monitors incoming traffic and connections	Network

Answer:

Explanation:

ensures protection of individual devices	Endpoint
detects intrusion attempts	ensures protection of individual devices
monitors host for suspicious activity	monitors incoming traffic and connections
monitors incoming traffic and connections	Network
	detects intrusion attempts
	monitors host for suspicious activity

Endpoint
ensures protection of individual devices
monitors incoming traffic and connections
Network
detects intrusion attempts
monitors host for suspicious activity

NEW QUESTION # 46

What is the difference between statistical detection and rule-based detection models?

- A. Rule-based detection defines legitimate data of users over a period of time and statistical detection defines it on an IF/THEN basis
- B. Statistical detection defines legitimate data of users over a period of time and rule-based detection defines it on an IF/THEN basis
- C. Statistical detection involves the evaluation of an object on its intended actions before it executes that behavior
- D. Rule-based detection involves the collection of data in relation to the behavior of legitimate users over a period of time

Answer: B

Explanation:

Statistical detection involves collecting data over time to define what is considered normal behavior or legitimate data for users or

systems. It then uses statistical analysis to identify abnormal behavior that could indicate a security incident. Rule-based detection uses predefined rules or patterns that are based on known threats or vulnerabilities - it operates on an IF/THEN basis where if certain conditions are met then an alert is triggered.
