

Reliable SPLK-4001 Test Testking | SPLK-4001 Valid Test Pdf

2026 Latest VerifiedDumps SPLK-4001 PDF Dumps and SPLK-4001 Exam Engine Free Share: https://drive.google.com/open?id=1nc-JY4aMTeh9icc6SxIWjODXXC5_25QE

All SPLK-4001 exam questions are available at an affordable cost and fulfill all your training needs. VerifiedDumps knows that applicants of the SPLK-4001 examination are different from each other. Each candidate has different study styles and that's why we offer our Splunk O11y Cloud Certified Metrics User SPLK-4001 product in three formats. These formats are Splunk SPLK-4001 PDF, desktop practice test software, and web-based practice exam.

The Splunk SPLK-4001 Exam consists of 65 questions that are to be completed in 90 minutes. The questions are in a multiple-choice format with a passing score of 70% or higher. Splunk O11y Cloud Certified Metrics User certification is valid for two years and must be renewed after the expiration date. There is a registration fee to take the exam, and the exam can be taken at any Pearson VUE test center or online through remote proctoring. Splunk O11y Cloud Certified Metrics User certification exam requires thorough preparation, including self-study, practice tests, and attending Splunk training courses.

100% Pass SPLK-4001 - Splunk O11y Cloud Certified Metrics User – Trustable Reliable Test Testking

If you buy the SPLK-4001 training files from our company, you will have the right to enjoy the perfect service. We have employed a lot of online workers to help all customers solve their problem. If you have any questions about the SPLK-4001 learning materials, do not hesitate and ask us in your anytime, we are glad to answer your questions and help you use our SPLK-4001 study questions well. We believe our perfect service will make you feel comfortable when you are preparing for your SPLK-4001 exam.

The SPLK-4001 Exam is a valuable certification for individuals who want to demonstrate their skills in using Splunk to monitor and analyze metrics in cloud-based environments. By passing the exam, candidates can show that they have the knowledge and expertise to create and manage metric-based monitoring solutions using Splunk. With the help of Splunk's training and resources, candidates can prepare for the exam and take the first step towards becoming a certified Splunk professional.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q48-Q53):

NEW QUESTION # 48

In the Splunk distribution of the OpenTelemetry Collector, what is the difference between the `agent_config.yaml` and the `splunk-otel-collector.conf` files?

- A. `splunk-otel-collector.conf` configures processors and `agent_config.yaml` sets the memory limits for the collector.
- B. `agent_config.yaml` configures the gateway's address and `splunk-otel-collector.conf` sets the memory limits for the collector.
- C. `splunk-otel-collector.conf` defines the OpenTelemetry pipeline, and `agent_config.yaml` sets endpoint URLs and access tokens.
- D. `agent_config.yaml` defines the OpenTelemetry pipeline, and `splunk-otel-collector.conf` sets endpoint URLs and access tokens.

Answer: C

NEW QUESTION # 49

What is one reason a user of Splunk Observability Cloud would want to subscribe to an alert?

- A. To receive an email notification when a detector is triggered.
- B. To be able to modify the alert parameters.
- C. To perform transformations on the data used by the detector.
- D. To determine the root cause of the Issue triggering the detector.

Answer: A

Explanation:

Explanation

One reason a user of Splunk Observability Cloud would want to subscribe to an alert is C. To receive an email notification when a detector is triggered.

A detector is a component of Splunk Observability Cloud that monitors metrics or events and triggers alerts when certain conditions are met. A user can create and configure detectors to suit their monitoring needs and goals¹. A subscription is a way for a user to receive notifications when a detector triggers an alert. A user can subscribe to a detector by entering their email address in the Subscription tab of the detector page. A user can also unsubscribe from a detector at any time². When a user subscribes to an alert, they will receive an email notification that contains information about the alert, such as the detector name, the alert status, the alert severity, the alert time, and the alert message. The email notification also includes links to view the detector, acknowledge the alert, or unsubscribe from the detector². To learn more about how to use detectors and subscriptions in Splunk Observability Cloud, you can refer to these documentations^{1,2}.

1: <https://docs.splunk.com/Observability/alerts-detectors-notifications/detectors.html> 2:

<https://docs.splunk.com/Observability/alerts-detectors-notifications/subscribe-to-detectors.html>

NEW QUESTION # 50

When writing a detector with a large number of MTS, such as `memory_free` in a deployment with 30,000 hosts, it is possible to exceed the cap of MTS that can be contained in a single plot. Which of the choices below would most likely reduce the number of MTS below the plot cap?

- A. Add a filter to narrow the scope of the measurement.
- B. Add a restricted scope adjustment to the plot.
- C. Select the Sharded option when creating the plot.
- D. When creating the plot, add a discriminator.

Answer: A

Explanation:

Explanation

The correct answer is B. Add a filter to narrow the scope of the measurement.

A filter is a way to reduce the number of metric time series (MTS) that are displayed on a chart or used in a detector. A filter specifies one or more dimensions and values that the MTS must have in order to be included.

For example, if you want to monitor the memory.free metric only for hosts that belong to a certain cluster, you can add a filter like cluster:my-cluster to the plot or detector. This will exclude any MTS that do not have the cluster dimension or have a different value for it. Adding a filter can help you avoid exceeding the plot cap, which is the maximum number of MTS that can be contained in a single plot. The plot cap is 100,000 by default, but it can be changed by contacting Splunk Support. To learn more about how to use filters in Splunk Observability Cloud, you can refer to this documentation.

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:

<https://docs.splunk.com/Observability/gdi/metrics/detectors.html#Plot-cap> 3:

NEW QUESTION # 51

When writing a detector with a large number of MTS, such as memory.free in a deployment with 30,000 hosts, it is possible to exceed the cap of MTS that can be contained in a single plot. Which of the choices below would most likely reduce the number of MTS below the plot cap?

- A. Add a filter to narrow the scope of the measurement.
- B. Add a restricted scope adjustment to the plot.
- C. Select the Sharded option when creating the plot.
- D. When creating the plot, add a discriminator.

Answer: A

Explanation:

The correct answer is B. Add a filter to narrow the scope of the measurement.

A filter is a way to reduce the number of metric time series (MTS) that are displayed on a chart or used in a detector. A filter specifies one or more dimensions and values that the MTS must have in order to be included. For example, if you want to monitor the memory.free metric only for hosts that belong to a certain cluster, you can add a filter like cluster:my-cluster to the plot or detector. This will exclude any MTS that do not have the cluster dimension or have a different value for it. Adding a filter can help you avoid exceeding the plot cap, which is the maximum number of MTS that can be contained in a single plot. The plot cap is 100,000 by default, but it can be changed by contacting Splunk Support. To learn more about how to use filters in Splunk Observability Cloud, you can refer to this documentation.

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:

<https://docs.splunk.com/Observability/gdi/metrics/detectors.html#Plot-cap> 3:

<https://docs.splunk.com/Observability/gdi/metrics/search.html>

NEW QUESTION # 52

Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Count: (Id)
- B. Lag: (24h)
- C. Maximum: Transformation (24h)
- D. Maximum: Aggregation (Id)

Answer: C

Explanation:

Explanation

According to the Splunk Observability Cloud documentation, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:

```
maximum(24h, counters("page.visits"))
```

This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.
