Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant You can use Real Questions to guide your search for a Salesforce. Data-Cloud-Consultant You can get ready for the Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant test with the aid of Exam Dumps. the exam code Consider the inquiries. The Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant practise test software is valid for Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant. the exam code Exam simulation practise tests, Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant the exam code Final Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant Dumps for Exam success requires familiarity with the most recent question types and effective time management.

You will receive Data-Cloud-Consultant exam materials immediately after your payment is successful, and then, you can use Data-Cloud-Consultant test guide to learn. Everyone knows that time is very important and hopes to learn efficiently, especially for those who have taken a lot of detours and wasted a lot of time. Once they discover Data-Cloud-Consultant study braindumps, they will definitely want to seize the time to learn. However, students often purchase materials from the Internet, who always encounters a problem that they have to waste several days of time on transportation, especially for those students who live in remote areas. But with Data-Cloud-Consultant Exam Materials, there is no way for you to waste time. The sooner you download and use Data-Cloud-Consultant study braindumps, the sooner you get the certificate.

## Data-Cloud-Consultant Detailed Answers & Data-Cloud-Consultant Exam Study Solutions

For candidates who are going to buy Data-Cloud-Consultant exam bootcamp online, they may pay more attention to privacy protection, and if you are choose us, we can ensure that your personal information will be protected well. Once the order finishes, your personal information such as your name and email address will be protected well. In addition, Data-Cloud-Consultant Exam Dumps contain both questions and answers, and you can have a quickly check after practicing. Online and offline service are

available for Data-Cloud-Consultant exam bootcamp, if you have any questions, don't hesitate to consult us.

## Salesforce Data-Cloud-Consultant Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Segmentation and Insights: This topic defines basic concepts of segmentation and use cases, identifies scenarios for analyzing segment membership, configuring, refining, and maintaining segments within Data Cloud, and differentiating between calculated and streaming insights.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Data Cloud Setup and Administration: This topic includes applying Data Cloud permissions, permission sets, org-wide settings. It describes and configures data stream types, and data bundles. Moreover, it discusses use cases for data spaces, creating data spaces, managing and administering Data Cloud using reports, dashboards, flows, packaging, data kits, diagnosing and exploring data using Data Explorer, Profile Explorer, and APIs.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Act on Data: This topic defines activations and their basic use cases, using attributes and related attributes, identifying and analyzing timing dependencies affecting the Data Cloud lifecycle. Additionally it focuses on troubleshooting common problems with activations, and using data actions, including their requirements and intended use cases.</li></ul>

## Salesforce Certified Data Cloud Consultant Sample Questions (Q43-Q48):

### NEW QUESTION # 43

Which two steps should a consultant take if a successfully configured Amazon S3 data stream fails to refresh with a "NO FILE FOUND" error message?

Choose 2 answers

- A. Check if the Amazon S3 data source is enabled in Data Cloud Setup.
- B. Check If the file exists in the specified bucket location.
- C. Check if correct permissions are configured for the S3 user.
- D. Check if correct permissions are configured for the Data Cloud user.

**Answer: B,D**

Explanation:

A "NO FILE FOUND" error message indicates that Data Cloud cannot access or locate the file from the Amazon S3 source. There are two possible reasons for this error and two corresponding steps that a consultant should take to troubleshoot it:

\* The Data Cloud user does not have the correct permissions to read the file from the Amazon S3 bucket.

This could happen if the user's permission set or profile does not include the Data Cloud Data Stream Read permission, or if the user's Amazon S3 credentials are invalid or expired. To fix this issue, the consultant should check and update the user's permissions and credentials in Data Cloud and Amazon S3, respectively.

\* The file does not exist in the specified bucket location. This could happen if the file name or path has changed, or if the file has been deleted or moved from the Amazon S3 bucket. To fix this issue, the consultant should check and verify the file name and path in the Amazon S3 bucket, and update the data stream configuration in Data Cloud accordingly. ### NEW QUESTION # 44

How does Data Cloud handle an individual's Right to be Forgotten?

- A. Deletes the specified Individual and records from any data source object mapped to the Individual data model object.
- B. Deletes the specified Individual and records from any data model object/data lake object related to the Individual.
- C. Deletes the specified Individual record and its Unified Individual Link record.
- D. Deletes the records from all data source objects, and any downstream data model objects are updated at the next scheduled ingestion

**Answer: B**

Explanation:

Data Cloud handles an individual's Right to be Forgotten by deleting the specified Individual and records from any data model object/data lake object related to the Individual. This means that Data Cloud removes all the data associated with the individual from the data space, including the data from the source objects, the unified individual profile, and any related objects. Data Cloud also deletes the Unified Individual Link record that links the individual to the source records. Data Cloud uses the Consent API to process the Right to be Forgotten requests, which are reprocessed at 30, 60, and 90 days to ensure a full deletion.

The other options are not correct descriptions of how Data Cloud handles an individual's Right to be Forgotten. Data Cloud does not delete the records from all data source objects, as this would affect the data integrity and availability of the source systems. Data Cloud also does not delete only the specified Individual record and its Unified Individual Link record, as this would leave the source records and the related records intact. Data Cloud also does not delete only the specified Individual and records from any data source object mapped to the Individual data model object, as this would leave the related records intact.

#### NEW QUESTION # 45

Cumulus Financial wants to be able to track the daily transaction volume of each of its customers in real time and send out a notification as soon as it detects volume outside a customer's normal range.

What should a consultant do to accommodate this request?

- A. Use streaming data transform with a flow.
- **B. Use a streaming insight paired with a data action**
- C. Use streaming data transform combined with a data action.
- D. Use a calculated insight paired with a flow.

**Answer: B**

Explanation:

Explanation

A streaming insight is a type of insight that analyzes streaming data in real time and triggers actions based on predefined conditions. A data action is a type of action that executes a flow, a data action target, or a data action script when an insight is triggered. By using a streaming insight paired with a data action, a consultant can accommodate Cumulus Financial's request to track the daily transaction volume of each customer and send out a notification when the volume is outside the normal range. A calculated insight is a type of insight that performs calculations on data in a data space and stores the results in a data extension. A streaming data transform is a type of data transform that applies transformations to streaming data in real time and stores the results in a data extension. A flow is a type of automation that executes a series of actions when triggered by an event, a schedule, or another flow. None of these options can achieve the same functionality as a streaming insight paired with a data action. #### NEW QUESTION # 46

A consultant needs to package Data Cloud components from one organization to another.

Which two Data Cloud components should the consultant include in a data kit to achieve this goal?

Choose 2 answers

- **A. Data model objects**
- **B. Identity resolution rulesets**
- C. Segments
- D. Calculated insights

**Answer: A,B**

Explanation:

Explanation

To package Data Cloud components from one organization to another, the consultant should include the following components in a data kit:

- \* Data model objects: These are the custom objects that define the data model for Data Cloud, such as Individual, Segment, Activity, etc. They store the data ingested from various sources and enable the creation of unified profiles and segments<sup>1</sup>.
- \* Identity resolution rulesets: These are the rules that determine how data from different sources are matched and merged to create unified profiles. They specify the criteria, logic, and priority for identity resolution<sup>2</sup>. References:
  - \* 1: Data Model Objects in Data Cloud
  - \* 2: Identity Resolution Rulesets in Data Cloud

#### NEW QUESTION # 47

Northern Trail Outfitters (NTO) wants to send a promotional campaign for customers that have purchased within the past 6 months. The consultant created a segment to meet this requirement. Now, NTO brings an additional requirement to suppress customers who have made purchases within the last week. What should the consultant use to remove the recent customers?

- A. Segmentation exclude rules
- B. Batch transforms
- C. Related attributes
- D. Streaming insight

**Answer: A**

Explanation:

The consultant should use B. Segmentation exclude rules to remove the recent customers. Segmentation exclude rules are filters that can be applied to a segment to exclude records that meet certain criteria. The consultant can use segmentation exclude rules to exclude customers who have made purchases within the last week from the segment that contains customers who have purchased within the past 6 months. This way, the segment will only include customers who are eligible for the promotional campaign. The other options are not correct. Option A is incorrect because batch transforms are data processing tasks that can be applied to data streams or data lake objects to modify or enrich the data. Batch transforms are not used for segmentation or activation. Option C is incorrect because related attributes are attributes that are derived from the relationships between data model objects. Related attributes are not used for excluding records from a segment. Option D is incorrect because streaming insights are derived attributes that are calculated at the time of data ingestion. Streaming insights are not used for excluding records from a segment. References: Salesforce Data Cloud Consultant Exam Guide, Segmentation, Segmentation Exclude Rules

#### NEW QUESTION # 48

.....

The Salesforce Data-Cloud-Consultant real exam simulation by the software helps you counter Data-Cloud-Consultant exam anxiety. You need to install the desktop software on Windows to take the practice test. Our web-based Data-Cloud-Consultant Practice Test has all specs of the desktop software. The only difference is that this Salesforce Data-Cloud-Consultant practice test works online using any operating system and browsers.
