

# Are you ready to prove your technical knowledge and expertise with the Citrix 1Y0-204 certification exam?

DOWNLOAD the newest Actualtests4sure 1Y0-204 PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1\\_rYUPjJJTqsuW0l24Hyy08dwsoe3oU1](https://drive.google.com/open?id=1_rYUPjJJTqsuW0l24Hyy08dwsoe3oU1)

Whether you are at home or out of home, you can study our 1Y0-204 test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our 1Y0-204 study tool, you only need about 20 to 30 hours to prepare for the exam. You can use our 1Y0-204 exam materials to study independently. Then our system will give you an assessment based on your actions. You can understand your weaknesses and exercise key contents. You don't need to spend much time on it every day and will pass the exam and eventually get your certificate. 1Y0-204 Certification can be an important tag for your job interview and you will have more competitiveness advantages than others.

## What is the duration of the Citrix Virtual Apps and Desktops 7 Administration | 1Y0-204

- Passing score: 61%
- Number of Questions: 64
- Length of Examination: 90 minutes
- Format: Multiple choices, multiple answers

Citrix 1Y0-204 Exam is a valuable certification for professionals who want to demonstrate their expertise in managing Citrix Virtual Apps and Desktops 7 environments. Citrix Virtual Apps and Desktops 7 Administration certification can help individuals advance their careers and improve their job prospects in the field of virtualization and cloud computing. With proper preparation and study, candidates can pass the exam and become certified in Citrix Virtual Apps and Desktops 7 Administration.

## 100% Citrix 1Y0-204 Exam Coverage & 1Y0-204 Accurate Answers

You don't have to install excessive plugins or software to attempt this Citrix 1Y0-204 practice test. This version of 1Y0-204 practice exam is supported by these operating systems: Windows, Mac, iOS, Linux, and Android. It is a customizable Citrix 1Y0-204 Practice Exam. It means takers can change its duration and 1Y0-204 practice test question numbers. The actual Citrix 1Y0-204 exam environment that the practice exam creates is beneficial to counter Citrix Virtual Apps and Desktops 7 Administration (1Y0-204) exam anxiety.

Becoming a Citrix Certified Associate – Virtualization (CCA-V) by passing the Citrix 1Y0-204 Certification Exam can help IT professionals advance their career in virtualization and cloud computing. Citrix Virtual Apps and Desktops 7 Administration certification demonstrates that the candidate has the skills and knowledge required to manage Citrix Virtual Apps and Desktops 7 environments effectively.

## Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q128-

## Q133):

### NEW QUESTION # 128

A Citrix Administrator needs to block all the DNS requests from subnet 10.107.149.0/24.

Which expression can the administrator use to match the required traffic?

- A. CLIENT.IP.SRC(10.107.149.0) && (client.UDP.DSTPORT.EQ(53) || client.TCP.DSTPORT.EQ(53))
- B. CLIENT.IP.SRC.IN\_SUBNET(10.107.149.0/24)&& client.UDP.DSTPORT.EQ(53) || client.TCP.DSTPORT.EQ(53)
- C. CLIENT.IP.SRC.IN\_SUBNET(10.107.149.0/24)&& (client.UDP.DSTPORT.EQ(53) || client.TCP.DSTPORT.EQ(53))
- D. CLIENT.IP.SRC(10.107.149.0) && client.UDP.DSTPORT.EQ(53) || client.TCP.DSTPORT.EQ(53)

**Answer: C**

Explanation:

The expression B matches the required traffic because it uses the IN\_SUBNET function to check if the source IP address belongs to the subnet 10.107.149.0/24, and it uses parentheses to group the logical OR condition for the destination port being either UDP or TCP 53. The other expressions are either syntactically incorrect or do not match the subnet correctly. See Policy Expressions and Classic Expressions for more information.

### NEW QUESTION # 129

Scenario: A Citrix Administrator has configured an HTTP load-balancing virtual server with Least Response Time as the load-balancing algorithm.

The administrator notices that requests to the virtual server appear to be using the Round Robin load-balancing algorithm.

What could be causing the virtual server to use the Round Robin load-balancing algorithm?

- A. Least Response Time CANNOT be used as a load-balancing algorithm on an HTTP virtual server.
- B. The Citrix ADC configuration has NOT been saved yet.
- C. The services that are bound to the HTTP virtual server are using the PING monitor.
- D. The virtual server is in startup round robin mode.

**Answer: D**

Explanation:

According to the Citrix documentation<sup>1</sup>, the Least Response Time method uses the response time of the monitor probes to determine the best service. However, this method requires that a monitor is bound to each service and that the monitor response times are recorded. Therefore, the virtual server uses the Round Robin method until each bound service has been probed by the monitor at least once. This mode is called startup round robin mode<sup>2</sup>.

### NEW QUESTION # 130

A Citrix Administrator needs to block access to multiple URLs for security reasons.

Which configuration should the administrator use to accomplish this requirement?

A

```
add policy patset BAD_URL
bind policy patset BAD_URL badurl1.mylab.lab -index 11 -charset ASCII
bind policy patset BAD_URL badurl2.mylab.lab -index 10 -charset ASCII
add responder policy BAD_URL_DNS "DNS.REQ.QUESTION.DOMAIN.CONTAINS("BAD_URL")" RESET
bind responder global BAD_URL_DNS 100 END -type DNS_REQ_OVERRIDE
```

B

```
add policy patset BAD_URL
bind policy patset BAD_URL badurl1.mylab.lab -index 11 -charset ASCII
bind policy patset BAD_URL badurl2.mylab.lab -index 10 -charset ASCII
add responder policy BAD_URL_DNS "DNS.REQ.QUESTION.DOMAIN.CONTAINS("BAD_URL")" DROP
bind responder global BAD_URL_DNS 100 END -type DNS_REQ_OVERRIDE
```

C

```
bind policy patset BAD_URL badurl1.mylab.lab -index 11 -charset ASCII
bind policy patset BAD_URL badurl2.mylab.lab -index 10 -charset ASCII
add responder policy BAD_URL_DNS "DNS.REQ.QUESTION.DOMAIN.CONTAINS("BAD_URL")" RESET
bind responder global BAD_URL_DNS 100 END -type DNS_REQ
```

D

```
add policy patset BAD_URL
bind policy patset BAD_URL badurl1.mylab.lab -index 11 -charset ASCII
bind policy patset BAD_URL badurl2.mylab.lab -index 10 -charset ASCII
add responder policy BAD_URL_DNS "DNS.REQ.QUESTION.DOMAIN.CONTAINS_ANY("BAD_URL")" RESET
bind responder global BAD_URL_DNS 100 END -type DNS_REQ_OVERRIDE
```

- A. Option B
- B. Option C
- C. Option A
- D. Option D

**Answer: A**

Explanation:

Option B is the correct answer because it uses the DROP action to block access to the URLs that match the BAD\_URL pattern set. The other options use the RESET action, which only resets the connection but does not prevent access. Also, option C has a typo in the bind responder global command, which would cause an error. Option D has an invalid type argument for the bind responder global command, which should be DNS\_REQ\_OVERRIDE instead of DNS\_REQ. For more information, see the following resources:

### NEW QUESTION # 131

Scenario: While using Citrix Studio to create a new Delivery Group, a Citrix Administrator does NOT see any machine catalogs listed, but does see an error message. The administrator successfully verified the presence of machine catalogs in the Machine Catalogs node of Citrix Studio.

Which issue can cause this to happen?

- A. The Virtual Delivery Agent (VDA) version is lower than 7.15 LTSR.
- B. The administrator has insufficient permissions to create the Delivery Group.
- C. No machine catalog machines have been started.
- D. There are no unassigned machine catalog machines.

**Answer: D**

Explanation

<https://support.citrix.com/article/CTX239687/vda-registration-fails-when-a-vda-versions-functional-level-is-lower>

### NEW QUESTION # 132

Scenario: A Citrix Administrator needs to deploy Citrix Virtual Apps Project requirements dictate that management and maintenance should be minimized for the administrator, while still maintaining control of the Virtual Delivery Agent (VDA) machines.

Which hosting platform should the administrator choose to meet these requirements?

- A. On-premises
- **B. Citrix Cloud**
- C. Public Cloud-hosted
- D. Service provider

**Answer: B**
