Our company has worked on the Cloud-Deployment-and-Operations study material for more than 10 years, and we are also in the leading position in the industry, we are famous for the quality and honesty. The pass rate of our company is also highly known in the field. If you fail to pass it after buying the Cloud-Deployment-and-Operations Exam Dumps, money back will be guaranteed for your lost or you will get another free Cloud-Deployment-and-Operations exam dumps. Our company will ensure the fundamental interests of our customers.

WGU Cloud-Deployment-and-Operations Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Automating Cloud Provisioning and Maintenance: This section of the exam measures skills of Cloud Operations engineers and covers the ability to automate provisioning tasks and ongoing maintenance activities. It emphasizes using automation tools to streamline cloud resource creation and lifecycle management. Students must demonstrate they can apply automation to maintain efficient cloud operations.

Topic 2	<ul style="list-style-type: none"> • Configuring Cloud Network Connectivity: This section of the exam measures skills of Cloud Engineers and covers network connectivity within AWS environments, including setup, troubleshooting, and corrective actions. Candidates must show they can manage cloud networking in a way that ensures reliable communication between systems and services.
Topic 3	<ul style="list-style-type: none"> • Implementing Cloud Security and Compliance: This section of the exam measures skills of Cloud Engineers and covers the use of AWS security tools to protect data and infrastructure. Candidates must demonstrate awareness of compliance needs and the ability to apply protective controls that align with industry and organizational standards.
Topic 4	<ul style="list-style-type: none"> • Cloud Service Deployment and Management: This section of the exam measures skills of Cloud Engineers and covers the technical knowledge required to deploy, manage, and operate cloud services. It focuses on understanding stability, scalability, backup processes, recovery methods, and general deployment practices. Candidates are expected to show they can handle provisioning, monitoring, and connectivity tasks needed to support cloud environments.

Cloud-Deployment-and-Operations Reliable Braindumps Ebook - Cloud-Deployment-and-Operations Exam Guide Materials

When you have adequately prepared for the WGU Cloud Deployment and Operations (Cloud-Deployment-and-Operations) questions, only then you become capable of passing the WGU exam. There is no purpose in attempting the WGU Cloud-Deployment-and-Operations certification exam if you have not prepared with PracticeMaterial's Free WGU Cloud-Deployment-and-Operations PDF Questions. It's time to get serious if you want to validate your abilities and earn the WGU Cloud-Deployment-and-Operations Certification. If you hope to pass the WGU Cloud Deployment and Operations exam on your first attempt, you must be studied with real Cloud-Deployment-and-Operations exam questions verified by WGU Cloud-Deployment-and-Operations.

WGU Cloud Deployment and Operations Sample Questions (Q56-Q61):

NEW QUESTION # 56

(Where does Patch Manager send compliance reports?)

- A. Route 53
- B. Elastic Block Store (EBS)
- C. OpsWorks
- **D. Simple Storage Service (S3)**

Answer: D

Explanation:

Patch Manager in AWS Systems Manager sends compliance reports to an Amazon S3 bucket, where they are stored for auditing and analysis. This allows administrators to track patch compliance status across EC2 instances and on-premises servers. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "Patch Manager compliance reports are delivered to an S3 bucket configured as a target, providing a centralized location for reviewing patch status and compliance data." OpsWorks, EBS, and Route 53 are not used for storing these reports.

NEW QUESTION # 57

(Which AWS monitoring feature is used to process events using AWS Lambda?)

- A. Targets
- B. Metrics
- **C. Rules**
- D. Logs

Answer: C

Explanation:

The AWS monitoring feature used to process events with AWS Lambda is CloudWatch Events, specifically through the use of rules. Rules define the events to monitor (e.g., based on event patterns) and specify targets like AWS Lambda functions to process those events. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, CloudWatch Events) explains that rules are the core component for event-driven architectures, enabling automation by linking events to Lambda for processing. Metrics, targets, and logs are related but not the primary feature for this function.

NEW QUESTION # 58

(Which AWS CloudFormation feature should be used to specify the AWS resources to be provisioned?)

- **A. Template**
- B. Exports
- C. StackSet
- D. Change set

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The CloudFormation template feature should be used to specify the AWS resources to be provisioned. A template is a JSON or YAML file that defines the resources (e.g., EC2 instances, S3 buckets) and their configurations for deployment. The WGU Cloud Deployment and Operations Study Guide (Section 5.3, CloudFormation Templates) states, "The template is the core component of CloudFormation, containing the resource specifications and properties that are provisioned when a stack is created." Change sets, exports, and stack sets serve different purposes (e.g., previewing changes, sharing outputs, managing multiple stacks).

NEW QUESTION # 59

(Which AWS monitoring feature is used to process events using AWS Lambda?)

- A. Targets
- B. Metrics
- **C. Rules**
- D. Logs

Answer: C

Explanation:

The AWS monitoring feature used to process events with AWS Lambda is CloudWatch Events, specifically through the use of rules. Rules define the events to monitor (e.g., based on event patterns) and specify targets like AWS Lambda functions to process those events. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, CloudWatch Events) explains that rules are the core component for event-driven architectures, enabling automation by linking events to Lambda for processing. Metrics, targets, and logs are related but not the primary feature for this function.

NEW QUESTION # 60

(Which type of support plan provides a technical account manager and full use of Trusted Advisor?)

- A. Business
- B. Developer
- **C. Enterprise**
- D. Standard

Answer: C

Explanation:

The Enterprise support plan provides a technical account manager (TAM) and full use of Trusted Advisor, offering proactive guidance and comprehensive access to all checks. This plan is designed for large-scale, mission-critical workloads. The WGU Cloud Deployment and Operations Study Guide (Section 6.4, AWS Support Plans) states, "The Enterprise support plan includes a

dedicated Technical Account Manager and full Trusted Advisor access, providing 24/7 support and proactive optimization recommendations." Developer, Standard, and Business plans offer limited or no TAM support and partial Trusted Advisor access.

NEW QUESTION # 61

• • • • •

You may be in a condition of changing a job, but having your own career is unbelievably hard. Then how to improve yourself and switch the impossible mission into possible is your priority. If you want to pass Cloud-Deployment-and-Operations exam, here come our Cloud-Deployment-and-Operations exam prep giving you a helping hand. Our company has the highly authoritative and experienced team to help you pass the Cloud-Deployment-and-Operations Exam. You can not only get the most helpful and valid Cloud-Deployment-and-Operations exam questions, but also you can get according suggestions on how to pass the Cloud-Deployment-and-Operations exam.
