## Huawei HCIP-Security V4.0 Sample Questions (Q44-Q49):

### NEW QUESTION # 44

In the figure, FW\_A connects to FW\_B through two links working in active/standby mode. When the active link of FW\_A is faulty, the old IPsec tunnel 1 needs to be torn down, and IPsec tunnel 2 needs to be established with FW\_B through the standby link to route traffic. In this case, configuring the IKE \_\_\_\_\_ detection mechanism on FW\_A helps detect link faults and tear down the IPsec tunnel.(Enter lowercase letters.)

**Answer:**

Explanation:

dpd

Explanation:

- \* What is IKE DPD (Dead Peer Detection)?
  - \* IKE DPD (Dead Peer Detection) is a mechanism used in IPsec VPNs to check if a remote VPN peer is still reachable.
  - \* It allows the firewall to detect link failures and automatically tear down and re-establish IPsec tunnels when necessary.
  - \* Why is DPD required in this scenario?
  - \* The network uses an active/standby link setup:
  - \* IPsec Tunnel 1 (Active) # Uses Link 1 (GE0/0/1).
  - \* IPsec Tunnel 2 (Standby) # Uses Link 2 (GE0/0/2).
  - \* If Link 1 fails, the firewall must detect the failure and tear down IPsec Tunnel 1 before establishing IPsec Tunnel 2 over Link 2.
  - \* DPD detects unreachable peers and triggers a failover.
  - \* How does IKE DPD work?
  - \* DPD periodically sends probes (HELLO messages) to the remote VPN peer.
  - \* If no response is received within a timeout period, the firewall assumes the peer is down.
  - \* The firewall deletes the IPsec tunnel and switches to the backup link.
  - \* Why is the answer "dpd" (lowercase)?
  - \* The question explicitly asks for lowercase letters.
  - \* "dpd" (Dead Peer Detection) is the correct technical term in Huawei firewalls and networking standards.
