## 100-160 Official Cert Guide | 100-160 Valid Test Testking

There are so many benefits when you get qualified by the 100-160 certification. Expand your knowledge and your potential earning power to command a higher salary by earning the 100-160 best study material. Now, let's prepare for the exam test with the 100-160 training pdf offered by ActualTestsIT. 100-160 Online Test engine is selected by many candidates because of its intelligence and interactive features. You can use the 100-160 online test off-line, while you should run it in the network environment.

## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q56-Q61):

### NEW QUESTION # 56

What is the purpose of a Virtual Private Network (VPN) in cybersecurity?

- A. To monitor network traffic for potential security threats
- **B. To encrypt traffic between two networks**
- C. To authenticate users before granting them access
- D. To filter network traffic based on predefined rules

**Answer: B**

Explanation:

A Virtual Private Network (VPN) is a secure connection established over a public network, such as the internet. Its primary purpose is to encrypt traffic between two networks or between an individual user and a network. By using encryption protocols, VPNs ensure that data transmitted over the network remains confidential and secure, protecting it from unauthorized access or interception.

### NEW QUESTION # 57

A restaurant installs a second wireless router that only employees can use. Which statement describes how to securely configure the new router?

- A. Configure the SSID with broadcast disabled.
- B. Configure a higher signal strength to allow coverage in the parking lot.
- C. Configure the SSID with the same SSID used by the customer router.
- D. Configure the new router to filter IP addresses.

**Answer: A**

Explanation:

The CCST Cybersecurity Study Guide explains that disabling SSID broadcast hides the network from casual scanning, adding a layer of obscurity. While not a complete security measure, when combined with WPA2/WPA3 encryption and strong passwords, it can help protect private wireless networks, especially in environments with separate employee and guest access.

"Disabling SSID broadcast can reduce the visibility of a wireless network, making it less likely to be detected by casual attackers. This should be combined with strong encryption and authentication." (CCST Cybersecurity, Basic Network Security Concepts, Wireless Security section, Cisco Networking Academy) A (IP filtering) provides limited protection and is harder to manage for employee devices.

B is correct: Disabling SSID broadcast adds an extra layer of obscurity for the employee network.

C would make the network easier to access from outside the premises, which is less secure.

D would cause network conflicts and make segmentation impossible.

### NEW QUESTION # 58

Which of the following log file entries would most likely indicate a successful brute-force attack on an authentication system?

- A. "Failed login attempt from user 'bob' at 11:23:45 due to incorrect password."
- B. "Multiple failed login attempts from IP address 192.168.1.100 within a short time."
- C. "Successful login attempt from user 'admin' at 10:15:32."
- D. "Password reset request from user 'jane' received and processed."

**Answer: B**

Explanation:

A brute-force attack involves continuously and systematically attempting various combinations of passwords until the correct one is found. Thus, multiple failed login attempts from a specific IP address within a short time frame is a strong indication of a brute-force attack. This log entry suggests that an attacker is repeatedly attempting to gain unauthorized access to the system by systematically cycling through different passwords.

### NEW QUESTION # 59

Which of the following is an example of a web application vulnerability that can be exploited by an attacker?

- A. Cross-site scripting (XSS)
- B. Buffer overflow
- C. Disk fragmentation
- D. Network latency

**Answer: A**

Explanation:

Cross-site scripting (XSS) is a web application vulnerability where an attacker injects malicious code into a trusted website, which then executes on the victim's browser. This vulnerability can allow attackers to steal sensitive information, perform phishing attacks, or deliver malware. Disk fragmentation, network latency, and buffer overflow are not examples of web application vulnerabilities; they refer to other aspects of computing performance and security.

### NEW QUESTION # 60

Which of the following is a common proactive measure for managing vulnerabilities?

- A. Regularly updating antivirus signatures
- B. Implementing data encryption
- C. Conducting vulnerability assessments
- D. Performing regular system backups

**Answer: C**

Explanation:

Conducting vulnerability assessments is a proactive measure for managing vulnerabilities. It involves regularly scanning the system or network for vulnerabilities, identifying weaknesses, and prioritizing remediation efforts. By proactively assessing and identifying vulnerabilities, organizations can take necessary actions to mitigate risks and prevent potential exploitation.

## NEW QUESTION # 61

.....

As we all know, the influence of 100-160 exam guides even have been extended to all professions and trades in recent years. Passing the 100-160 exam is not only for obtaining a paper certification, but also for a proof of your ability. Most people regard Cisco certification as a threshold in this industry, therefore, for your convenience, we are fully equipped with a professional team with specialized experts to study and design the most applicable 100-160 Exam prepare. We have organized a team to research and study question patterns pointing towards various learners.
