Free PDF CTFL-AT Books PDF | Easy To Study and Pass Exam at first attempt & Updated CTFL-AT: ISTQB Certified Tester - Foundation Level Extension - Agile Tester

The solution is closer to you than you can imagine, just contact the support team and continue enjoying your study with the ISTQB Certified Tester - Foundation Level Extension - Agile Tester preparation material. Prep4SureReview offers affordable ISTQB Certified Tester - Foundation Level Extension - Agile Tester exam preparation material. You don't have to go beyond your budget to buy updated ISQI CTFL-AT Dumps. To make your CTFL-AT exam preparation material smooth, a bundle pack is also available that includes all the 3 formats of dumps questions.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which of the following would provide the MOST independence for testers working with agile teams?

- A. Testers from an independent test team are assigned to the Agile team at the beginning of the project, returning for re-assignment to a new agile team.
- B. Testers from an independent test team who do not get involved with the Agile team, but are assigned to do System Testing once all sprints are completed.
- C. Testers from an independent test team are assigned on-demand for the final days of each sprint.
- D. Testers are fully embedded in each Agile team to perform many of the testing tasks.

Answer: B

NEW QUESTION # 48

Which of the following statements about the testing quadrants model is true?

- A. Each of the four testing quadrants (Q1, Q2, Q3, and Q4) contains different test types and test levels, and these quadrants are numbered to describe the risk level associated with the test types (Q1 = least risky, Q4 = most risky)
- B. Each of the four testing quadrants (Q1, Q2, Q3, and Q4) represents a different test level (Q1 = Unit, Q2 = Integration, Q3 = System, and Q4 = Acceptance) and describes the different test types that shall be performed by Agile teams in that test level for an Agile project
- C. Each of the four testing quadrants (Q1, Q2, Q3, and Q4) contains different test types and test levels, and these quadrants can be used by Agile teams and other stakeholders to ensure that all important test types and test levels are included in an Agile project
- D. Each of the four testing quadrants (Q1, Q2, Q3, and Q4) contains different test types and test levels, and these quadrants are numbered to describe the order in which the associated test types and test levels shall be performed in an Agile project (Q1 first, Q4 last)

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 3.4 The Testing Quadrants, it states:

"The Agile testing quadrants are used to ensure that the team considers all important test types and levels during an Agile project. The quadrants categorize tests by their purpose (support development, critique the product) and by the type of feedback (business-facing vs technology-facing)." Thus, Option C correctly reflects the use and purpose of the quadrants as a guidance tool, not a fixed sequence or hierarchy.

* Option A and B are incorrect - the quadrants are not mapped to strict levels or chronological order.

* Option D is false - risk is not the basis for quadrant numbering.

Learning Objective (K2) - Understand the Agile testing quadrants

NEW QUESTION # 49

You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a bus ticket". As a result, a number of defects were reported, the titles of which are listed below.

Which defect is out of scope for the given test charter?

- A. Failed to buy a bus ticket when the network connection to the Central System is down.
- B. Payment for parking ticket is restricted to cash only (no credit card supported).
- C. Price for a bus ticket was calculated incorrectly.
- D. Failed to buy a bus ticket after 18:00.

Answer: B

Explanation:

The test charter for the exploratory testing session is focused on buying a bus ticket, not a parking ticket.

Therefore, any defect related to the payment for parking ticket is out of scope for the given test charter. The other defects are related to the functionality, usability, or reliability of buying a bus ticket, which are in scope for the test charter. NEW QUESTION # 50

Consider the following acceptance criterion associated to a user story:

"A maximum of 0.0002 failures per hour in the specified operational conditions over at least ten days of testing must be achieved."

Which of the following aspects of testability is best described in this acceptance criterion?

- A. Quality characteristics
- B. External interfaces
- C. Scenarios
- D. Functional behavior

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 2.1 Acceptance Criteria and Testability, and Section 3.1:

"Acceptance criteria may also address non-functional quality characteristics such as reliability, performance, and usability." The criterion references failure rate over time, which is a reliability attribute, making Option D (Quality characteristics) the correct answer.

* Option A (Scenarios) refers to usage paths.

* Option B refers to functional correctness.

* Option C refers to interface interaction points.

Learning Objective (K2) - Understand testability related to quality characteristics

NEW QUESTION # 51

Which two of the following statements are CORRECT with regards to test automation on agile projects?

- 1) Every test developed for past iterations is kept and executed as part of a regression suite for each new release of code.
- 2) It would be very difficult to ensure high quality in an agile project without test automation.
- 3) Automated acceptance tests are run regularly as part of the continuous integration full system build.
- 4) Automated regression suites are only run for the final release of code.
- 5) In agile projects, the results from automated acceptance tests provide feedback on the overall product quality.

- A. 3, 4
- B. 2, 3
- C. 2, 5
- D. 1, 3

Answer: C

Explanation:

Test automation is essential for agile projects, as it enables fast and frequent feedback on the quality of the product. Without test automation, it would be very difficult to ensure high quality in an agile project, as manual testing would be too slow and costly to keep up with the pace of development. Automated acceptance tests are one of the key types of test automation on agile projects, as they verify that the user stories are implemented correctly and that the product meets the customer's expectations. Automated acceptance tests are run regularly as part of the continuous integration full system build, and the results provide feedback on the overall product quality. Therefore, statements 2 and 5 are correct with regards to test automation on agile projects. References: 1:
