Microsoft GitHub Foundations Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which mechanisms can you use to personalize Codespaces for your account? (Choose two.)

- A. devcontainer
- B. settings sync
- C. IDE plug-ins
- D. dotfiles
- E. branch protections
- F. operating system

Answer: B,D

Explanation:

Personalizing GitHub Codespaces for your account

You can personalize GitHub Codespaces by using a dotfiles repository on GitHub or by using Settings Sync.

NEW QUESTION # 69

Which of the following is always true about the feature preview phases Alpha and Beta?

- A. Alpha features are documented.
- B. Alpha and Beta features offer Service Level Agreements (SLAs).
- **C. Alpha features are not available to the public.**
- D. Beta features provide technical support.

Answer: C

Explanation:

The terms Alpha and Beta are often used in software development to describe different stages of feature testing and release.

Alpha Features:

Option A is correct because Alpha features are typically in the early stages of development and are not available to the public. They are usually tested internally or by a limited audience.

Incorrect Options:

Option B is incorrect because Alpha features are often undocumented as they are in the early development phase.

Option C is incorrect because Alpha and Beta features usually do not offer Service Level Agreements (SLAs) due to their experimental nature.

Option D is incorrect because Beta features might offer limited support, but it is not guaranteed, especially compared to fully released features.

NEW QUESTION # 70

From the Organization settings, which restrictions can organization owners place on GitHub Actions usage? (Choose three.)

- A. Allow actions created by GitHub.
- **B. Allow actions that use self-hosted runners.**
- **C. Allow specified actions.**
- **D. Allow actions by Marketplace verified creators.**
- E. Allow an action to be run from a Codespace.

Answer: B,C,D

Explanation:

Organization owners on GitHub have control over how GitHub Actions can be used within their organization. They can enforce restrictions to ensure security and compliance with organizational policies.

Allow Actions That Use Self-Hosted Runners:

Option A is correct because organization owners can configure the usage of self-hosted runners, allowing greater control over the environment where actions are run.

Allow Specified Actions:

Option C is correct because organization owners can allow only specific actions to run, adding a layer of security by limiting actions to those that have been vetted.

Allow Actions by Marketplace Verified Creators:

Option D is correct because organization owners can choose to allow actions created by GitHub Marketplace verified creators, ensuring that only trusted actions are used.

NEW QUESTION # 71

What are the defining features of Git?

- A. Sequential version control, cloud-based hosting service, and being designed for collaboration on large projects
- B. Centralized version control, proprietary software, and being designed for small projects
- **C. Distributed version control, open source software, and being designed for handling projects of any size with efficiency**
- D. Low-cost local branching, convenient staging areas, multiple workflows, and being designed for managing small projects

Answer: C

Explanation:

Git is a widely-used version control system that has several defining features:

Distributed Version Control:

Git is a distributed version control system, meaning that every developer has a full copy of the entire repository, including its history, on their local machine. This enables greater flexibility, as work can be done offline and each user has access to the full project history.

Open Source Software:

Git is open-source, meaning its source code is freely available for use, modification, and distribution. This fosters a large community of users and contributors who continuously improve the software.

Efficiency with Large Projects:

Git is designed to handle projects of any size with speed and efficiency. It can manage large codebases and many contributors without significant performance degradation, making it suitable for everything from small personal projects to large, complex software systems.

NEW QUESTION # 72

Which version control system is GitHub built on top of?

- A. Subversion
- **B. Git**
- C. Perforce
- D. Mercurial

Answer: B

Explanation:

GitHub, launched in 2008, is a web-based platform built on top of Git.

Git is a version control system that tracks file changes and GitHub is a platform that allows developers to collaborate and store their code in the cloud. Think of it this way: Git is responsible for everything GitHub-related that happens locally on your computer.
