Axis Network Video Exam Sample Questions (Q144-Q149):

NEW QUESTION # 144

How can using PoE to power cameras help keep them running during a power outage?

- A. PoE cameras use less cabling, allowing backup power supplies to last longer
- **B. PoE cameras are centrally powered from the Ethernet switches which are backed up by uninterrupted power supply (UPS)**
- C. The PoE standard requires connected devices to include backup batteries, to allow for network dropouts
- D. Since PoE cameras are centrally powered by the server, you will only need to add backup power to the server to keep the system running

Answer: B

Explanation:

Using PoE (Power over Ethernet) to power cameras helps keep them running during a power outage because PoE cameras are centrally powered from the Ethernet switches, which are often backed up by an uninterrupted power supply (UPS). This means that in the event of a power failure, the UPS can provide temporary power to the switches and, consequently, to the connected PoE cameras, ensuring continuous operation.

NEW QUESTION # 145

Axis recommends shielded cables for outdoor installations primarily to ensure

- A. Image quality.
- B. Life time of cable installations.
- C. Conformity with SMPTE standard.
- **D. Surge protection.**

Answer: D

NEW QUESTION # 146

What is the purpose of the indicators in the lower part of this image?

- A. They provide shortcuts to preset camera positioning
- B. They help an installer ensure the camera is mounted straight
- C. They provide an easy way to set a camera's focus and zoom
- **D. They show an operator the current direction a PTZ camera is facing**

Answer: D

Explanation:

"The compass-style indicators in the user interface display the current pan direction of a PTZ camera. This helps operators orient themselves and know which direction the camera is facing in real-time."

- Axis Communications Academy, Network Video Fundamentals, 2022

"On-screen compass indicators are designed to show operators the camera's current field of view, making navigation and incident tracking easier."

NEW QUESTION # 147

What type of lens is this?

- A. An M12 lens
- B. A block lens
- C. A C-mount lens
- D. A CS-mount lens

Answer: A

Explanation:

"M12 lenses are easily recognized by their small size and the thread on the lens barrel. The M12 refers to the metric thread diameter (12 mm), which is much smaller than C/CS-mount lenses. These are often used in compact and modular camera models."

- Axis Communications Academy, Network Video Fundamentals, 2022

"M12-mount lenses are also called 'board lenses' and are screwed directly into the camera's sensor module."

NEW QUESTION # 148

When designing a network video system, which are the benefits of configuring VLANs? (Select two)

- A. It keeps the network traffic separated from other networks
- B. It increases the network bandwidth
- C. Interconnectivity between networks is enabled
- D. It helps avoid network congestion
- E. In some cases, it lowers the bandwidth consumption

Answer: A,D

Explanation:

Configuring VLANs (Virtual Local Area Networks) in a network video system has several benefits. Firstly, VLANs keep network traffic separated from other networks, enhancing security and ensuring that video data does not mix with other types of traffic. This separation is crucial for maintaining the integrity and security of the video streams. Secondly, VLANs help avoid network congestion by logically segmenting the network, which improves overall network performance and reduces the likelihood of traffic bottlenecks.

Axis documentation supports the use of VLANs to enhance network efficiency and security in video surveillance systems.
