Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

For which two modules on FortiSOAR can you create SLA templates? (Choose two.)

- A. Alerts
- B. Indicators
- C. Tasks
- D. Incidents

Answer: A,B

Explanation:

In FortiSOAR, SLA (Service Level Agreement) templates can be created for specific modules, including Alerts and Indicators. These templates are essential for tracking response and resolution times, ensuring compliance with defined service levels. By configuring SLAs on the Alerts and Indicators modules, organizations can monitor the time taken to address these items, which is critical in maintaining efficient incident response and management practices. The SLA templates can be customized according to specific business requirements and are applied to records within these modules to enforce timely actions.

NEW QUESTION # 42

Which two statements about Elasticsearch are true? (Choose two.)

- A. Elasticsearch allows you to store, search, and analyze huge volumes of data quickly. In near real time, and return answers in milliseconds.
- B. The minimum version of the Elasticsearch cluster must be 6.0.2. if you want to externalize the Elasticsearch data.
- C. The global search mechanism in FortiSOAR leverages an Elasticsearch database to achieve rapid, efficient searches across the entire record system.
- D. To change the location of your Elasticsearch instance from the local instance to a remote location, you must update the falcon.conf file.

Answer: A,C

Explanation:

Elasticsearch in FortiSOAR is used for its robust data handling capabilities, allowing rapid storage, searching, and analysis of vast amounts of data in near real-time. Its integration with FortiSOAR's global search enables efficient querying across all records, providing quick response times and a seamless user experience. The Elasticsearch database is crucial for handling extensive datasets and delivering swift search results, making it integral to FortiSOAR's performance and data management capabilities.

NEW QUESTION # 43

An administrator is issuing the following command on a node trying to join a FortiSOAR duster as a standby:

```
csadm ha join-cluster --status active -role secondary --primary-node 10.0.1.160
```

The node fails to join the cluster. What is the

issue?

- A. The role value should be worker.
- **B. The status value should be passive.**
- C. The primary node needs to be resolvable via FQDN.
- D. The IP address should be for secondary-node Instead of primary-node.

Answer: B

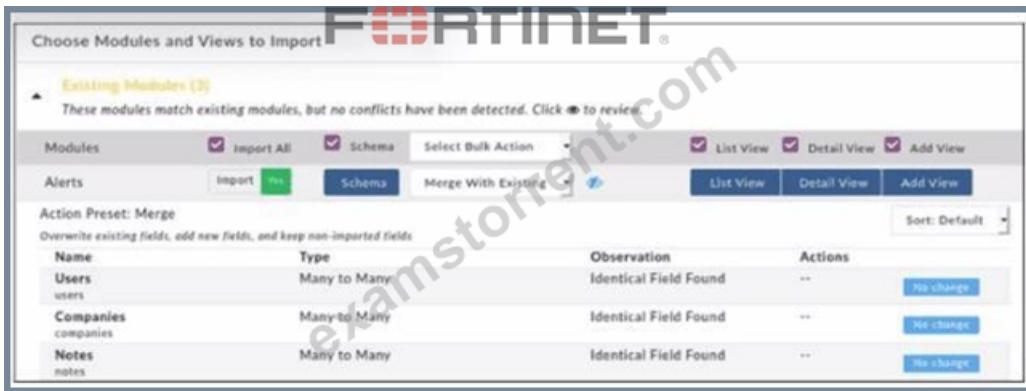

Explanation:

When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup.

In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

NEW QUESTION # 44

Refer to the exhibit.

When importing modules to FortiSOAR using the configuration wizard, what actions are applied to fields if you select Merge with Existing as the Bulk action?

- A. Existing fields are kept, new fields are added, and non-imported fields are kept.
- **B. Existing fields are overwritten, new fields are added, and non-Imported fields are kept.**
- C. Existing fields are kept, new fields are added, and non-imported fields are deleted.
- D. Existing Holds are overwritten, now fields are added, and non-imported fields are deleted.

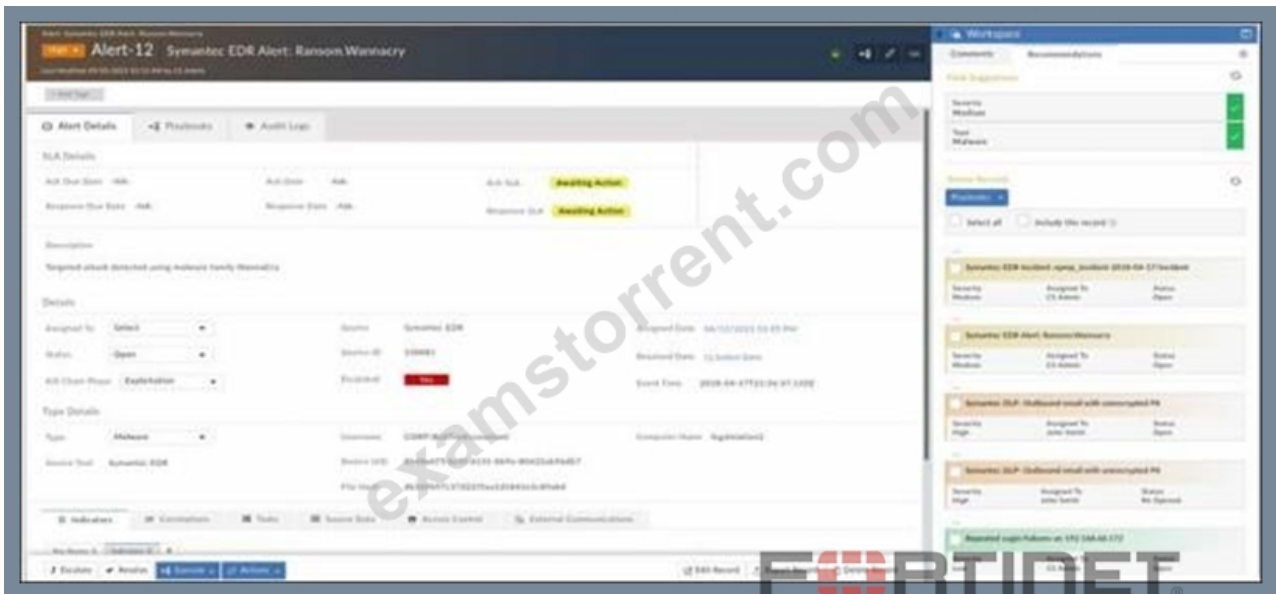

Answer: B

Explanation:

When importing modules into FortiSOAR using the configuration wizard and selecting "Merge with Existing" as the bulk action, the behavior for field handling is as follows: any fields that already exist in the system are overwritten with the imported values. New fields from the imported module are added to the system, while fields that are not part of the imported module remain unaffected and are retained in the system. This option ensures that existing data structures are updated with new information without losing existing, but non- imported, fields.

NEW QUESTION # 45

Refer to the exhibit.

View the exhibit. The dataset on FortiSOAR has been trained to predict which record field?

- A. Severity
- B. Assigned To
- C. Playbooks
- D. Status

Answer: A
