

Fire-Inspector-II Sample Questions Answers & New Braindumps Fire-Inspector-II Book

FIRE INSPECTOR II REAL QUESTIONS AND CORRECT ANSWERS LATEST UPDATE GRADED A.

How big are DOT labels? - ANSWER-4 inch square, on point
Where is the primary DOT label? - ANSWER-On the left
How many hazards can be on a DOT label? - ANSWER-several
NFPA 704 - ANSWER-Hazardous Materials Marking System
Placard: Blue means..... - ANSWER-Health Hazard
Placard: Red means.... - ANSWER-Flammability Hazard
Placard: Yellow means.... - ANSWER-Instability
Placard: White means..... - ANSWER-Special Hazards
5 Special Hazards - ANSWER-(1) Combustible Dust Fibers
(2) Spraying/painting dip tanks
(3) Compressed Gasses
(4)Welding and cutting
(5) Hazardous chemicals
Article 15 of NFPA 70 - ANSWER-National Electric Code, Divided into 3 classes
Class I Locations - ANSWER-Flammable gases and vapors exist under normal conditions
Class I Division I Location - ANSWER-Ignitable conditions exist due to repairs or maintenance
Class I Division II Location - ANSWER-Ignitable conditions produced or used but confined to closed containers or systems
Class II Locations - ANSWER-Hazard is due to combustable dust

If you are worried about your Fire-Inspector-II practice test and you have no much time to prepare, now you can completely rest assured it because we will offer you the most updated Fire-Inspector-II dumps pdf with 100% correct answers. You can save your time and money by enjoying one-year free update after purchasing our Fire-Inspector-II Dumps PDF. We also provide the free demo for your reference.

Even though we have already passed many large and small examinations, we are still unconsciously nervous when we face examination papers. Fire-Inspector-II practice quiz provide you with the most realistic test environment, so that you can adapt in advance so that you can easily deal with formal exams. What we say is true, apart from the examination environment, also includes Fire-Inspector-II Exam Questions which will come up exactly in the real exam. And our Fire-Inspector-II study materials always contain the latest exam Q&A.

>> Fire-Inspector-II Sample Questions Answers <<

**New Braindumps Fire-Inspector-II Book - Fire-Inspector-II Valid Exam
Question**

We have always set great store by superior after sale service, since we all tend to take responsibility for our customers who decide to choose our Fire-Inspector-II training materials. We pride ourselves on our industry-leading standards of customer care. Our worldwide after sale staffs will provide the most considerate after-sale service for you in twenty four hours a day, seven days a week, that is to say, no matter you are or whenever it is, as long as you have any question about our Fire-Inspector-II Exam Torrent or about the exam or even about the related certification, you can feel free to contact our after sale service staffs who will always waiting for you on the internet.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

A container in a clean-agent extinguishing system must be refilled or replaced when it shows a loss in original weight of more than five percent, or a loss in original pressure of more than ___ percent.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

A container in a clean-agent extinguishing system must be refilled or replaced if it experiences a loss of more than 5% of its original weight or a loss in original pressure of more than 3%. This requirement ensures the system maintains sufficient agent concentration for fire suppression.

Reference to Fire Inspector Documentation:

1. NFPA 2001 - Standard on Clean Agent Fire Extinguishing Systems (2022 Edition) NFPA 2001, Section 7.3.2.1 states that a container must be refilled or replaced if the weight loss exceeds 5% or the pressure loss exceeds 3% from the original fill pressure. These limits are set to maintain system effectiveness and ensure that a clean-agent system can properly discharge in case of a fire.
2. 2021 International Fire Code (IFC) - Chapter 9 (Fire Protection Systems) IFC 904.10 requires that clean-agent systems be maintained per NFPA 2001 to ensure reliability.

Detailed Explanation of Answer Choices:

Option A (Correct): 3% pressure loss is the correct threshold beyond which a container must be replaced or refilled.

Option B (Incorrect): While 5% is correct for weight loss, it is not the correct value for pressure loss.

Option C (Incorrect): A 10% pressure loss is too high and would compromise system performance before reaching the replacement threshold.

Option D (Incorrect): 12% is well beyond the acceptable loss limit and would pose a significant safety risk.

Thus, the correct and verified answer is: A. 3

NEW QUESTION # 64

Given: A nonsprinklered commercial Type II-B building has a fire flow requirement of 7,000 gpm. If a sprinkler system is installed throughout the building, the new required fire flow is at least ___ gpm. (Assume that the new required fire flow is sufficient to meet the requirements of the sprinkler system.)

- A. 2,000
- B. 1,750
- C. 1,500
- D. 2,250

Answer: C

Explanation:

IFC Section 903.3.5 and Appendix B (Fire-Flow Requirements) allow a reduction in fire flow when sprinklers are installed. For a Type II-B building (noncombustible, unprotected), the base fire flow (7,000 gpm) reflects a large, unsprinklered structure (e.g., per Table B105.1(2)). With full sprinkler protection, IFC B105.2 permits a reduction to as low as 25% of the original flow or the sprinkler demand (whichever is greater), typically 1,500 gpm for commercial buildings per NFPA 13 standards, assuming adequate water supply. Options B, C, and D exceed this minimum without justification. Thus, A is correct.

Reference: IFC 2021, Section 903.3.5, Appendix B, Table B105.1(2).

NEW QUESTION # 65

What is the maximum travel distance to an exit from within a tent?

- A. 100 ft.
- B. Any distance approved by the chief
- C. 75 ft.
- D. 150 ft.

Answer: D

Explanation:

The maximum travel distance to an exit from within a tent is regulated under the 2021 International Fire Code (IFC), Section 3103.12.2 - Means of Egress (Tents and Membrane Structures).

IFC Section 3103.12.2 - Travel Distance:

"The maximum travel distance to an exit shall not exceed 150 feet (45,720 mm)." Why Other Options Are Incorrect?

A: 75 ft. - This limit does not apply to tents; the correct limit is 150 ft.

B: 100 ft. - Too restrictive; the IFC allows up to 150 ft.

D: Any distance approved by the chief. - The fire code does not allow unlimited travel distances; 150 feet is the maximum permitted by code.

NEW QUESTION # 66

Clearance between tops of piles of combustible fibers and sprinkler heads shall not be less than ___ ft.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

Reference to Fire Code Requirements for Clearance Between Combustible Fibers and Sprinklers:

The International Fire Code (IFC 2021), Section 3206.6, states that the minimum clearance between the tops of piles of combustible fibers and sprinkler deflectors shall be no less than 3 feet.

This requirement ensures that the sprinkler system operates efficiently and that water distribution is not obstructed in case of a fire.

Fire Safety Concerns:

Combustible fibers pose a high fire risk due to their flammability and tendency to generate large amounts of heat and smoke.

Adequate clearance prevents heat accumulation near the sprinkler heads, ensuring they activate at the correct temperature.

Clarification of Incorrect Answer Choices:

A: 2 ft. # Incorrect

Too low and could obstruct sprinkler operation, reducing water distribution effectiveness.

C: 4 ft. # Incorrect

Exceeds the required minimum per the IFC 3206.6 standard, though more clearance is beneficial.

D: 5 ft. # Incorrect

More than the code requirement, but the mandatory clearance is 3 feet.

Conclusion:

The correct and verified answer is B (3 feet) based on IFC 3206.6, ensuring proper sprinkler performance and fire safety for combustible fiber storage.

NEW QUESTION # 67

Given: A local college student inquires about the use of candles in their dorm room. Candles:

- A. may not be used.
- B. may be used in a sprinklered dormitory.
- C. must be kept a minimum 12 in. from combustibles.
- D. must be kept a minimum 36 in. from combustibles.

Answer: A

Explanation:

Reference to ICC Fire Code Regulations:

According to the International Fire Code (IFC) Section 308.1.5 (2021 Edition), the use of open-flame devices, including candles, is prohibited in dormitories, sleeping rooms, and similar occupancies unless specifically approved by the fire code official.

The regulation exists to prevent fire hazards in areas with high occupant density and potentially limited egress routes.

Fire Safety Concerns in Dormitories:

Dormitories typically contain highly combustible materials such as bedding, curtains, and furniture, making them susceptible to rapid fire spread.

The presence of multiple residents in a shared living space increases the risk of fire-related casualties.

Even in sprinklered buildings, candles pose an unnecessary ignition risk that could endanger occupants before the activation of fire suppression systems.

Clarification of Incorrect Answer Choices:

B: may be used in a sprinklered dormitory # Incorrect

While fire sprinklers help control fires, they do not prevent ignition, and the prohibition still applies regardless of sprinkler systems.

C: must be kept a minimum of 12 inches from combustibles # Incorrect

This rule applies to general open-flame devices in some circumstances but does not override the outright ban on candles in dormitories.

D: must be kept a minimum of 36 inches from combustibles # Incorrect

Similar to option C, maintaining a distance from combustibles does not exempt candles from being prohibited in dormitory settings.

Conclusion:

The correct and verified answer is A (Candles may not be used) based on the International Fire Code (IFC) Section 308.1.5, ensuring fire safety compliance in dormitory settings.

NEW QUESTION # 68

.....

Only with high quality and valid information of our Fire-Inspector-II exam braindumps, our candidates can successfully pass their exams. At the same time, own to our professional experts constantly improvement on the design of the Fire-Inspector-II study materials, we have developed three versions of layouts: PDF, Software and APP online. Though the content of them are the same, the different layouts provide lots of conveniences out of your imagination. Just have a try and you will love our Fire-Inspector-II Practice Engine.

New Braindumps Fire-Inspector-II Book: https://www.itbraindumps.com/Fire-Inspector-II_exam.html

Our Fire-Inspector-II vce braindumps are the best preparation materials for the certification exam and the guarantee of clearing exam quickly with less effort, And we are always in pursuit of high pass rate of Fire-Inspector-II practice quiz compared with our counterparts to gain more attention from potential customers, If you are determined to enter into International Code Council New Braindumps Fire-Inspector-II Book company or some companies who are the product agents of International Code Council New Braindumps Fire-Inspector-II Book, a good certification will help you obtain more jobs and high positions.

Treat drones with respect, and don't forget Fire-Inspector-II Study Guide Pdf that they can hurt people and damage property if misused, Abstract and concrete descriptions are frequently created during different New Fire-Inspector-II Test Vce Free stages of the service delivery lifecycle by different members of the project team.

Free PDF International Code Council - Fire-Inspector-II - 67 - Fire Inspector II Exam Authoritative Sample Questions Answers

Our Fire-Inspector-II vce braindumps are the best preparation materials for the certification exam and the guarantee of clearing exam quickly with less effort, And we are always in pursuit of high pass rate of Fire-Inspector-II practice quiz compared with our counterparts to gain more attention from potential customers.

If you are determined to enter into International Code Council company or some Fire-Inspector-II companies who are the product agents of International Code Council, a good certification will help you obtain more jobs and high positions.

You need to understand these updated Fire-Inspector-II exam topics or any changes in the syllabus, We made the Fire-Inspector-II exams, and now we're here to help you to get the most out of them.
