Palo Alto Networks XSIAM-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	• Threat Intelligence Management and ASM: This section of the exam measures the skills of Threat Intelligence Analysts and focuses on handling and analyzing threat indicators and attack surface management (ASM). It includes importing and managing indicators, validating reputations and verdicts, creating prevention and detection rules, and monitoring asset inventories. Candidates are expected to use the Attack Surface Threat Response Center to identify and remediate threats effectively.
Topic 2	• Alerting and Detection Processes: This section of the exam measures the skills of Security Analysts and focuses on recognizing and managing different types of analytic alerts in the Palo Alto Networks XSIAM platform. It includes alert prioritization, scoring, and incident domain handling. Candidates must demonstrate understanding of configuring custom prioritizations, identifying alert sources like correlations and XDR indicators, and taking corresponding actions to ensure accurate threat detection.
Topic 3	• Automation and Playbooks: This section of the exam measures the skills of SOAR Engineers and focuses on leveraging automation within XSIAM. It includes using playbooks for automated incident response, identifying playbook components like tasks, sub-playbooks, and error handling, and understanding the purpose of the playground environment for testing and debugging automated workflows.
Topic 4	• Incident Handling and Response: This section of the exam measures the skills of Incident Response Analysts and covers managing the complete lifecycle of incidents. It involves explaining the incident creation process, reviewing and investigating evidence through forensics and identity threat detection, analyzing and responding to security events, and applying automated responses. The section also focuses on interpreting incident context data, differentiating between alert grouping and data stitching, and hunting for potential IOCs.

Palo Alto Networks XSIAM Analyst Sample Questions (Q110-Q115):

NEW QUESTION # 110
You're investigating a compromised device and want to perform remote forensics. Which live terminal options would be effective?
(Choose two)
Response:

- A. Enable USB ports
- B. Run endpoint file retrieval
- C. Retrieve registry hives
- D. Deactivate local firewall

Answer: B,C

NEW QUESTION # 111
An alert triggered by a correlation rule includes BIOC evidence and an IOC match. What can be inferred?
(Choose two)
Response:

- A. IOC-based alerts cannot be used in correlation
- B. The alert was triggered by external threat feeds only
- C. The alert contains evidence from multiple detection sources
- D. Correlation rules can aggregate different alert types

Answer: C,D

NEW QUESTION # 112
Based on the image below, which two additional steps should a SOC analyst take to secure the endpoint?
(Choose two.)

- A. Reboot the machine.
- B. Live Terminal into the workstation to verify.
- C. Isolate the affected workstation.
- D. Block 192.168.1.199.

Answer: C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The correct answers areC - Block 192.168.1.199andD - Isolate the affected workstation.
* Block 192.168.1.199:The image shows that the suspicious or malicious activity originated from this source IP address, making it a potential threat actor or compromised system on the network. Blocking this IP helps prevent further communication or lateral movement from the suspected attacker.
* Isolate the affected workstation:Since suspicious activities (like powershell_ise.exe running as an admin and launching splunkd.exe) are detected, isolating the workstation is a critical containment measure. This action disconnects the endpoint from the network, stopping any ongoing attack, lateral movement, or command-and-control activity, while allowing for forensic investigation.
"Isolating an endpoint and blocking the source IP address are best practices for immediate containment in the event of detected

compromise or suspicious activity." Document Reference:XSIAM Analyst ILT Lab Guide.pdf Page:Page 40 (Incident Handling section)
