

Google Realistic Professional-Cloud-DevOps-Engineer Exam Lab Questions 100% Pass Quiz

P.S. Free & New Professional-Cloud-DevOps-Engineer dumps are available on Google Drive shared by ExamsTorrent:
<https://drive.google.com/open?id=1rizhMZjYyirX95sG6VDUL39TyFU5vWTc>

The passing rate of our Professional-Cloud-DevOps-Engineer study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our study materials are selected strictly based on the real Professional-Cloud-DevOps-Engineer exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them. We also update frequently to guarantee that the client can get more learning Professional-Cloud-DevOps-Engineer resources and follow the trend of the times. So if you use our Professional-Cloud-DevOps-Engineer study materials you will pass the Professional-Cloud-DevOps-Engineer test with high success probability.

One of the best features of Google Professional-Cloud-DevOps-Engineer exam dumps is its discounted price. Our Google Professional-Cloud-DevOps-Engineer Exams prices are entirely affordable for everyone. We guarantee you that no one can beat us in terms of Professional-Cloud-DevOps-Engineer Exam Dumps prices. Get any Google Professional-Cloud-DevOps-Engineer exam dumps format and start preparation with confidence.

Testking Professional-Cloud-DevOps-Engineer Learning Materials - Exam Questions Professional-Cloud-DevOps-Engineer Vce

Computer brings more convenience, online access to information, published an article, watch movies, online remote virtual learning and other benefits. IT workers are becoming high-salary field in all over the world. ExamsTorrent releases latest and valid Professional-Cloud-DevOps-Engineer Exam preparations to help candidates clear exams certainly as Google certifications are outstanding and attractive. If you determine to take part in exams, our Professional-Cloud-DevOps-Engineer exam preparations will be a good helper.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q109-Q114):

NEW QUESTION # 109

You are developing the deployment and testing strategies for your CI/CD pipeline in Google Cloud You must be able to

- * Reduce the complexity of release deployments and minimize the duration of deployment rollbacks
- * Test real production traffic with a gradual increase in the number of affected users You want to select a deployment and testing strategy that meets your requirements What should you do?

- A. Rolling update deployment and A/B testing
- B. Rolling update deployment and shadow testing
- C. Blue/green deployment and canary testing
- D. Recreate deployment and canary testing

Answer: C

NEW QUESTION # 110

You need to define SLOs for a high-traffic web application. Customers are currently happy with the application performance and availability. Based on current measurement, the 90th percentile Of latency is 160 ms and the 95th percentile of latency is 300 ms over a 28-day window. What latency SLO should you publish?

- A. 90th percentile - 300 ms
95th percentile - 450 ms
- B. 90th percentile - 150 ms
95th percentile - 290 ms
- C. 90th percentile - 190 ms
95th percentile - 330 ms
- D. 90th percentile - 160 ms
95th percentile - 300 ms

Answer: D

Explanation:

a latency SLO is a service level objective that specifies a target level of responsiveness for a web application¹. A latency SLO can be expressed as a percentile of latency over a time window, such as the 90th percentile of latency over 28 days². A percentile of latency is the maximum amount of time that a given percentage of requests take to complete. For example, the 90th percentile of latency is the maximum amount of time that 90% of requests take to complete³.

To define a latency SLO, you need to consider the following factors²⁴:

The expectations and satisfaction of your customers. You want to set a latency SLO that reflects the level of performance that your customers are happy with and willing to pay for.

The current and historical measurements of your latency. You want to set a latency SLO that is based on data and realistic for your web application.

The trade-offs and costs of improving your latency. You want to set a latency SLO that balances the benefits of faster response times with the costs of engineering work, infrastructure, and complexity.

Based on these factors, the best option for defining a latency SLO for your web application is option B. Option B sets the latency SLO to match the current measurement of your latency, which means that you are meeting the expectations and satisfaction of your customers. Option B also sets a realistic and achievable target for your web application, which means that you do not need to invest extra resources or effort to improve your latency. Option B also aligns with the best practice of setting conservative SLOs, which means that you have some buffer or margin for error in case your latency fluctuates or degrades⁵.

NEW QUESTION # 111

You support a multi-region web service running on Google Kubernetes Engine (GKE) behind a Global HTTP'S Cloud Load Balancer (CLB). For legacy reasons, user requests first go through a third-party Content Delivery Network (CDN). which then routes traffic to the CLB. You have already implemented an availability Service Level Indicator (SLI) at the CLB level. However, you want to increase coverage in case of a potential load balancer misconfiguration. CDN failure, or other global networking catastrophe. Where should you measure this new SLI?

Choose 2 answers

- A. Metrics exported from the application servers
- B. A synthetic client that periodically sends simulated user requests
- C. GKE health checks for your application servers
- D. Instrumentation coded directly in the client
- E. Your application servers' logs

Answer: A,C

NEW QUESTION # 112

You built a serverless application by using Cloud Run and deployed the application to your production environment. You want to identify the resource utilization of the application for cost optimization. What should you do?

- A. Use Cloud Trace with distributed tracing to monitor the resource utilization of the application
- B. Use Cloud Ops to create logs-based metrics to monitor the resource utilization of the application
- C. Use Cloud Monitoring to monitor the container CPU and memory utilization of the application
- D. Use Cloud Profiler with Ops Agent to monitor the CPU and memory utilization of the application

Answer: A

Explanation:

The best option for giving developers the ability to test the latest revisions of the service before the service is exposed to customers is to run the `gcloud run deploy booking-engine --no-traffic --tag dev` command and use the `https://dev---booking-engine-abcdefa.run.app` URL for testing. The `gcloud run deploy` command is a command that deploys a new revision of your service or updates an existing service. By using the `--no-traffic` flag, you can prevent any traffic from being sent to the new revision. By using the `--tag` flag, you can assign a tag to the new revision, such as `dev`. This way, you can create a new revision of your service without affecting your customers. You can also use the tag-based URL (e.g., `https://dev---booking-engine-abcdefa.run.app`) to access and test the new revision.

NEW QUESTION # 113

Your organization uses a change advisory board (CAB) to approve all changes to an existing service. You want to revise this process to eliminate any negative impact on the software delivery performance. What should you do?

Choose 2 answers

- A. Batch changes into larger but less frequent software releases
- B. Move to a peer-review based process for individual changes that is enforced at code check-in time and supported by automated tests
- C. Let developers merge their own changes but ensure that the team's deployment platform can roll back changes if any issues are discovered
- D. Replace the CAB with a senior manager to ensure continuous oversight from development to deployment
- E. Ensure that the team's development platform enables developers to get fast feedback on the impact of their changes

Answer: B,E

Explanation:

Explanation

A change advisory board (CAB) is a traditional way of approving changes to a service, but it can slow down the software delivery performance and introduce bottlenecks. A better way to improve the speed and quality of changes is to use a peer-review based process for individual changes that is enforced at code check-in time and supported by automated tests. This way, developers can get fast feedback on the impact of their changes and catch any errors or bugs before they reach production. Additionally, the team's development platform should enable developers to get fast feedback on the impact of their changes, such as using Cloud Code, Cloud Build, or Cloud Debugger.

NEW QUESTION # 114

.....

By earning the Google Professional-Cloud-DevOps-Engineer certification, you may stop worrying about the bad things that might happen and instead concentrate on the advantages of making this decision and developing new skills that will increase your chances of landing your ideal job. You should start the preparations for the Google Professional-Cloud-DevOps-Engineer Certification Exam to improve your knowledge.

Testking Professional-Cloud-DevOps-Engineer Learning Materials: <https://www.examstorrent.com/Professional-Cloud-DevOps-Engineer-exam-dumps-torrent.html>

If you choose us, there is no necessary for you to worry about this problem, because we have the skilled specialists to compile as well check the Professional-Cloud-DevOps-Engineer exam cram, which can ensure the right answer and the accuracy. We would like to benefit our customers from different countries who decide to choose our Professional-Cloud-DevOps-Engineer study guide in the long run, so we cooperation with the leading experts in the field to renew and update our Professional-Cloud-DevOps-Engineer

learning materials, Google Professional-Cloud-DevOps-Engineer Exam Lab Questions The Test Engine is downloadable, installed on your PC.

It enables developers to convert common to-do items prefixes to Professional-Cloud-DevOps-Engineer automatically built compiler warnings via regular expression matching. What Is an Actuator, If you choose us, there is no necessary for you to worry about this problem, because we have the skilled specialists to compile as well check the Professional-Cloud-DevOps-Engineer Exam Cram, which can ensure the right answer and the accuracy.

Prepare for the Google Professional-Cloud-DevOps-Engineer Exam with ExamsTorrent Verified Pdf Questions

We would like to benefit our customers from different countries who decide to choose our Professional-Cloud-DevOps-Engineer study guide in the long run, so we cooperation with the leading experts in the field to renew and update our Professional-Cloud-DevOps-Engineer learning materials.

The Test Engine is downloadable, installed on your PC, First of all, our operation system will record your information automatically after purchasing Professional-Cloud-DevOps-Engineer study materials, then the account details will be encrypted immediately in order to protect Professional-Cloud-DevOps-Engineer Exam Lab Questions privacy of our customers by our operation system, we can ensure you that your information will never be leaked out.
