EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

Question:

An IT team needs to connect a compute system to a switch in their SAN. What is the port type?

- A. E_port
- **B. F_port**
- C. N_port
- D. G_port

Answer: B

Explanation:

An F_port (Fabric port) is used on a Fibre Channel switch to connect N_ports (Node ports) on end devices like servers and storage arrays.

* N_port: On the compute system (HBA).

* F_port: On the switch, accepting N_port connections.

* E_port: For switch-to-switch ISL (Inter-Switch Link) connections.

* G_port: A generic port that can operate as either an F_port or an E_port (not the direct answer in this scenario).

NEW QUESTION # 40

Question:

A company is concerned about unauthorized access to its sensitive data. They want to implement security measures to ensure that only authorized users can access the data. Which goal of information security are they primarily addressing?

- A. Accountability
- **B. Confidentiality**
- C. Availability
- D. Integrity

Answer: B

Explanation:

Confidentiality ensures that sensitive data is only accessible to authorized users. This is a primary goal of information security, achieved by:

* Access controls (authentication, authorization)

* Encryption to protect data in transit and at rest

* Monitoring and auditing to detect unauthorized access

* Availability: Ensuring data/services are accessible when needed.

* Accountability: Tracking actions of users (audit trails).

* Integrity: Protecting data from unauthorized modification.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Security Controls and Principles.

NEW QUESTION # 41

Question:

What is the function of a continuous data protection (CDP) appliance?

- A. Stores all data that has changed from the time the replication session started
- B. Migrates deduplicated data from the source volume to the target volume during replication
- **C. Intercepts writes to the production volume and splits each write into two copies**
- D. Runs data protection software and manages replications within and across data centers

Answer: C

Explanation:

ACDP appliances sit in the data path and:

Intercept all writes to the production volume.

Splits each write into two copies: one goes to the production volume, the other to the replica volume.

Maintains a journal for point-in-time recovery.

* Option A/B/C: These are aspects of replication, but CDP's primary function is real-time interception and splitting of writes.

NEW QUESTION # 42

Question:

What is the first step in a machine learning process?

- A. Analyzing the data
- **B. Collecting the datasets**
- C. Training the model
- D. Selecting the type of learning

Answer: B

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets:Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data:Cleaning and exploring data for patterns.

3##Selecting learning type:Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model:Using the data to build predictive models.

Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: AI/ML Fundamentals.

NEW QUESTION # 43

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Avoids security risks that expose business data
- B. Reduces the cost of protecting data
- **C. Maximizes application and information availability**
- D. Reduces required maintenance time for IT resources

Answer: C

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

* Local failures(disk, server, or site outages)

* Natural disasters(floods, fires)

* Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.
