PSPO-I Trainingsmaterialien: Professional Scrum Product Owner I & PSPO-I Lernmittel & Scrum PSPO-I Quiz

Melden Sie sich an Scrum PSPO-I Zertifizierungsprüfung an? Haben Sie vor zu vielen Prüfungsunterlagen Kopfschmerzen? Wir DeutschPrüfung können diese Probleme auflösen und wir sind die Website, an der Sie glauben können. Wenn Sie unsere Unterlagen zur Scrum PSPO-I Prüfung benutzen, können Sie sehr leicht die Scrum PSPO-I Prüfung bestehen. Sie sollen keine Zeit an den

Unterlagen verschwenden, die vielleicht keinen Sinn haben. Probieren Sie bitte den Service von DeutschPrüfung.

Scrum Professional Scrum Product Owner I PSPO-I Prüfungsfragen mit Lösungen (Q68-Q73):

68. Frage

True or False: During the Sprint Review the stakeholder 's role is to reorder the Product Backlog.

- A. True
- **B. False**

Antwort: B

Begründung:

During the Sprint Review, the stakeholder's role is not to reorder the Product Backlog, but rather to provide feedback and suggestions on the product and the process. Therefore, the answer is false because:

* The Sprint Review is an informal meeting, not a status meeting, and the presentation of the Increment is intended to elicit feedback and foster collaboration. The stakeholders are invited to attend the Sprint Review as observers, participants, or customers, and they can share their opinions, ideas, or requests regarding the product and its features, functionality, quality, value, etc.

* The ordering of the Product Backlog is the sole responsibility of the Product Owner. They order Product Backlog items to best achieve goals and missions. The Product Owner may consider the feedback and suggestions from the stakeholders, as well as other factors such as dependencies, risks, costs, etc., when ordering the Product Backlog. However, they are not obliged to follow or implement them.

* The Product Backlog is not a fixed or final list of requirements, but rather an emergent and dynamic artifact that represents all the possible changes to the product. The Product Owner is accountable for effective Product Backlog management, which includes refining, communicating, and optimizing the Product Backlog items. The Product Owner may update the Product Backlog at any time, not only during the Sprint Review.

References:

Scrum Guide 2020, page 11: "The ordering of the items in the Product Backlog is the sole responsibility of the Product Owner."

Scrum Guide 2020, page 11: "The Product Owner is accountable for effective Product Backlog management, which includes ...

ordering Product Backlog items; and ensuring that the Product Backlog is transparent, visible and understood." Scrum Guide 2020, page 15: "The Sprint Review is an informal meeting, not a status meeting, and the presentation of the Increment is intended to elicit feedback and foster collaboration."

69. Frage

What is a Product Owner typically responsible for during a Sprint?

(choose the best two answers)

- A. Updating the work plan for the Developers on a daily basis.
- **B. Collaborating with stakeholders, users, and customers.**
- C. Nothing.
- **D. Working with the Scrum Team on Product Backlog refinement.**
- E. Attending every Daily Scrum to answer questions about the Sprint Backlog items.
- F. Creating financial reporting upon the spent hours reported by the Developers.

Antwort: B,D

Begründung:

Explanation

The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team. The Product Owner is responsible for managing and refining the Product Backlog, collaborating with the stakeholders and the Developers, and ordering the items in a way that best achieves goals and missions. The Product Owner represents the interests of everyone with a stake in the product and ensures that the Scrum Team works on the right things at the right time.

A Sprint is a timebox of one month or less within which a "Done" product Increment is created. A Sprint consists of the Sprint Planning, Daily Scrums, the development work, the Sprint Review, and the Sprint Retrospective. A Sprint is also a feedback loop that allows the Scrum Team and the stakeholders to inspect and adapt the product and the process.

During a Sprint, a Product Owner is typically responsible for:

Collaborating with stakeholders, users, and customers: The Product Owner engages in frequent and regular interactions with the people who have a stake or interest in the product, such as customers, users, sponsors, managers, or other teams. The Product Owner solicits and incorporates their input, feedback, and insights to understand their needs and expectations, discover new

opportunities or ideas, align and collaborate on the product direction and priorities, and validate and deliver value to them

Working with the Scrum Team on Product Backlog refinement: The Product Owner works closely with the Developers to clarify, refine, and review the Product Backlog items and their acceptance criteria. The Product Owner provides clear and concise descriptions of what is needed and why it is valuable for each Product Backlog item. The Product Owner also empowers and trusts the Developers to make technical decisions and trade-offs that best meet the product goals and quality standards. The Product Owner also involves key stakeholders in defining and prioritizing the Product Backlog items and their acceptance criteria.

The other options are not valid or relevant responsibilities of a Product Owner during a Sprint. They are either too administrative, micromanaging, or unrelated to the product value delivery. They are:

Creating financial reporting upon the spent hours reported by the Developers: This is not a responsibility of a Product Owner during a Sprint. This is an administrative task that does not contribute to the value or quality of the product or service delivered. It may also create unnecessary overhead or bureaucracy for the Developers. The Product Owner should focus on maximizing value rather than tracking hours.

Updating the work plan for the Developers on a daily basis: This is not a responsibility of a Product Owner during a Sprint. This is a micromanaging task that does not respect the self-organization or cross-functionality of the Developers. The Developers are responsible for planning and executing their own work during a Sprint, based on their empirical experience and collaboration. The Developers also update their progress daily during the Daily Scrum event.

Nothing: This is not a valid answer for a Product Owner's responsibility during a Sprint. A Product Owner has many important responsibilities during a Sprint, as mentioned above. A Product Owner should be actively involved in collaborating with stakeholders, users, customers, and Developers throughout a Sprint to maximize value delivery.

Attending every Daily Scrum to answer questions about the Sprint Backlog items: This is not a mandatory responsibility of a Product Owner during a Sprint. The Daily Scrum is an event for the Developers to inspect their progress toward the Sprint Goal and adapt their plan for the next 24 hours. The Daily Scrum is not a status meeting or a reporting session for anyone else. The Product Owner may attend the Daily Scrum as an observer or as an invited participant if they have something valuable to contribute or if they need some clarification from the Developers.

70. Frage

Which statement about the Product Backlog is correct?

- A. The Product Backlog must only contain small, detailed and clearly described items.
- B. The Scrum Master is responsible for managing the Product Backlog.
- C. **The Product Owner is responsible for managing the Product Backlog**

Antwort: C

71. Frage

What are two effective ways for the Scrum Team to make non-functional requirements visible?

(choose the best two answers)

- A. Run the integration and regression tests before the end of the Sprint, and capture the open work for the Sprint Backlog of the next Sprint.
- B. **Add them to the Definition of Done so the work is taken care of every Sprint.**
- C. **Add them to the Product Backlog to ensure transparency.**
- D. Put them on a separate list on the Scrum board, available for all to see.

Antwort: B,C

Begründung:

Non-functional requirements are the criteria that define the quality, performance, security, usability, and other aspects of a product¹. They are often implicit or assumed, but they are important to make visible and explicit, as they affect the value and satisfaction of the product². One effective way to make non-functional requirements visible is to add them to the Product Backlog, which is an ordered list of everything that is known to be needed in the product³[3]. By adding non-functional requirements to the Product Backlog, the Product Owner and the Developers can prioritize, refine, and estimate them, and make them transparent to the stakeholders⁴. Another effective way to make non-functional requirements visible is to add them to the Definition of Done, which is a shared

understanding of what it means for work to be complete, and ensures transparency of the quality of the work done⁵. By adding non-functional requirements to the Definition of Done, the Developers can ensure that every Product Backlog item and Increment meets the expected quality standards, and that the work is taken care of every Sprint.

72. Frage

What three things might a Scrum Product Owner focus on to ensure the product delivers value?

(choose the best three answers)

- A. Velocity is increasing over time.
- B. Minimizing changes to project scope.
- C. Direct customer feedback.
- D. How quickly or easily the product can be absorbed and used by its customers.
- E. How much of the functionality of the product is being used.

Antwort: C,D,E

Begründung:

* The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team. The Product Owner is responsible for managing and refining the Product Backlog, collaborating with the stakeholders and the Developers, and ordering the items in a way that best achieves goals and missions. The Product Owner represents the interests of everyone with a stake in the product and ensures that the Scrum Team works on the right things at the right time.

* To ensure that the product delivers value, a Scrum Product Owner might focus on the following aspects:

* How much of the functionality of the product is being used: This is an indicator of how well the product meets or exceeds the needs and expectations of the customers and users. It can also reveal which features or functions are more or less valuable or useful for them. The Product Owner can use various methods or metrics to measure the usage of the product functionality, such as analytics, user behavior, retention, or engagement.

* Direct customer feedback: This is a source of valuable input and insights from the people who use or benefit from the product. It can also help to validate or invalidate assumptions or hypotheses about the product value and quality. The Product Owner can use various methods or channels to collect and incorporate customer feedback, such as surveys, ratings, reviews, interviews, focus groups, or social media.

* How quickly or easily the product can be absorbed and used by its customers: This is a measure of how well the product delivers value to customers or users in a timely and convenient manner.

It can also affect customer satisfaction and loyalty. The Product Owner can use various methods or metrics to measure the ease of use or adoption of the product, such as time to value, learning curve, usability testing, or net promoter score (NPS).

* The other options are not valid or relevant aspects that a Scrum Product Owner might focus on to ensure that the product delivers value. They are either too narrow, unrealistic, or unrelated to the product value delivery. They are:

* Velocity is increasing over time: This is not a valid aspect that a Scrum Product Owner might focus on to ensure that the product delivers value. Velocity is a measure of how much work a Scrum Team can deliver in a Sprint. It is not a measure of value or quality. It is also not a goal or target for improvement. It is only a planning tool that helps the Scrum Team forecast their future work based on their past performance. Focusing on increasing velocity over time may lead to unrealistic expectations, pressure, or compromise on quality.

* Minimizing changes to project scope: This is not a valid aspect that a Scrum Product Owner might focus on to ensure that the product delivers value. Scrum is an agile framework that embraces change as an opportunity for delivering more value to customers and users. Scrum does not have a fixed project scope, but rather an adaptive Product Backlog that evolves as the product and the market change. The Product Owner should welcome and respond to changes in customer needs and expectations, rather than resist or avoid them.
