P.S. Free 2026 Zscaler ZDTA dumps are available on Google Drive shared by DumpsKing: https://drive.google.com/open?id=1-YVa9QdV9KeTfe3nDd5iHii_Vn2yabx

We are pretty confident that thousands of ZDTA exam candidates have passed their dream ZDTA certification exam and if you start today you will be the next successful ZDTA exam candidate. Three formats of our ZDTA practice test material come with free demos and up to 1 year of free updates. So choose the right DumpsKing Zscaler Digital Transformation Administrator (ZDTA) exam questions format and download it after paying reasonable charges and start ZDTA exam preparation without wasting further time.

Zscaler ZDTA Exam Syllabus Topics:

Section	Objectives
	- Visibility and Analytics
Monitoring and Operations	1. User and application performance monitoring 2. Logging and reporting concepts

	- Authentication and Authorization • 1. Identity provider integration concepts • 2. SAML, SCIM, OIDC fundamentals
Identity Services	- Identity Administration • 1. User provisioning and lifecycle management • 2. Audit logs and identity policies - Secure Access Architecture • 1. Internet and private application access • 2. Zero Trust Exchange connectivity model
Connectivity Services	- Client and Network Configuration • 1. Trusted network and posture checks • 2. Zscaler Client Connector usage - Access Control Policies • 1. Least privilege access principles • 2. User and device-based policy enforcement
Security Policy and Enforcement	- Threat Protection • 1. SSL/TLS inspection concepts • 2. Basic cyberthreat protection services

ZDTA Examcollection Dumps - ZDTA Testking Exam Questions

If you want to pass the exam smoothly buying our ZDTA useful test guide is your ideal choice. They can help you learn efficiently, save your time and energy and let you master the useful information. Our passing rate of ZDTA study tool is very high and you needn't worry that you have spent money and energy on them but you gain nothing. We provide the great service after you purchase our ZDTA cram training materials and you can contact our customer service at any time during one day. It is a pity if you don't buy our ZDTA study tool to prepare for the test ZDTA certification.

Zscaler Digital Transformation Administrator Sample Questions (Q150-Q155):

NEW QUESTION # 150

What is the ZIA feature that ensures certain SaaS applications cannot be accessed from an unmanaged device?

- A. Identity Proxy
- B. Out-of-band Application Access
- C. SaaS Application Access
- **D. Tenant Restriction**

Answer: D

Explanation:

Tenant Restriction lets ZIA distinguish the approved corporate tenant of a SaaS application from personal or unmanaged tenants. That matters when the user is on an unmanaged device, because the administrator may allow the corporate tenant only from trusted or managed contexts. Option A (Tenant Restriction) is correct because Tenant Restriction is the SaaS-specific control that enforces corporate-tenant access boundaries.

Why the other options are incorrect:

B). Identity Proxy: Identity Proxy helps broker identity and authentication flows for SaaS access. Tenant Restriction is the control

that separates corporate SaaS tenants from personal ones.

C). Out-of-band Application Access: Out-of-band CASB works through SaaS APIs to inspect or remediate content already sitting inside cloud applications.

D). SaaS Application Access: SaaS Application Access is a broad access concept. The specific ZIA feature that blocks unmanaged-device access to a SaaS tenant is Tenant Restriction.

NEW QUESTION # 151

A user authenticates through an IdP. The SAML assertion and SCIM provisioning return different group memberships. Which placement and policy-evaluation outcome ensures the most consistently up-to-date results?

- A. Place the user into SCIM-synchronized groups that drive ZIA and ZPA service entitlements, evaluated with SAML and SCIM attributes in the Policy Framework.
- B. Place the user into the IdP Entity ID-specific realm, evaluated against ZPA policies that derive access primarily from the department attribute.
- C. Place the user in a local ZIdentity group inferred from NameID, evaluated against ZIA policies that prioritize session MFA status over SCIM groups.
- D. Place the user into a transient session group based on MFA, evaluated against ZIA Firewall rules that map Entity ID to service entitlements.

Answer: A

Explanation:

Answer A is correct. Zscaler recommends SCIM provisioning over JIT-only provisioning because SCIM can proactively synchronize users and groups at scheduled or on-demand intervals, rather than waiting for a new login assertion. Those synchronized groups can receive ZIA and ZPA service entitlements and can be referenced as SCIM group criteria in Private Access policies. ZPA can also evaluate SAML session attributes when those attributes are required, but administrators should define one authoritative mapping and investigate any discrepancy between the SAML assertion and the SCIM directory state. Entity ID selects or identifies the IdP; it does not itself create the correct authorization group. NameID, MFA status, and firewall rules likewise do not replace service entitlement and group assignment. See Zscaler's external IdP guidance and SCIM identity-management configuration.

NEW QUESTION # 152

A firewall policy set evaluates rules from top to bottom and stops at the first match. Rule 1 allows Marketing users outbound TCP 80/443 to any destination. Rule 2 blocks the Anonymizers network-application category globally. Rule 3 blocks all traffic to 203.0.113.0/24.

What outcome and risk are most likely when a Marketing user accesses an anonymizer over HTTPS?

- A. Traffic is inspected by IPS before Firewall Filtering and is dropped preemptively, reducing the effect of rule order but causing false positives
- B. Traffic is deferred to application categorization first and is blocked at Rule 2, with the user denied but with ambiguous logging
- C. Traffic matches the Marketing allow at Rule 1, the global anonymizer block is not evaluated, and the user gains access to anonymizers, increasing exposure
- D. Traffic collides with the destination block at Rule 3 because of subnet inference, resulting in intermittent denial and noisy alerts

Answer: C

Explanation:

Rule 1 can match immediately on the user, protocol, and destination port, so its Allow action terminates evaluation before the anonymizer or subnet blocks are considered. Zscaler's network-application guidance distinguishes application-aware rules from rules capable of a first-packet match, while its recommended Firewall Control Policy emphasizes granular higher-order controls above broad allowances. The result is predictable shadowing: Marketing receives unrestricted HTTPS access, including anonymizers, and gains an evasion path that can conceal malicious activity or data transfer. The global application rule does not automatically override an earlier match, and IPS does not replace the Firewall Filtering decision described.

Rule 3 applies only when the destination belongs to the specified subnet; no such fact is given. The policy should place required global blocks before broad departmental allows or narrow the allow's destination and application criteria.

NEW QUESTION # 153

Which of the following features protects traffic to internal applications from attacks such as cross-site scripting (XSS), cookie poisoning, and SQL injection?

- A. Zscaler Private AppProtection
- B. Zscaler Cloud Firewall
- C. Zscaler Digital Experience
- D. ZIdentity

Answer: A

Explanation:

Comprehensive and Detailed 100 to 150 words of Explanation From Zscaler Digital Transformation Administrator topics: Zscaler Private AppProtection is designed to protect private applications against application-layer attacks, making C correct. It applies inline security inspection to traffic accessing internal web applications and can identify or prevent techniques such as cross-site scripting, SQL injection, and cookie manipulation. This provides protection comparable to web application security controls without exposing the private application directly to the internet. Zscaler Digital Experience monitors performance and user experience but is not the enforcement service for these attacks. ZIdentity provides authentication, identity, and entitlement capabilities. Zscaler Cloud Firewall enforces network and application traffic policy, but it is not the private-application protection feature described here. The official ZDTA study guide associates Private AppProtection with controls for XSS, SQL injection, and related threats to private applications.

NEW QUESTION # 154

The Zscaler platform can protect against malicious files, URLs and content based on a number of criteria including reputation type. What type of checking is virus scanning?

- A. SHA-256 hashing
- B. Malware protection
- C. File reputation
- D. Site reputation

Answer: B

Explanation:

Virus scanning in the Zscaler platform is part of its Malware Protection capability, which inspects file content against known virus signatures and behaviors.

NEW QUESTION # 155

.....

The DumpsKing has specially designed the Zscaler ZDTA desktop practice exam software for the self-assessment of the learned concepts. Our Zscaler ZDTA desktop practice exam software can be installed on all types of windows operating computers. This is Zscaler ZDTA practice exam for the applicant's practice that could be solved without internet access. The Zscaler ZDTA exam questions preparation products have been designed to provide ease to their customers in all aspects. Everybody can use our ZDTA Exam Questions And Answers conveniently. We provide 365 days of free updates after the date of purchase so that you can get updated Zscaler ZDTA exam questions for the ZDTA exam preparation. DumpsKing offers reliable Zscaler ZDTA exam questions and also provides a 30% exclusive discount on all Zscaler exam questions. Use coupon code '30OFF' while purchasing Zscaler ZDTA exam questions preparation products.
