although you can just apply the software version in the windows operation system, the software version of Plat-Admn-202 Exam Prep will not limit the number of your computer. If you use the software version, you can download the app more than one computer, but you can just apply the software version in the windows operation system. We believe the software version of our Plat-Admn-202 test torrent will be very useful for you, we hope you can pass you exam and get your certificate successfully.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details

Topic 1	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 2	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 3	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 4	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 5	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.

Salesforce Certified Platform App Builder Sample Questions (Q284-Q289):

NEW QUESTION # 284
DreamMouse Realty has a mentorship program that pairs experienced Realtors with new Realtors. Each experienced Realtor can mentor one or several new Realtors, and each new Realtor is required to work with a single experienced Realtor they report to for a probationary period.
What type of relationship would an app builder set up to meet this specification?

- A. Master-detail
- B. Many-to-many
- C. Lookup
- D. Indirect lookup

Answer: C

Explanation:
Lookup is the type of relationship that would be set up to meet the specification of pairing experienced Realtors with new Realtors. According to the Salesforce documentation, "A lookup relationship creates a loose association between objects. The lookup field allows users to select a record from another object." Indirect lookup is used for junction objects on different platforms. Many-to-many is not a type of relationship, but a result of using junction objects. Master-detail is used for creating parent-child relationships.

NEW QUESTION # 285

DreamHouse Realty (DHR) recently acquired Cloud Kicks (CK), a company that is still on Salesforce Classic. DHR is keeping the CK Salesforce org; however, it will migrate this org to Lightning Experience.

Where should the app builder find prebuilt resources to help with this project and overall adoption?

- A. Import Wizard
- B. AppExchange
- C. Flow Builder
- D. Lightning Object Creator

Answer: B

Explanation:

AppExchange is a marketplace where app builders can find prebuilt resources to help with migration and adoption projects. AppExchange offers apps, components, solutions, and consulting services that can assist with moving from Classic to Lightning Experience. Import Wizard, Lightning Object Creator, and Flow Builder are not sources of prebuilt resources, but tools for data import, object creation, and automation respectively.

NEW QUESTION # 286

Ursa Major Solar (UMS) uses a public sharing model for accounts. UMS would like to move to a more restrictive sharing model but wants the Sales team to continue to have access to all account records with the sales record type.

Which two actions should an app builder complete to implement this change?

Choose 2 answers

- A. Update the organization-wide defaults
- B. Update the Sales profile.
- C. Create a criteria-based sharing rule.
- D. Create an owner-based sharing rule.

Answer: A,C

Explanation:

Update the organization-wide defaults and create a criteria based sharing rule are two actions that an app builder should complete to implement the change of moving to a more restrictive sharing model while allowing the Sales team to access all account records with the sales record type. Updating the organization-wide defaults can set the baseline level of access for accounts, and creating a criteria based sharing rule can grant additional access based on record type. Updating the Sales profile and creating an owner-based sharing rule are not necessary or sufficient actions for this change.

NEW QUESTION # 287

Universal Containers uses a custom picklist field Account Region on the account record. They want this region to be reflected on all related contact records and stay in sync if the value of this field changes on the Account.

How should an app builder meet this requirement?

- A. Create a text field called 'Account Region' on Contact object > Create a workflow rule to update this picklist field if the Account Region field on the Account is changed.
- B. Create a formula field on the Contact object > Set the value of the formula to ISPICKVAL(Account.Account_Region__c).
- C. Create a picklist field called 'Account Region' on Contact object > Create a workflow rule to update this picklist field if the Account Region field on the Account is changed.
- D. Create a formula field on the Contact object > Set the value of the formula to TEXT(Account.Account_Region__c).

Answer: D

Explanation:

Creating a formula field on the Contact object and setting the value of the formula to TEXT(Account.Account_Region__c) would reflect the region of the related account on the contact record and stay in sync if the value changes on the account. This is the most efficient and maintainable way to meet the requirement. Creating a workflow rule or a picklist field would require additional configuration and complexity

NEW QUESTION # 288

An app builder has created a custom Lightning App and wants to make it available to the internal users at Universal Containers.
Which two steps are necessary to accomplish this task?
Choose 2 answers

- A. Build a Custom Tab for the app.
- B. Upload the app to Static Resources.
- C. Create a subdomain using My Domain.
- D. Add the app to a Visualforce page.

Answer: A,C

Explanation:
The app builder needs to do two steps to make the custom Lightning App available to the internal users at Universal Containers:
Create a subdomain using My Domain: My Domain is a feature that allows an organization to set up a custom domain name for their Salesforce instance. This is required to use custom Lightning components and apps in Salesforce1.
Build a Custom Tab for the app: A custom tab is a tab that displays any custom object or web page in Salesforce. This is required to make the custom Lightning App accessible from the navigation menu or app launcher2. Option A and B are not necessary steps to make the custom Lightning App available to the internal users.
