Achieve Success in the Oracle 1z0-076 Exam with Confidence

What's more, part of that TestkingPDF 1z0-076 dumps now are free: https://drive.google.com/open?id=1nIYhaoouaEeOJdAWnw31zx2wQQnuiD6b

If you are determined to enter into Oracle company or some companies who are the product agents of Oracle, a good certification will help you obtain more jobs and high positions. TestkingPDF release high passing-rate 1z0-076 exam simulations to help you obtain certification in a short time. If you obtain a certification you will get a higher job or satisfying benefits with our 1z0-076 Exam Simulations. Every day there is someone choosing our exam materials. If this is what you want, why are you still hesitating?

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.

Topic 2	• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 3	• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 4	• Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 5	• Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 6	• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 7	• Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 8	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 11	• Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.

If you still feel nervous for the exam, our 1z0-076 Soft test engine will help you to release your nerves. 1z0-076 Soft test engine can stimulate the real environment, and you can know the general process of exam by using the exam dumps. What's more, we provide you with free update for one year, and you can get the latest information for the 1z0-076 Learning Materials in the following year. We have online service stuff, if you have any questions about the 1z0-076 exam braindumps, just contact us.

Oracle Database 19c: Data Guard Administration Sample Questions (Q68-Q73):

NEW QUESTION # 68
You are licensed to use Oracle Active Data Guard.
Which TWO statements are true after enabling block change tracking on a physical standby database?

- A. It starts the CTWR process on the physical standby database instance.
- B. It starts the RVWR process on the physical standby database instance.
- C. It allows fast incremental backups to be offloaded to a snapshot standby database, when the physical standby database is converted.
- D. It allows fast incremental backups to be offloaded to the physical standby database.
- E. It allows fast incremental backups to be taken on the primary database.
- F. It starts the CTWR process on the primary database instance.

Answer: B,D

Explanation:
Block change tracking is a feature that enhances the efficiency of incremental backups by recording changed blocks in a tracking file. When used with Oracle Active Data Guard:

* It starts the RVWR process on the physical standby database instance (A): When block change tracking is enabled on a physical standby database, the Recovery Writer (RVWR) process is initiated.
This process is responsible for recording the changes to blocks in the block change tracking file, which is then used to optimize incremental backups.
* It allows fast incremental backups to be offloaded to the physical standby database (E): With block change tracking enabled on the physical standby database, fast incremental backups can be offloaded from the primary database. This reduces the workload on the primary database and utilizes the standby database for backup operations, improving overall system performance and efficiency.References:
* Oracle Database Backup and Recovery User's Guide
* Oracle Active Data Guard documentation

NEW QUESTION # 69
Which three statements are true about snapshot standby databases?

- A. A resize command to reduce the size of an empty datafile in the snapshot standby database, which was created in the primary database, will succeed.
- B. A resize command to reduce the size of an empty datafile in the snapshot standby database, which was created in the snapshot standby database, will succeed.
- C. A resize command to reduce the size of an empty datafile in the snapshot standby database, which was created in the physical standby database, will succeed.
- D. A resize command to extend the size of a datafile in the snapshot standby database, which was created in the snapshot standby database, will succeed.
- E. A resize command to extend the size of a datafile in the snapshot standby database, which was created in the primary database, will succeed.

Answer: B,D,E

NEW QUESTION # 70
Which three types of backups offload .... with the primary database in a data Guard

- A. Online logs
- B. Password files
- C. Broker configuration files
- D. Control files
- E. Data files
- F. Archive logs

Answer: D,E,F

Explanation:
In a Data Guard environment, you can offload the backups of certain database components to a physical standby database. Incremental backups of a standby database are interchangeable with the primary database, meaning you can apply a backup taken on a standby database to a primary database and vice versa. This includes control files, data files, and archive logs. Backups of control files and nonstandby control files are interchangeable. You can restore a standby control file on a primary database and a primary control file on a physical standby database, demonstrating their interchangeability and the ability to offload control file backups to one database in a Data Guard environment.

NEW QUESTION # 71
You must configure flashback database for your Oracle 19c databases that will be part of a Data Guard Broker configuration.
The databases are all in ARCHIVELOG mode.
You will execute the SQL statement:
ALTER DATABASE FLASHBACK ON;
Which three are true concerning this command?

- A. It will execute successfully while an Oracle 19c primary database is open.
- B. If executed successfully on an Oracle 19c primary database, flashback will also be enabled on all logical standby databases that are part of the configuration.

- C. If executed successfully on an Oracle 19c primary database, flashback will also be enabled on all physical standby databases that are part of the configuration.
- D. It will execute successfully while an Oracle 19c primary database is mounted.
- E. It will execute successfully on an Oracle 19c physical standby database while Real Time Query is active.
- F. It will execute successfully on an Oracle 19c logical standby database while SQL apply is active.

Answer: A,D,F

Explanation:
The command ALTER DATABASE FLASHBACK ON; enables the Flashback Database feature, which provides a way to quickly revert an entire Oracle database back to a previous point in time. This command can be executed while an Oracle 19c primary database is either open (option A) or mounted (option B). It is also applicable to an Oracle 19c logical standby database while SQL Apply is active (option E). However, it's important to note that enabling Flashback Database on the primary does not automatically enable it on all associated standby databases, whether they are physical or logical. Each database in a Data Guard configuration must have Flashback Database explicitly enabled if desired. Real Time Query being active on a physical standby does not directly relate to the ability to execute this command on the standby. References:
The explanation is based on Oracle's concepts for Flashback Technology and Data Guard configurations as detailed in the Oracle Database Backup and Recovery User's Guide and the Oracle Data Guard Concepts and Administration guide.

NEW QUESTION # 72

You must propose an Oracle Data Guard configuration for a database supporting an OLTP workload that meets these permanent requirements:
Data loss is not permitted.
Read-only applications should not connect to the primary database instance.
Additionally, there are these requirements, only one of which is ever done at any one time:
It should be possible to apply and test designated patches with a minimum amount of downtime.
Upgrading to a new database release should be performed with the least possible amount of downtime.
New application software releases should be tested against an exact up-to-date replica of the production database.
You propose a primary database with one physical standby database configured in Maximum Protection mode.
Which requirements do you meet?

- A. 1 and 2
- B. 2, 3, 4, and 5
- C. Only requirement 1
- D. 1, 2, 3, 4, and 5
- E. Only requirement 5

Answer: C

NEW QUESTION # 73
