Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q372-Q377):

NEW QUESTION # 372

Refer to the exhibit:

BGPsec is implemented on R1, R2, R3, and R4. BGP peering is established between neighboring autonomous systems. Which statement about implementation is true?

- A. BGP updates from the eBGP peers are appended with a BGPsec attribute sequence that includes a public key hash and digital signature
- B. BGP updates from the iBGP peers are appended with a community of local-as
- C. BGP updates from the all BGP peers are appended with a community of no export
- D. BGP updates from the eBGP peers are appended with an additional AS path value that is statically set by the domain administrator

Answer: A

Explanation:

BGPsec enhances BGP by adding a layer of security for the AS path attribute. When BGPsec is implemented, updates from eBGP peers include a BGPsec attribute sequence with a public key hash and digital signature. This ensures the authenticity and integrity of the AS path, preventing unauthorized AS numbers from being inserted.
