The EXIN CDCP PDF dumps file is the most convenient way to prepare for the examination. This document is a collection of most probable and realistic Certified Data Centre Professional (CDCP) CDCP dumps. With this PDF file, you have Certified Data Centre Professional (CDCP) CDCP questions that will appear in the real exam. You can immediately download our CDCP PDF Questions from the PDFVCE website after payment. Without place and time limits, you can use the PDF format of Certified Data Centre Professional (CDCP) CDCP real exam questions via smartphones, tablets, and laptops.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 2	<ul style="list-style-type: none">• Water Supply: This topic is all about water supply techniques and application areas.
Topic 3	<ul style="list-style-type: none">• Raised Floor• Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.

Topic 4	<ul style="list-style-type: none"> Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.
Topic 5	<ul style="list-style-type: none"> Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 6	<ul style="list-style-type: none"> Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 7	<ul style="list-style-type: none"> Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.
Topic 8	<ul style="list-style-type: none"> Fire Safety Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 9	<ul style="list-style-type: none"> Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).

EXIN CDCP Exam | CDCP Valid Exam Braindumps - Ensure you Pass CDCP: Certified Data Centre Professional (CDCP) Exam

As we all know, the CDCP certificate has a very high reputation in the global market and has a great influence. But how to get the certificate has become a headache for many people. Our CDCP learning materials provide you with an opportunity. Once you choose our CDCP exam practice, we will do our best to provide you with a full range of thoughtful services. Our products are designed from the customer's perspective, and experts that we employed will update our CDCP Learning Materials according to changing trends to ensure the high quality of the CDCP study material.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q42-Q47):

NEW QUESTION # 42

Escape route signage should be placed where?

- A. At every door providing a pathway
- B. At every door including riser doors, doors of storage closets etc.
- C. Only at the main entrance of the data centre building
- D. Only at emergency escape doors

Answer: A

Explanation:

Escape route signage should be placed at every door providing a pathway to the exit or the assembly area, according to the CDCP Preparation Guide¹ and the EU Safety/Health Signs Directive². Escape route signage is used to guide the occupants of the data centre from wherever they are in the building, via a place of relative safety (the escape route), to the place of ultimate safety (the assembly area). Escape route signage should not be limited to only emergency escape doors or the main entrance of the data centre building, as these may not be accessible or visible from all locations. Escape route signage should also not include doors that do not lead to the exit or the assembly area, such as riser doors, doors of storage closets, or doors of other rooms, as these may confuse or mislead the occupants. Escape route signage should be placed at every door that provides a pathway to the exit or the assembly area, and should indicate the direction and distance of the escape route using pictograms, arrows, and words. Escape route signage should also be designed and installed in accordance with the relevant standards and codes, such as BS 5499 and ISO 7010.

NEW QUESTION # 43

is the ability of a system or component to perform its required functions under stated conditions for a specified period of time.

- A. Availability
- B. Scalability
- C. Agility
- **D. Reliability**

Answer: D

Explanation:

According to the IEEE definition, reliability is the ability of a system or component to perform its required functions under stated conditions for a specified period of time. Reliability is a measure of how often a system or component fails, and how long it takes to recover from a failure. Reliability is closely related to availability, which is the degree to which a system or component is operational and accessible when required for use.

Reliability and availability are both affected by factors such as design, maintenance, testing, and environmental conditions.

NEW QUESTION # 44

Which Class of Fires involves ordinary combustible materials such as paper, wood and cloth?

- **A. Class A**
- B. Class D
- C. Class B
- D. Class K

Answer: A

Explanation:

According to the CDCP® Preparation Guide, Class A fires involve ordinary combustible materials such as paper, wood and cloth. These materials leave behind ash or embers when they burn. Class A fires can be extinguished by water or other cooling agents that reduce the temperature of the fuel below its ignition point.

NEW QUESTION # 45

is the degree to which a system or component is operational and accessibility when required for use.

- A. Scalability
- B. Agility
- C. Reliability
- **D. Availability**

Answer: D

Explanation:

Availability is the degree to which a system, product or component is operational and accessible when required for use. It is one of the attributes of reliability, which is the ability of a system or component to perform its required functions under stated conditions for a specified period of time. Availability can be calculated as the ratio of the expected value of the uptime (the time when the system is functional) to the total time (uptime plus downtime) of a system or component. Availability can also be influenced by factors such as maintainability, fault tolerance, redundancy, diagnostics, and logistics.

NEW QUESTION # 46

When having two non-synchronized power sources, the ATS / STS need to be of the type:

- A. Make before break.
- B. Both make before break or break before make can be used.

- C. Break before make.
- D. Both an ATS and STS can never handle two non-synchronized sources.

Answer: C

Explanation:

When having two non-synchronized power sources, the ATS / STS need to be of the type break before make, which means that the switch disconnects from one source before connecting to the other source. This prevents any short circuit, back feed, or phase mismatch that could occur if the two sources were connected simultaneously. Break before make switches are also known as open transition switches, because they create a brief interruption in the power supply during the switching process. This interruption is usually acceptable for most ICT equipment, as they have internal power supplies or batteries that can handle the transient. However, if the interruption is not acceptable, then the two power sources need to be synchronized before switching, which requires a make before break switch, also known as a closed transition switch. Make before break switches connect to the second source before disconnecting from the first source, which ensures a seamless transfer of power without any interruption. However, make before break switches require that the two sources have the same voltage, frequency, and phase, which can be achieved by using a synchronization module or a phase-locked loop.
