1 / 3

참고: PassTIP에서 Google Drive로 공유하는 무료 2026 SAP C-IBP-2502 시험 문제집이 있습니다:  
<https://drive.google.com/open?id=1xKXgnKYsxdCzhiARJ4gSf5YGuwlJQAH>

PassTIP에서 제공해드리는 SAP C-IBP-2502덤프는 아주 우수한 IT인증덤프자료 사이트입니다. IT업계엘리트한 강사들이 퍼펙트한 SAP C-IBP-2502 덤프문제집을 제작하여 디테일한 시험문제와 답으로 여러분이 아주 간단히 SAP C-IBP-2502시험을 패스할 수 있도록 최선을 다하고 있습니다.

## SAP C-IBP-2502 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"><li>Key Figures &amp; Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.</li></ul>
주제 2	<ul style="list-style-type: none"><li>User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.</li></ul>

주제 3	<ul style="list-style-type: none"> <li>Analytics and Reporting: this section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.</li> </ul>
주제 5	<ul style="list-style-type: none"> <li>Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.</li> </ul>
주제 6	<ul style="list-style-type: none"> <li>Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.</li> </ul>

## 최신 C-IBP-2502시험대비 공부하기 인증덤프데모문제

요즘같이 시간인즉 금이라는 시대에, 우리 PassTIP선택으로 SAP C-IBP-2502인증시험응시는 아주 좋은 딜입니다. 우리는 100%시험패스를 보장하고 또 일년무료 업데이트서비스를 제공합니다. 그리고 시험에서 떨어지셨다고 하시면 우리는 덤프비용전액 환불을 약속 드립니다.

## 최신 SAP Certified Application Associate C-IBP-2502 무료샘플문제 (Q24-Q29):

### 질문 # 24

You create a planning filter using an SAP IBP Fiori app. Which of the following objects can it be applied to?

Note: There are 2 correct answers to this question.

- A. Supply chain graph in Supply Chain Network app
- B. Compare function in the Planning Areas app
- C. Planning view templates in the SAP IBP, add-in for Microsoft Excel
- D. Jobs in the Application Jobs app

정답: C,D

### 설명:

Planning filters in SAP IBP, created via the Manage Planning Filters app (Fiori-based), define subsets of data (e.g., by Product, Location) for use across various applications. Their applicability depends on SAP IBP's functional scope.

\* Option A: Planning view templates in the SAP IBP, add-in for Microsoft ExcelThis is correct.

Planning filters can be applied to planning view templates in the Excel add-in to restrict data displayed or edited (e.g., show only products in Region X). This is a core feature for planners, as per SAP IBP's Excel integration documentation.

\* Option B: Jobs in the Application Jobs appThis is correct. Planning filters can be parameters in application jobs (e.g., Copy Operator, Purge Data) to limit the scope of data processed (e.g., purge data for specific Locations). This is a standard capability in the Application Jobs app, per SAP IBP's job management guides.

\* Option C: Compare function in the Planning Areas appThis is incorrect. The Planning Areas app manages planning area configurations, and while it has a "Compare" function to analyze differences, planning filters are not applied here. Filters are for runtime data, not configuration comparison.

\* Option D: Supply chain graph in Supply Chain Network appThis is incorrect. The Supply Chain Network app visualizes the network (e.g., Locations, Transportation Lanes), but planning filters are not directly applied to this graph. Filters affect data views, not network visualizations.

Thus, A and B are the correct objects where planning filters can be applied, per SAP IBP's official functionality.

### 질문 # 25

Which Maintenance, Repair, and Overhaul (MRO) parts planning processes are included in SAP Integrated Business Planning for Supply Chain? Note: There are 3 correct answers to this question.

- A. SAP Intelligent Asset Management
- B. Demand Driven Replenishment
- C. Demand Planning
- D. Supply Planning
- E. Inventory Optimization

정답: C,D,E

#### 설명:

MRO parts planning in SAP IBP supports maintenance operations with demand, supply, and inventory processes, per SAP IBP's supply chain planning scope.

- \* Option A: Inventory OptimizationThis is correct. Inventory Optimization (e.g., safety stock for MRO parts) ensures availability for maintenance, a key MRO process, per SAP IBP's documentation.
- \* Option B: Demand Driven ReplenishmentThis is incorrect. Demand Driven Replenishment (DDR) is a specific methodology in SAP IBP, but it's not standard for MRO; it's more for manufacturing/retail.
- \* Option C: Demand PlanningThis is correct. Demand Planning forecasts MRO parts needs (e.g., based on maintenance schedules), a core process, per SAP IBP's demand module.
- \* Option D: Supply PlanningThis is correct. Supply Planning ensures MRO parts are sourced and available, using heuristics or optimization, per SAP IBP's supply planning features.
- \* Option E: SAP Intelligent Asset ManagementThis is incorrect. SAP IAM is a separate solution, not an IBP process, though it can integrate with IBP for MRO planning.

Thus, A, C, and D are MRO processes in SAP IBP, per official documentation.

### 질문 # 26

Which sourcing methods are required to identify the product flow through the network? Note: There are 3 correct answers to this question.

- A. Unspecified Sourcing
- B. Customer Sourcing Rule
- C. Sourcing via Production
- D. Sourcing via Demand Prioritization
- E. Sourcing via Costs

정답: B,C,E

#### 설명:

Sourcing methods in SAP IBP define how products flow through the supply chain network, configured via master data (e.g., Production Source, Transportation Lane).

- \* Option A: Sourcing via ProductionThis is correct. Production sourcing (via Production Source of Supply) defines product flow from manufacturing locations, a core method, per SAP IBP's supply planning documentation.
- \* Option B: Sourcing via Demand PrioritizationThis is incorrect. Demand prioritization affects allocation, not the physical flow definition.
- \* Option C: Unspecified SourcingThis is incorrect. "Unspecified Sourcing" is not a standard method; sourcing must be explicitly defined.
- \* Option D: Customer Sourcing RuleThis is correct. Customer sourcing rules (via SOURCECUSTOMER) specify which locations supply customers, defining flow, per SAP IBP's network setup.
- \* Option E: Sourcing via CostsThis is correct. Cost-based sourcing (e.g., via Transportation Lane costs) determines optimal flow in optimization, per SAP IBP's optimizer documentation.

Thus, A, D, and E identify product flow, per SAP IBP's official sourcing methods. (Note: Original had C typo; corrected to D.)

### 질문 # 27

Which of the following solutions should be satisfied with violations penalized by the objective function of the time-series supply optimizer? Note: There are 3 correct answers to this question.

- A. Not fully satisfied demands
- B. Violation of minimum resource utilization
- C. Violation of minimum aggregated inventory values
- D. Not respecting production capacity

정답: A,B,C

설명:

The Time-Series Supply Optimizer in SAP IBP minimizes an objective function (cost-based), penalizing violations of soft constraints, while hard constraints must be fully satisfied, per SAP IBP's optimization documentation.

\* Option A: Violation of minimum resource utilization This is correct. Minimum resource utilization (e.g., machine usage) is a soft constraint; violations incur penalties (e.g., underutilization costs), influencing the objective function.

\* Option B: Not respecting production capacity This is incorrect. Production capacity is a hard constraint in the optimizer; it cannot be violated, only respected, unlike soft constraints with penalties.

\* Option C: Not fully satisfied demands This is correct. Unsatisfied demand (non-delivery) is a soft constraint, penalized via high non-delivery costs in the objective function, a core optimizer feature.

\* Option D: Violation of minimum aggregated inventory values This is correct. Minimum inventory levels (e.g., safety stock) are soft constraints; violations are penalized (e.g., stockout costs), affecting the objective function.

Thus, A, C, and D are penalized solutions, per SAP IBP's optimizer behavior.

질문 # 28

What function would you use to configure a year-to-date calculation?

- A. Rolling Aggregation
- B. Cumulative Aggregation
- C. Last Period Aggregation
- D. Dynamic Rolling Aggregation

정답: B

설명:

A year-to-date (YTD) calculation in SAP IBP sums values from the start of the year to the current period, a common time-series requirement.

\* Option A: Rolling Aggregation This is incorrect. Rolling aggregation typically refers to a moving window (e.g., last 3 months), not a fixed YTD scope.

\* Option B: Last Period Aggregation This is incorrect. Last period aggregation focuses on the most recent period, not a cumulative YTD total.

\* Option C: Cumulative Aggregation This is correct. The CUMULATE function in SAP IBP (e.g., KF2 = CUMULATE(KF1)) calculates a running total from the start of the horizon (e.g., year) to each period, ideal for YTD, per SAP IBP's calculation documentation.

\* Option D: Dynamic Rolling Aggregation This is incorrect. Dynamic rolling implies a flexible window, not a fixed YTD accumulation. Thus, C is the correct function for a YTD calculation, per SAP IBP's official capabilities.

질문 # 29

.....

SAP C-IBP-2502 인증시험은 최근 가장 핫한 시험입니다. 인기가 높은 만큼 SAP C-IBP-2502 시험을 패스하여 취득하게 되는 자격증의 가치가 높습니다. 이렇게 좋은 자격증을 취득하는데 있어서의 필수과목인 SAP C-IBP-2502 시험을 어떻게 하면 한번에 패스할 수 있을까요? 그 비결은 바로 PassTIP의 SAP C-IBP-2502 덤프를 주문하여 가장 빠른 시일내에 덤프를 마스터하여 시험을 패스하는 것입니다.
